P. HINKLE'S PATENT CENTRIFUGAL ROLLER QUARTZ MILL

THIS cut shows the **New Hinkle Centrifugal Quartz Mill**, with plates as slummer. This is the only mill made that needs no oil for the inside working parts, as it is thoroughly lubricated with water, supplied from a circular tank, which is connected to the roller spindles, slides and drips by rubber hose. By this means oil cannot interfere with perfect amalgamation. Other features of superiority are: Simplicity of construction; the free discharge of pulp; the wearing parts are easily replaced at a small cost. The small amount of power required to run the mill will recommend it to all practical mill men, as well as the small cost of erection and transportation of mill to the mine. 5-foot mill weighs 9,000 lbs.; pulverizers 38 in. diam.; run, 80 to 90 rev. per minute, with a capacity of 20 tons per day. This size mill costs **$1,500.** With Silver Plates, Slummer and Ore Feeder, **$1,800.**

H. P. GREGORY & CO.

SOLE AGENTS FOR PACIFIC COAST,

Corner Fremont and Mission Streets, San Francisco, Cal.

P. HINKLE'S PATENT ORE FEEDER.

Positive Feed and Ready Adjustment.

IN this **Improved Ore Feeder** the falling tappet of the mill causes a backward movement of the feeding-tray. As the ore comes from the hopper on to the tray, a transverse bar prevents the ore moving backward, and a small portion of the ore is thus forced off the front edge of the feeding-tray into the battery. The amount of movement of the feeding tray may be regulated, thus regulating the feed of ore. This feeder can be arranged for roller mill or stamps. It is strong and durable, and feeds wet or dry ore in regular quantities.

Price, - - - $150.00

"Hold It to His Nose."

An English medical man who was sent out to Bulgaria to look after the health of English workmen on a railway had occasion to take a few stitches in the eyelid of his horse. To secure quiet on the part of his dumb patient he proposed to administer chloroform, and called upon one of the engineers to assist him. The result of the experiment is told by the assistant:

"It was settled that we should take the horse into a shed thickly strewn with hay, and that I should administer the chloroform. This was quickly done, or rather commenced. The chloroform was poured on a thick cloth, and I held it to the horse's nose. At first he objected and tossed his head, but presently a contented look came over his face and he stood stock still.

"At this I said, 'It's all right, doctor; get ready, he will soon be off.' To which the doctor replied, 'I am rather astonished that he has not gone through the excited stage.'

"Just as he said this the horse gave a sudden plunge which knocked me over on my back in the hay, and then he commenced the most eccentric unhorse-like proceedings. He sat up on his tail and tried to reach the roof with his feet. Failing in this he jumped up and rushed into the corner, where he did his best again and again to run up the wall, tumbling over on his back at each attempt. Then he tried to put his head through between both his front and his hind legs, and so went head over heels forward.

"I bolted, but will it be believed that the unfeeling doctor held the door against me, and only answered to my entreaties to be let out, 'Hold it to his nose! hold it to his nose! Look sharp and hold it to his nose!' and when at last I succeeded in bursting the door open and making my escape I was greeted with contemptuous looks and words!

"A Rarey might have liked the situation. I am not a Rarey, and was very cautious how I went up to the beast, even after he had got over his flurry and stood stock still, looking very much astonished, as well he might."—Youth's Companion.

The Original Buffalo Bill.

There is probably no better known name throughout the entire length and breadth of this country than that of Buffalo Bill, and there are but few who do not know that William F. Cody is the bearer of the title. Mr. Cody, however, is not the original Buffalo Bill. There is nothing underhanded nor illegitimate in his bearing it. He is fully entitled to it, but, for all that, he comes by it second handed. The original Buffalo Bill is now living, an aged, wealthy, prominent and highly respected citizen and the president of a savings bank at Wichita, Kan. His name is William Matthewson. He is high up in the order of Oddfellows.

Years ago Mr. Matthewson was a bold frontiersman on the plains, engaged in hunting and trapping for a living. He supplied the forts in Kansas and Nebraska with buffalo, and his success in this work was so great that he was given the title of Buffalo Bill. During this time he engaged a boy to work for him, and the lad was so diligent and faithful that he remained in Matthewson's employ until the latter quit the business to settle down to a more quiet life. As a reward the employer turned over the hunting contracts to the employe, who then followed in his late master's footsteps. That he was successful, that he earned honor, fame and wealth for himself cannot be denied when it is told that his name is William F. Cody. With the business rights he was given the title his former employer had borne. The world knows he has kept it bright and that neither stain nor tarnish has touched it.—Chicago Herald.

The Winds of the Mediterranean.

The winds of this sea, though generally regular and periodical, have local characteristics which give rise to various names: "The Birazones of the southeast coast of Spain; the Vent de Bize, or Mistral, of the southern French coast; the Raffiche of Corsica and other mountainous islands; the Gregale of Sardinia and Malta; the Saffanto and Bora of the Adriatic; the Tramontana, generally over the Levant, and the Levanters and Sirocco of the whole Mediterranean." In strong contrast to the frequent blasts of the well known Sirocco are the calms of this deep sea, the bonaccia of the Italian mariner, which in the days before the advent of steam compelled a loitering and weary voyage.—J. N. Hallock in Christian at Work.

Meaning of the Word "Limited."

A subscriber asks for an explanation of the word "limited," which frequently follows the name of a corporation, as the "Sunrise Blacking company, limited," or "Smith & Jones, limited." In the last case, as in the first, the concern is a corporation, with shareholders, not one of whom, possibly, is a Smith or a Jones.

The old principle of corporations created by legislative act was that the entire property of every stockholder was liable for the whole debts of the company, as the whole property of every member of a general partnership is still liable for the debts of the firm.

But this system made every shareholder responsible for bad management of which he might not be guilty, and deterred wealthy men from becoming interested in the shares of corporations. To remove this objection the principle of limited liability was introduced, and in order to notify the public that only the separate property of the corporation was liable for the debts of the corporation the English law requires that the word "limited" shall be used in every case by the company.

Most American corporations are constituted on the principle of limited liability, but few, if any, of the states enjoin companies to append the word limited to their corporate titles. The matter is so well understood in this country, indeed, that it is not necessary.

The most noteworthy exception to the general rule is the case of the national banks, and even in this instance liability is limited to an amount equal to the par value of the shares. That is, if a national bank fails, each stockholder may not only lose what he has invested, but $100 more for each share of stocks he holds, if so much is necessary to pay the debts of the bank.

Until within a few years all the Scottish banks were organized with unlimited liability, and when, eight or ten years ago, a Glasgow bank failed, disastrously, there were cases of men who only owned a share or two, valued before the failure at not much more than a hundred dollars each, who were assessed thousands of pounds sterling, to meet the debts of the bank. Since that time the Scottish banks have been allowed to reorganize on a basis of limited liability.—Youth's Companion.

To Tempt the Theatre Goers.

The midnight candy store is a new thing in upper Broadway. It is open for business all day long, of course, but the particular trade which it is open to catch is that of theatrical audiences. It is situated in a neighborhood of theatres, whose dispersing people are apt to see its glare of electric lights and its gorgeous front of illuminated red glass. The standard summer joke of the village newspaper, based on the difficulty experienced by the fellows in getting their girls past the ice cream saloon, is here adapted to the cold weather season in New York. A package of candy after the play is a sweet boon to women of every degree, whether from the proscenium box or the topmost gallery, and the proprietor of this place doesn't mean that any couple shall walk past without paying attention to it.

But the striking character of the exterior is exceeded inside, where a complement of very brightly red haired girls are on duty from 10 o'clock at night until 1. Whatever differences of opinion may arise as to the beauty of their aggressive hair, their faces are all pleasant and they form a curious exhibition. There is no naughtiness about it. They merely sell candy, smilingly, but demurely, and their value lies in their attractiveness to their own sex, not to the other. The candy merchant calculates that they will make women talk about them, and thus advertise his midnight wares, which consist of candies delivered directly from the caldrons during the time of dispersals of theatre audiences.—New York Sun.

Shirt for an Ensign.

When Sultan Saladin died he commanded that no ceremony should be used but this: A priest was to carry his shirt on a lance and say, "Saladin, the conqueror of the east, carries nothing with him of all his wealth and greatness save a shirt for his shroud and ensign."—Dry Goods Chronicle.

Frank Criticism.

Fuzzle—I say, old fellow, how do yer like me suit? Bought it at Bangs' misfit parlors. Great shape, isn't it?

Muzzle—It's the most successful case of misfit I ever saw.—Clothier and Furnisher.

PEARLS IN OYSTERS.

Formation of the Precious Gem in the Shell Fish.

PLACES WHERE THE BIVALVES THRIVE.

Interesting Facts About the Business of Gathering Pearls.

To picture the sedate and matter of fact oyster as rising to the surface of the ocean to drink in the dew of heaven may well be regarded as a stretch of the imagination worthy of the most fanciful weaver of romances. Yet such was stated by early writers to be the origin of the pearl, that gem which is deemed worthy to deck the brow of royalty, which adorns fair women, which is the delight of the treasure hunter and which in all ages has been the symbol of beauty, purity and worth.

This pretty conceit, however, is brushed away by the stern realities of sober fact. The keen eye of science has discovered that the birth of a pearl is anything but a poetical affair. It is due to an accident, and to one of those provisions of nature by which every living creature resists for foreign attack and seeks to protect itself from injury. The oyster pearl springs into existence in two different ways. The first is by the introduction into the animal of a foreign substance. In some unguarded moment the oyster may permit a minute grain of sand to slip into its domicile and lodge between the flesh and the shell. The oyster is powerless to expel the intruding substance, which immediately becomes a source of irritation.

There is but one remedy. The animal begins to cover the grain of sand with a coat of membrane, followed by a layer of calcareous matter called nacre. This is identical with mother-of-pearl, that beautiful lining of the shell which reflects all the colors of the rainbow as well as the most delicate and subtle tints. Nacre is constantly exuded from the body of the oyster, the cockle, the nautilus, the snail and other animals of the mollusk order, and forms their outer covering, hard or soft, thick or thin, according to the protection demanded by their surroundings. Around the intruding grain of sand which has been mentioned accumulate alternate layers of membrane and nacre until a pearl is formed.

THE MOST VALUED GEMS.

These pearls, however, are not the valuable gems of commerce, because, in the first place, they preserve the form of the grain of sand, and hence are irregular in shape, and in the second place, they frequently adhere to the shell and consequently present one rough side.

The perfect pearl is found loose in the interior of the fish, and has its beginning in an animal germ. The oyster annually produces a number of eggs, which, as soon as they develop into diminutive animals, are thrown out of the mother. Occasionally, however, an egg proves abortive and remains behind. It is almost microscopic in size, and is inclosed in a tiny capsule. This capsule now becomes to all intents and purposes a foreign substance. But it has certain powers akin to those of the present, one of which is that of manufacturing, throwing out and gathering around itself nacre. The nacre completely envelops it, and the germ of the animal is soon incased in a beautiful prison, usually spherical in form, but sometimes pear shaped. This is the true pearl.

The most famous pearl fisheries in the world are near the coasts of Ceylon, Japan, Java and Sumatra and in the Persian gulf, although pearls in limited quantities are obtained in the streams of various countries.

Before the divers begin their work there are blessings and magic spells from priests and sorcerers to drive away the sharks and bring good luck. These incantations are of course roundly paid for. The boats start out late at night, so that operations may begin at daybreak. The divers have small instruments for compressing the nostrils and beeswax to stop the apertures in their ears. Each one holds a block of stone between his feet to aid his descent. Leaping from the boat and plunging beneath the waves, the divers reach the bottom, where they run about swiftly and fill their bags with oysters as quickly as possible. When one is ready to rise he gives a signal and is drawn back to his boat by a rope.

Divers cannot remain in the water over a minute on the average, while two minutes taxes the most expert. A very few who have stayed under four or five minutes have won great reputations for their extraordinary endurance.

The occupation is injurious to the health, as it requires a tremendous amount of exertion. Divers are short lived, subject to various diseases and have been known to expire suddenly upon reaching the surface of the water.

One peculiarity of pearls is that, unlike other precious gems, they are liable to decay. Occasionally a valuable pearl changes color, seems to be attacked with a deadly disease and crumbles into dust. Such is reputed to have been the fate of the most magnificent specimen ever known.

Passing through successive hands it finally became the property of a Russian merchant and found a possessor who knew its immense value and prized it accordingly. He kept it carefully in a secluded room of his magnificent mansion, apart from all other of his treasures. It was the wonder and admiration of his favored friends who were permitted to look at it. The merchant finally became involved in a political conspiracy and fled to Paris, taking his one great treasure with him. He kept it hidden for a time, but at last consented to show it to some distinguished lovers of precious stones. But when he opened the casket he fell back in dismay and staggered as though stricken with death. The gem had begun to change color. A fatal disease had attacked it. It was soon a worthless heap of white powder and the once wealthy merchant was a pauper.—Galveston News.

A "CUSTOM" OF DAHOMEY.

Sickening Sights for the Eyes of Civilized Man—A Serenade.

Evans informed me that in a few days one of the "customs," as the Dahomians call them, was to come off in the court yard of the palace, and that I could witness it if I chose. I did choose, but I wished afterward that I had not. These customs, which have existed as long as Dahomey has—they claim a thousand years—are of various kinds, and with names. The one I was to witness was called "Throwing of the Presents," others, "Watering the King's Graves," "The Feast of the Troubadours," "The Day of the King," "The Milking of the Palm," etc.

The day came off. Evans, with a shudder, declined to attend. He had seen it the year before. In the center of the court yard a platform was erected, hung with silks, velvets and flags, including that of Dahomey—a white ground, with a figure in black holding aloft a decapitated head in one hand and a cimiter in the other. On this platform stood the king, surrounded by his nobles, among whom I had a prominent seat, while below struggled a mass of 50,000 or more people, kept in some order by the woman guard.

The affair began by the king personally throwing into a sliding trench various packages of goods, consisting of cottons, clothes and cloths, knives, muskets, pipes and tobacco, all of which were fought fiercely for by the crowd below. Then came the grand point—the slaughter.

The victims were brought forth lashed into boat shaped baskets, in a sitting position, with knees drawn up to the chin, and lifted into the slide, from which they went down to the crowd below. Then there came a horrible scramble. Thousands with long and bright knives threw themselves on the victim and in a moment he was hacked to pieces, as well as were some of his hackers, the victor being the one who came off with the head. This was kept up for three hours, the number killed amounting to about 200, until the crowd below was reeking and smeared with blood. A more horrible sight was never witnessed, and it did not lessen the horror with me to be told that this is not a mere useless slaughter, as civilized nations suppose, but a day of execution, the decapitated being criminals, traitors and prisoners of war, who have been "offensive political partisans." It is the highest holiday in the year, and the only one where much slaughtering is done, and there is no doubt, according to Mr. Evans, that the king himself wishes to abolish that part of it, but he dares not.

That night, perhaps as a soother to my nerves, the king gave us a serenade by his own private band. I was awakened about midnight by a noise that I can compare to nothing but a thunderstorm in scales. They ran from high to low, and got terribly mixed in the middle. It was not really unpleasant, but, like the chiming of bells, should be heard at a distance—the greater the distance the better. I sprang to the window, to find that this band consisted of twenty-two men, each with a log, or piece of wood, the largest so heavy that it took four men to carry it. These were set, one end on the ground, the other supported by a wood trestle, and beaten on the high end with wood hammers, of all sizes, from the hand hammer to a sledge, each stick or log emitting its sound, but no distinguishable air resulting.—J. W. Watson in North American Review.

The Sultan at Prayer.

The sultan stands erect with his face to the east and his feet on his praying carpet, and, placing the thumb of each hand under each ear, he spreads his hands like wings, lifting his ears upward as if to catch any sound from heaven, and with his hands in this position must turn first to the right and spit, then to the left, and then, dropping his hands to his side, hold them rigid while he bends his knee and then his whole body forward from his knees until his forehead touches the floor three times. He repeats his prayer in this position, and gets upon his feet again without touching his hands to the floor, and again makes wings of his ears, and again spits right and left, and his prayer is over. Every Turk believes that he has two attendant spirits, one good and one evil, and as he is not sure which side the emissary of Satan has pre-empted he spits at both to make sure.—Charleston News and Courier.

Individuality of Razors.

Barbers declare that razors are even more capricious than fickle woman, and the gentlemen who shave themselves recognize the individuality or idiosyncrasy of razors. Some razors need a rest after using, and no amount of strapping will make them efficient unless they are humored, while others will be the better for constant use. Some razors will be better if strapped immediately after using; others require the edge to be put on before application. Many gentlemen who shave themselves have a set of razors—one for each day in the week. The more expensive the razor the more capricious is the finer tempered steel blade. As a rule a new razor is not as profitable as a well tempered old one, and barbers declare that the breaking in of a razor is a matter of skill as important as the training of a colt. Once ascertained the temper of a razor can always be relied on.—New York Times.

Monkeys as Opium Eaters.

Dr. Jammers, in a memoir sent to the Academie des Sciences, states that monkeys, unlike other animals, unless it is the human animal, readily acquire the habit of taking morphia. When monkeys live with opium smokers, as they do in eastern countries, where the habit is more prevalent than elsewhere, and become accustomed to the medicated atmosphere, they acquire a taste for the pipe. One particular monkey, it is said, would wait for his master to lay down his pipe and would then take it up and smoke what remained. If not allowed to do so for several days it would fall into a state of depression and inactivity which would disappear as soon as it was allowed to "hit the pipe."—Pall Mall Gazette.

No More Express Robberies.

I know that the time is coming when there will be no more express robberies in this country. The time has already come when the detective is sharper and shrewder than the expert cracksman, burglar and embezzler and thief, and they cannot escape. This has been demonstrated quite frequently of late, and it naturally follows that such robberies will become an unprofitable business.—Globe-Democrat.

Corliss, the great engine builder, made no attempt at invention until he was 35 years old. His first effort in this line was a machine for sewing shoes, which was a failure.

In Alsace-Lorraine the velocipede is universally used by the foot service orderlies.

FEEDING A SNAKE.

How Rabbits are Crushed and Swallowed.

BOA CONSTRICTOR'S APPETIZING MEAL.

No Visible Struggle on the Part of the Rabbit.

Three corpulent rabbits of Belgian breed were caged in a soap box quietly awaiting their fate. They were the meal for which the snake was anxiously awaiting. He had not tasted meat in four months and his voracious maw yawned like a bottomless pit for the unfortunate trio in the soap box. Manager Bell appeared and drew forth one of the rabbits. After stroking "bunny" on the back for a moment he opened the door to the snake's den and thrust him in. The huge boa had coiled himself up in a corner, but at once roused himself for action. He was fully twelve feet long, and having recently shed his winter coat his skin glistened and shone like satin. He raised his head a foot or so from the floor and viewed the first course of his quadriannual meal.

The rabbit showed no signs of fear, but rather seemed to enjoy his new quarters. The snake slowly lowered his head and cautiously began to stretch himself along the side of the den. He never once took his eyes off the rabbit, which was still unconscious of his danger. Suddenly the rabbit began to act strangely and to cut all sorts of ridiculous capers. He would leap back and forth over the snake and then rub up against it, and appeared to be fascinated. Slowly and stealthily the snake turned his head about until it was within a foot of the rabbit's haunches. Then, quick as a flash, he darted forward, seized the rabbit in his mouth and in another instant there was nothing to be seen of the little animal save the tips of his ears, which protruded from between the folds of the snake.

The huge serpent then raised his head full two feet from the floor, darted out his forked tongue and hissed horribly at the motley group watching him. If there was any struggle on the part of the rabbit it was not visible. The snake had him in his awful coils. Then the coils slowly, but with a strength which was terrible to look at, began to tighten till every bone in the poor rabbit's body must have been broken. This done the coils relaxed, and the limp, lifeless body of the sportive rabbit of a few moments before lay ready to be swallowed. First the serpent nosed his victim all over. The eyeballs of the dead rabbit were protruding from their sockets, and by way of beginning the boa licked them with his tongue. Once more he coiled about his victim, leaving its head and shoulders free. Then he opened his monstrous jaws and, taking "bunny's" head therein, began to swallow. Soon the head and shoulders were out of sight, and in less than fifteen minutes the hind legs followed.—Chicago Inter-Ocean.

The Profits of Authorship.

I caught one of our best known authors in a confidential mood recently, and his comments on the revenue of authorship, which he gave me permission afterward to print, carry interest with them. I may add that the name of this author is one of the most widely known in American literature today. "Seven years ago I chose between law and literature. I had every opportunity to succeed at the bar, for through hard study and my connections a lucrative practice seemed open to me. But I turned to authorship. Today I am what the world calls a successful author. My last novel was bid for by three publishers, and my royalties, I am told by my publishers, are higher than those of the majority of their writers. I have the pleasure of hearing my books and name hawked on the trains when I am traveling, the newspapers give me from a quarter of a column to a column and a half reviews.

"But what has literature brought me in money? Let me open my vest pocket to you. Here is my actual revenue for 1889, and includes, as you see, royalties on six of my novels, magazine articles, etc., and everything is collected. Here is the total, $2,170.40. Compare these actual figures to the paragraph recently circulated in which I am reputed to earn $10,000 from my pen. Is it any wonder that the unsophisticated enter literature with false hopes? Yes, print these facts if you wish; only, of course, withhold my name and identity." I reproduce here the facts and figures as they were given to me. I only wish it were possible, for the sake of those who think that literature is a bed of roses, to give this author's name.—New York Letter.

Struck by Lightning.

Sailors are proverbial for their big yarns, but they can't get much ahead of river men. The other day Capt. J. D. Parker got hold of Capt. Gibson, and he said:

"Dave, you recollect when I was mate on the Yazoo and that streak of lightning struck me as I stood near the jack staff, in that terrible storm, and you all thought I was dead for sure?"

"Oh, yes, very well; but where did the lightning go to, anyhow?"

"Why, it went right down into my boot."

"And you never were hurt?"

"No, sir, not a bit. I just took my boot off and poured the lightning out on the deck."

And the two worthies went to look at the weather map.—Cincinnati Enquirer.

The orator secures but a poor success who makes people exclaim, "What a fine speech!" but he is entirely successful who persuades them to his thinking. That is what Fenelon meant in his "Dialogues of the Dead" when he represents Demosthenes as saying to Cicero, "Thou madest people say, 'How well he speaks!' but I made them say, 'Let us march against Philip!'" That an orator will create no impression who does not seem to feel his words is a certainty.—Austin Fryers in Once a Week.

Some German Students.

One mark of German brutality I saw with indignation and disgust. Three gross looking students, with their heavy faces gashed with saber cuts, embarked on the Rhine steamer at Bonn. Bardolph himself would have looked a decent fellow in the presence of the leader of the set, who was swollen with beer and freshly scarred on his hideous face. One of his comrades had cloths bound round his neck and head. They at once called for beer, and sat down to play at cards. Their insolent faces showed how proud they were of their brutal, stupid persons. An American gentleman who was standing by me, looking at the grossest of the three, said that if such a fellow were at a university in the states they would stick pins in him. I should have been content with getting him well into the middle of a "scrimmage" at football in the parks at Oxford.—Macmillan's Magazine.

When Men Buy Candy.

The writer was talking to Clerk Peacock at the Hoffman house the other day when a messenger boy came to the desk and left a package for one of the guests. The package was from a well known confectioner. Mr. Peacock gave a receipt for the package, and when the boy had gone said: "Now, I know that the gentleman for whom that was left is going away. I can always tell when a man is going away by those packages. It is a sure sign. Men don't buy candy for themselves, and when they get it to take away with them they always wait until just before they go. That guest's room will be vacant probably this evening, but he is certain not to remain after tonight."—New York Letter.

English Worship of Royalty.

It is only natural that there should be great competition among the London hotel keepers for the royalists who visit the metropolis during the season. No one knows better than the landlord of one of these fashionable hotels what fearful snobs the well-to-do English man and woman of the middle class are. They would black the boots of a king every morning, and pay handsomely for the privilege. The king of Sweden is stopping at the Grand hotel, and, whether he is in or out, there is always a crowd of snobs hanging about the door. They gloat over the coroneted carriages which drive up to the door and worship the very calves of the footman who opens the doors and carry the bouquets. It is a sickening sight.—Pall Mall Gazette.

The Great Climatic Cycle.

According to the calculations of M. Adolphe d'Assier, based on the assumption that the coincidence of the earth's perihelion passage with the summer solstice every 21,000 years marks the regular recurrence of a northern glacial period, the last glacial period, culminated in 9250 B. C., the alternating period of greatest northern warmth occurred A. D. 1250, and the ice period now approaching will reach its greatest height A. D. 11,750. Evidence of the slow cooling during the past 600 years is seen in the changes recorded in the northern limits of the growth and ripening of certain fruits.—Arkansaw Traveler.

Influenced by Environment.

Many a man is saved from the company of the defiled and the defiling by the sweetness and light of a cheery home. Many a woman, in the possession of a house which invites the actualization of her womanly concepts of the amenities of decorative art, finds the cares of the household no drudgery and her work lightened and brightened by the cheerfulness of her environment. Human nature is always more or less influenced by environment, and the house which one builds and lives in has much to do in shaping his character and disposition.—Pioneer Press.

A Steam Catamaran.

A novel craft is being built in Montreal. It is a steam catamaran, each of the cigar shaped hulls being of steel, sixty-five feet long, and built in two compartments, one being for water ballast and the other for coal oil, which will be used for fuel. Two vertical engines will furnish the power to two propellers, which are so arranged that they will lift themselves out of the way when the hulls strike floating ice or other obstacles. The boat can be taken apart and packed on a ship, and is intended for whale and walrus hunting in the Artic regions. It will carry a gading gun and a powerful electric battery.—Cleveland Leader.

Coffee Not Injurious.

"It is nonsense," said a chemist, "to say that coffee is injurious on account of the cafeine in it. Cafeine is an alkaloid, which, taken in larger doses, would produce nervous troubles and other serious consequences, but is present in coffee in such infinitesimal quantities that it is perfectly harmless; on the contrary, it is to cafeine that coffee owes its tonic properties. If coffee is injurious it works very slowly, for thousands of people who use it to excess live to a good old age. They say Voltaire drank forty-eight glasses of it a day."—Philadelphia Times.

Keeping Him in Tow.

"Edward, dear, I hardly know my own heart," said the girl, softly, "and you must give me a little time to think it all over."

"Will you want very much time?" he asked, tenderly and hopefully. "When may I come for an answer?"

In a low, sweet voice, the girl replied: "At the end of the season." And she arose languidly, adjusted her tournure with the gentle tap indicative of noble birth, and moved gracefully away.—Life.

Wanted Somebody to Be Sorry.

Dying Benedict—I bequeath every dollar to my wife. Have you got that down?

Lawyer—Yes.

Dying Benedict—On condition that she marries within a year.

Lawyer—But why insist upon that?

Dying Benedict—Because I want somebody to be sorry that I died.—Harper's Bazar.

Well Up in His Lesson.

Professor (of class in journalism)—What is the difference between an editorial and an editorial paragraph?

Student—An editorial is of the same nature as an editorial paragraph, but is larger, and doesn't have as much to say.—Harper's Bazar.

ABOUT MAIL CARRIERS.

Manner of Collecting and Delivering Letters.

BITTER MEMORIES THEIR ERRANDS EVOKE

The Lights and Shadows of Life Distinctly Marked.

What family jars has the letter carrier witnessed; of what romantic stories has he been the bearer! Many little missives has he carried to the love sick maiden, which she has tenderly placed beneath her pillow at night, to sleep and to dream on. Then again what bitter memories have some of his errands evoked! What aching hearts have longed for absent loved ones, for some message that would tell of their existence, and when death rapped at the door the letter carrier was the first to bear the announcement.

These were the thoughts that suggested themselves to a reporter the other day as he contemplated "one of the best" hurrying along from door to door of a populous tenement district. The shrill whistle sounded at frequent intervals denoted his coming, and from window and basement dozens of heads protruded and asked the one all absorbing question, "Anything for me?" It was amusing to see their different expressions as they received the little envelopes. Some were enraptured and kissed the paper passionately, while others frowned and glanced anxiously at the bearer. Perhaps some creditor demanded payment for an overdue bill, or perhaps the scrawl meant even more.

"You would like to know just what kind of life this is?" remarked a carrier. "Well, it is not quite as rosy at it appears. It is getting better, however, every year, and now that we are about to participate in the benefits of the eight hour law work will be more pleasant."

The reporter had followed the carrier from block to block until every letter had been delivered. Then, as he had a few mements to spare, the gray coated official sat down to tell his story.

"I don't know of any business where we see more of human life than ours," he commenced. "The lights and shadows of life are pretty distinctly marked and we see them both. Sometimes we feel just as much pleasure in delivering a letter as the receiver in getting it. Sometimes when an ominous black bordered envelope falls into our hands we are sorry that we have to deliver it. Just what hours we will have to work after the rearrangement I do not know," he said. "At present our duties are pretty onerous. In the branch offices collectors have to report as early as 4:40 o'clock in the morning, or five minutes before the regular time for starting out. Forty-five minutes are then consumed in collecting from the various boxes, after which we return to the station with the mail. Then we start to face up.

"You don't know what facing up means? Well, that is what we call sorting our mail and getting it in order for our route. Facing up takes all the time up to 6 o'clock. Then we start out and deliver the letters. We make a prompt return to the office. Collections have in the meantime been made and again we start facing up.

"Every trip is but a repetition of the other. We make them hourly, and are kept constantly on the move until 11 o'clock. Then we swing. This is what we call taking a rest. In other words, there is no work for us to do until 4 o'clock in the afternoon. Then we come on again and work until the darkness of evening has fallen over the city.

"You want to know what we see on the route?" and the letter carrier dusted a few grains of cigar ashes from his bag. "Well, it is funny just what we do see; then again it is sad. The saddest of all my experience occurred one day when I delivered a letter to an old man who lived alone in a dilapidated house on Park row. It was a mourning letter, and as I handed it to him the old man's fingers trembled. He tore it open convulsively, and as he read the lines he tottered and fell into my arms. The letter was from his daughter, who lived with her brothers in a fashionable house up town. It stated that her mother, the old man's wife, was dead and would be buried that afternoon. The girl also warned her father not to attend the funeral or there would be a scene, as his own sons would not permit him there.

"He wept as he told me his story. There had been a quarrel, and he had been driven from home. He had never darkened it up to that time. That day my duties brought me around Grace church. I saw the funeral cortege, but what attracted me most was the figure of the old man outside on the sidewalk. His lips quivered with emotion as he saw the casket that contained the remains of his wife, but he dared not approach. He held a daisy in his hand, perhaps in remembrance of other and happier days, and he was still turning it idly when I passed along.

"Yes, it is a funny kind of life, half sunshine, half clouds. We have our own troubles to worry us as well as other people's. We meet all nationalities, and hear all kinds of languages spoken. We get letters with writing such as none could understand; we have to examine and look out for log letters, and are held responsible for any error. Log letters are undirected ones. We are supposed to know all our route, and see that it gets to its proper destination. Well, it is time for me to start, so good-by," and the letter carrier walked briskly away.—New York Star.

Stoned a Bear to Death.

J. Sweetland tells us a funny story of how five Siwashes got away with a bear at his camp just across the bay from here. Mr. Bruin intruded himself in among the pots and kettles, picking out a dainty meal. While so engaged he attracted the attention of a Siwash, who at once called his mates to his help. The ground is pretty rocky around the camp, and there are plenty of loose stones ready to hand. They at once fell on the bear, like the Jews of old did on Stephen, and stoned him. He would at first endeavor to follow his assailant, but, being surrounded, a stone in the rear would turn him.—Union City Tribune.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY JANUARY 2 1891

County Official Paper.

It is reported from Washington that there is very little probability of Congress taking any action in regard to silver. Every day brings news of fresh financial disasters all over the country. Long established and first class banking and commercial houses are every day going down in ruin. Many of these have assetts that greatly exceed in value their liabilities, yet they are unable to meet payments as fast as they become due and are forced to go under. All this ruin may be charged to the want of coin enough to do the business of the country. A few men make vast profits out of the ruin of others. It is stated on what appears to be good authority that a few New York capitalists cleared thirty millions of dollars out of the panic already. These are the men who do not want Congress to restore the free coinage of silver. And they have power enough to accomplish their will, for the influence of aggregated capital dominates Congress.

Terrible destitution, hunger, cold and general misery prevails in Europe. The winter is the severest in fifty years, business is dull, and vast numbers of people can find no employment. All the nations of Europe have great armies and the navies are the most expensive the world ever saw. These vast fleets and armies must be supported by taxes wrung from the starving people. Emperors and kings and privileged classes are unmitigated curses to humanity. It is they who cause Europe to be a vast camp of armed men.

Secretary Windom evidently has a kindly regard for newspaper editors. He proposes three amendments for Senator Stanford's bill. The first amendment is to extend the basis of loans so as to include all kinds of property; the second is to lend money to men who have brains but no property and the third to loan to men who have neither brains nor property on the grounds of citizenship. The last two amendments must be especially designed for editors.

The engagement is announced of D. O. Mills to the Marquise de Talleyrand. The titled dames of Europe may be starting in to follow the example of the titled men in marrying rich Americans. In this case, however, there is better reason for the lady's action. She is a native of Boston who married a titled Frenchman, and after some years of unhappy life with a noble blackguard was glad to get divorced from him and now wisely determines to marry a decent American citizen.

During 1890 buildings to the value of over $4,000,000 were erected in the city of Los Angeles. Each week during about five months an average of 125 car-loads of oranges were shipped. Other fruits and vegetables aggregating immense value were shipped by whole train loads every day. With such resources as these the country must increase very rapidly in population and wealth.

A Farming Spot in a Big City.

I know an old lady who owns a house in the very heart of the town. It is environed by a splendid little park, where you may see through the fences, as you go past, a browsing cow and a colony of fowl, garden houses and beds of flaming flowers. Year in and year out the owner has resisted the most tempting offers to sell this land, each foot of which is almost priceless. Of all the rich people of New York—and she is by no means one of the richest in money—she is almost alone in her love of a touch of nature under her own windows, and in an appreciation of the fact that the rustle of green leaves and the twitter of birds is a melody as precious as the clink of minted gold.—New York Cor. Pittsburg Bulletin.

A Diamond Earring in Her Shoe.

One of the most singular happenings occurred in this city on Monday evening. A lady of East Main street while walking home was disturbed by an article in her shoe, which she thought at first to be a cinder which had gotten in while walking along. She went limping home, and on removing her shoe found a diamond earring. Her dress skirt had apparently caught it up in some manner and dropped it into her shoe. The lady is at a loss to know who lost the valuable, and cannot tell where she found it.—Lexington (Ky.) Press.

From One Head of Barley.

Four years ago Miss Lena Woodard, living on Thorn creek, Wash., sowed the seed from one head of barley. She harvested the crop with a pair of shears, and sowed the amount received the next year, again harvesting it with her shears. The third crop her father cut with a grass scythe, getting enough barley from this crop to sow forty acres last spring, which averaged forty bushels to the acre when thrashed, making a total yield of 1,600 bushels from one head of barley in four years.—Detroit News.

A YOUNG NUN.

Within the convent grim and gray
And ivy grown,
She liveth on from day to day,
Life's monotone.

She leaveth oft the ancient pile
And passeth by,
Yet I have never seen her smile,
Nor caught her eye.

Her hands are very white and small,
And those who know
Say that on Fever's brow they fall
Like flakes of snow.

They say her voice is soft and sweet
In Sorrow's ear,
Wooing the soul to Mary's feet
From doubt and fear.

Ah, me! And yet her youthful face
Clad though it be
In cold religion's saintly grace
Is fair to see.

Her eyes, so modestly cast down,
So introspect,
Could light a smile or arm a frown
With dire effect!

'Tis just such orbs that steadiest burn
With passion's fire;
Can all the tears in Virtue's urn
Quite quench desire?

Her mouth is red, and shaped for bliss
It seems a loss
That it should only kiss and kiss
Her rosary cross.

Oh, Little Nun! Thou art too fair!
It had sufficed
If one less sensuously rare
Had wed thy Christ.

The devil oft in form of saint
Entraps the eyes;
Thou art a soul without attaint
In devil's guise!

—George Horton in Chicago Herald.

The Decoration of Prayer Books.

The prayer book that the Vanderbilts, the Astors and other families use for every day, that is to say every Sunday occasion, costs about $50 each. Mrs. Anson Phelps Stokes has just ordered two $60 silver bound prayer books, and these will be given to her two daughters on the occasion of her silver wedding. Prayer books are used now a great deal for presents in society, and particularly for wedding presents. The really correct thing, it may be mentioned, is a small prayer book bound in white morocco, with elaborate silver trimmings. The resulting ornamentation is very rich and very handsome. The designs are either flowers or allegorical figures that have a quaint and mediæval character. The work is open work that shows the cover of the book, and this supplies a very effective groundwork.

In some cases, however, the book is completely cased in silver and the silver is very artistically worked. There is still a slight demand for ivory covers, but the demand is so slight it is scarcely worth mentioning. The covers of the prayer book are enbellished with a silver cross if the morocco is retained on one side and the bride's initials on the other. The books themselves are generally of English make and what is known as the Oxford edition. The type is beautiful and the binding is in the highest style known to the art.

In the original covering the Bible or prayer book is about the cheapest book of its quality that can be found. After its manipulation by a fashionable jeweler it is about the dearest. A pretty book mark usually accompanies the prayer book composed of three white ribbons. They are marked with a heart, a cross and an anchor, signifying, of course, faith, hope and charity.—New York World.

George William Curtis' Wife.

I very often see a matronly looking woman with a bright, intellectual face on Broadway, in the vicinity of Washington square. Her manner is simple and dignified, and altogether she is handsome and agreeable. She is rather old fashioned in her ideas of dress. Her gowns have all the quaintness of twenty-five or thirty years ago, and this rather pleasing effect is heightened by the manner in which she wears her hair, pressed flat on top and folded neatly down the sides of her head. Who is she? The wife of George William Curtis. She was a Miss Shaw before her marriage to the brilliant litterateur.

Mrs. Curtis leads a remarkably simple life at her pleasant home on Staten Island. The house is a neat frame cottage. It is surrounded by spacious grounds, in which are many fine old trees. A winding drive leads up from the gate to the house. The appointments of the interior betray at once the literary man and cultured scholar. The house is furnished in extreme good taste, and an air of refinement and culture is prevalent everywhere within. Mrs. Curtis is not known in the literary world except as the wife of Mr. Curtis. She very rarely goes into society, although she has friends by the score. Mrs. Curtis' pleasant and genial appearance does not indicate that she has found the companionship of a literary man irksome or uncongenial.—New York Cor. Springfield (Mass.) Homestead.

Lillian Russell's Daughter.

Little Lillian Russell, aged 6, is a miniature copy of her beautiful mother. She has the same hair and eyes, but her complexion is tanned by the jolly outdoor life she has led. She was never separated from her mother until the last two years, and as a natural consequence of her trips on "the road" she has strong theatrical preferences.

She is now at the Sacred Heart academy, where her mother visits her every week, and takes her home occasionally for a few days. She considers life a dreary waste unless she attends a matinee frequently, and her interest in the play and criticism of the characters are extremely refreshing. She is a warm admirer of Little Lord Fauntleroy.—New York Letter.

Mourning Watches.

Black onyx has lately been utilized in making cases for mourning watches; they are usually open faced. Chains composed of oblong blocks of onyx joined by slender golden links accompany the watches.—Jewelers' Weekly.

Germany employs 5,500,000 women in industrial pursuits, England 4,000,000, France 3,750,000 and Austro-Hungary about the same number, and still women are the weaker sex, the lesser half, the clinging pensioners on man's beneficence.

A Fall in Crockery.

I was amused by a sign that I saw the other day. It was prompted, no doubt, by the shopkeeper's enterprise, and announced a "Great Fall of Crockery and Furnishing Goods." Crockery that had suffered a very great fall you would hardly care to buy.—Brooklyn Eagle.

Mme. Le Roy, mother of the Duc d'Alicante, and well known to the scientific world from her explorations in Asia and Africa, is now preparing to start for India. She intends to visit every port in the country and to ascend the Himalayas during her journey.

COURT NOTES.

John A. Hannah, Superior Judge.

MONDAY, December 29th.

Application of F. E. Densmore for admittance as a practicing attorney of Inyo County.

Mr. J. H. Bulpit of Bishop was in town at the beginning of the week.

Mr. E. Robinson returned to Independence last Monday from a trip to San Francisco.

Rev. Andrew Clark of Bishop was in town during the week on a visit with his son, Mr. W. Clark.

The young people about town will give a social at Mairs' Hall this evening. Come out and enjoy yourself.

The day after Christmas many teams were plowing in the Tehachipa Valley, at an altitude of 5,500 feet above sea level.

Mrs. S. P. McKnight and Miss Nellie McKnight returned to Bishop last Tuesday from a short visit with friends at Independence.

The following have been elected officers of Masonic Lodge No. 221 at Independence, to serve during the ensuing year: John S. Gorman, W. M.; T. C. Boland, S. W.; G. W. Brady, J. W.; C. Mulholland, Sec.; O. I. Mairs, Treas.

L. J. Rose of Los Angeles has a mare whose colts have been sold and brought a total of $160,000. The mare is now aged about twenty years and will be well cared for till she dies. Mr. Rose now has one hundred head of running horses, all of the very best blood.

Secretary Noble is trying to have cavalry detailed in the spring to keep sheep out of the mountains of California. Uncle Peter declares he will keep them out of his nook in the Sierras with a shot gun. It is bad enough for the sheep to eat all the pasturage, but Uncle Peter swears he won't stand it to have them go into his cabin and eat his bacon.

Several people from Big Pine and Independence who were at Bakersfield recently, had dental work done there. They were treated by Drs. Wasson, father and son. All who had treatment speak very highly of the Doctors and express entire satisfaction with the work done. The Doctors intend making a trip through Owens Valley in the spring, and will visit all the towns in the practice of their profession. Due notice will be given of their coming.

Let Us Go To Los Angeles.

The people of Inyo County can now ask for a change of venue in the Elliott case. The army of witnesses are used to travel and are well prepared for it, so far as teams, wagons and camping outfits are concerned. No doubt the witnesses would enjoy a trip to Los Angeles. Oranges are ripe now, and a few weeks among the orange groves would be quite pleasant. Let us ask for a change of venue to Los Angeles.

Valuable Mines.

Mr. O. I. Mairs of Independence took a trip from Bakersfield to the tin mines in San Bernardino county, not far from Riverside. He says a very large amount of capital has already been invested in developing the mines. Extensive buildings are erected, the best of machinery is there, good roads are made, and what is of most importance the mines are well developed. He was assured that there are large bodies of tin ore in sight richer than the ore of the mines in England. Everything indicates mines of great extent and value.

Some Ducks.

Vast numbers of ducks are now at Owens Lake. A party passing up the west side of the Lake last Sunday saw the water full of them for a distance of ten miles or more. The ducks were in great solid masses, like divisions of an army, with thousands of skirmishers scattered all about these central bodies. There are very few hunters to disturb the birds and and most of these are Indians. An Indian will shelter himself close by a favorite haunt of the ducks and wait till a flock comes near enough and fires with a shot gun. The usual result of one shot is about two dozen ducks, and as this is all the hunter wants in one day he shoots no more till next day. The ducks are plump and fat and make fine eating.

Some Errors.

In the Christmas issue of the Reno *Gazette* a description is given of Owens Valley. In general the facts are fairly stated, but there are some errors. For instance, the population is stated to be about 1,200. The town of Bishop alone has about that number and the population of the entire valley is about 3,200. The *Gazette* says the valley has room for about 4,000 settlers. There is plenty of land and water here for a population equal to fifty times that of Reno, or for about five times that of the whole State of Nevada. Owens Valley can be made to produce an abundance of all products of land for 200,000 people. The *Gazette* is a well edited paper and has no superior in Nevada.

Cursed With Criminals

Bakersfield is plagued with desperate characters. Mr. N. N. Saylor of Big Pine, who was there as a witness in the Elliott case, was knocked senseless with a sandbag and robbed. The crime was committed on the principal street of the town, within one block of the Arlington Hotel, about eleven o'clock at night. The attack was so sudden and the blow so severe that Mr. Saylor had no time to make any resistance or give any alarm. The robbers escaped. Only a few days before that the County Treasurer of Kern was assailed on the street about six o'clock in the evening. He killed one of the robbers and the others fled. Four men were arrested on suspicion. The people of Bakersfield must take desperate measures to rid their town of such dangerous and desperate characters.

An Affair of State.

All the bills against the county for the late trial of W. T. C. Elliott are not yet presented but it is reasonably safe to say that the total amount will exceed ten thousand dollars. The two trials at Bakersfield will cost the county not less than sixteen thousand dollars. For a county having so small a population as Inyo this is a very serious matter. Elliott has now been tried three times and the total expense connected with his case will be equal to about three fourths of the revenue of the county for an entire year. And the end is not yet, as the case stands just where it did two years ago. For aught that now appears to the contrary the case may bankrupt Inyo county. Elliott has a right in law to demand another trial immediately, and should this be had no better result may be expected than we have had in the other trials. This case offers good reason for so amending the law that when a person accused of crime asks a change of venue to another county, and said change is granted the State should bear the expense. No matter how depraved and brutal a criminal may be, nor how great his crime, there is no limit to the number of witnesses he may have subpoenaed and taken away to another county. One who can murder a fellow creature will not stick at making an affidavit to a lie; and the affidavit of the accused that the persons he has named are witnesses material to his defense, is all that is necessary to secure the issuing of any number of subpoenas. The State gives to criminals a privilege that may bring little short of financial ruin upon a poor county and therefore the State should bear a part at least of the expense where defendants take a change of venue.

Tough Animals.

The endurance of Owens Valley horses was well illustrated on the recent trip to Bakersfield. Let us take the journey in one direction alone to show this: From Bakersfield to Tehachipa the distance is fifty miles. On thirty miles of this, approaching Tehachipa, there is a climb from 400 feet above sea level to an altitude of 5550 feet. Part of this is very steep. This stage is made the first day. The trip for the second day, from Tehachipa to Coyote Holes, is sixty-five miles. Seven miles of this, up Redrock Cañon, is through deep sand and up steep grade. The distance covered on the third day is fifty-five miles, from Coyote Holes to Olancha, at the south end of Owens Lake. At least fifteen miles of this is through deep sand. Independence was reached on the fourth day; the distance is forty miles but the road is so sandy most of the way that the last stage is about as hard as any of the others. The journey is made over a mere track through the desert and stretches of over twenty miles must be made without water. The party that came in on Sunday had sixteen horses and all of these but one got to the end of the journey in good condition. This shows the value of Owens Valley horses as roadsters and for carriage animals.

Very Dangerous Shooting.

Last Sunday Mrs. Geo. M. Gill, wife of our Superior Judge elect, was standing in front of a window in her residence about noon when the crash of breaking glass was heard and the broken pieces fell upon a table just in front of where she was standing. Mrs. Gill looked up and saw a hole in a pane of glass directly over her head. She picked up from the floor a rifle bullet that was slightly flattened and which Mr. Gill now has. A boy was in the brush back of the house shooting at birds with a rifle and there is no doubt that he sent the bullet through the window. Had the rifle been aimed a little lower than it was Mrs. Gill would probably have been killed. The boy had no intention of injuring anyone, but one who is so young or so indiscreet as to send bullets crashing into dwellings should not be allowed to use fire-arms. It would be very poor consolation to Mr. Gill to tell him that the boy did not mean any harm when he fired the shot that killed his wife and left his little children without a mother to care for them.

Kind Hearts.

On Christmas Eve, a ball was given in the New Southern Hotel in Bakersfield. During the late political campaign a young man had both arms blown off by the premature explosion of a cannon when firing a salute in honor of Senator Stanford. The party was given for the benefit of the unfortunate young man. The large dining room of the hotel was beautifully decorated with flowers and foliage wreathed about the columns and chandeliers. Large branches of orange trees, heavily loaded with fruit were hung on the walls around the hall and the beautiful golden globes among the rich green foliage made a beautiful decoration. The whole entertainment, including music, an elegant supper, the decorations and the use of the hall and other rooms, was given as a contribution by Mr. J. C. Morrison, proprietor of the New Southern. Four hundred dollars was given as the net result of the party to the injured man.

Wanted to Buy Cattle.

Mr. L. J. Rose Jr. of Los Angeles was in town several days this week; he was accompanied by A. Garcia. Mr. Rose came here intending to buy cattle, the kind he wants being steers only, of two-years-old and upward. He expected to get such cattle at about fourteen dollars per head, but the lowest price that would be accepted was eighteen dollars. Mr. Rose says he can have cattle from Arizona delivered in Ventura, where his herds are, at seventeen dollars per head. It would cost at least two dollars per head to take cattle from Owens Valley to Ventura, and with this added to the greater price asked for cattle here he could not afford to buy. Mr. Rose evidently expected to buy extensively as he came here with a letter of credit for a large sum, fifty thousand dollars, it is said.

A Fizzle.

When the attorneys for the prosecution in the Elliott case announced in Court that all their evidence was in, and that they now rested their case, Mr. Kittrell, attorney for Elliott, addressed the Court, and said that the defense would not call a single witness and did not want to make any argument to the jury. They were quite willing to let the case go to the jury as the prosecution had left it. The result proved the correctness of the judgment of Elliott's attorneys. There could not be a more complete fizzle than the result of this trial, nor stronger proof of the utter folly of having it.

New Year's Ball.

The Independence Cornet Band were complimented with a good attendance at their ball New Year's eve. From Bishop there came Mr. and Mrs. B. B. Sommers, Mr. and Mrs. A. Valverde, Miss Rita Drake and Miss Grace Gifford, Messrs. E. Mallory and W. A. Chalfant; and J. E. Jones from Round Valley. Mr. and Mrs. J. J. Stewart, Mr. and Mrs. A. C. Harvey, Miss Russell, Miss Deming, Mr. E. Edwards and others were up from Lone Pine. The party was very successful and pleasant.

A Good Lecture.

Last Monday evening at the M. E. Church Rev. E. Vandeventer, Superintendent of the Methodist Mission of Nevada, delivered an excellent lecture. The subject was "Men For To-day." At all times in the world's history the chief need has been "Men," and never was that need greater than to-day. It is not wealth, or high position in society; it is not talent or learning, or even genius that makes such men as the world most needs. Character is what is needed; love of truth, justice, honesty; unflinching devotion to right; these are the qualities that make the men most wanted in the world. The lecturer named many of the great men of all times and nations to illustrate his meaning. Mr. Vandeventer has a keen sense of humor and is a good mimic. He amused his audience well in addition to giving them wise counsel and excellent instruction for every day life.

A Chance for Big Profits.

The Reno *Gazette* says it will take the Stockmen of Nevada fully five years to recover from the losses of last winter, and it is very doubtful if the State will ever again support as many cattle as in the past. Every animal that could possibly be beefed during the past five years was sent to the shambles. The losses of range cattle all over the Coast have been enormous during the past two years and the result of these causes is certain to be a big rise in the price of cattle. Buyers of cattle at present prices are likely to make big profits.

Watch Meeting.

Just as the clock marked mid-night, the sound of the bell on the Methodist church at Independence was heard. It was not a slow and solemn peal but with clear and joyous sounds that the bell rang out, calling all who would to unite in praise to the great Creator, and in prayer for grace to guide them aright through the year 1891 upon which they had just entered. All who attended the meeting were better and happier for it.

ORDINANCE No. 31

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

SECTION 1. The regular meetings of the Board of Supervisors of Inyo County, State of California, must and shall be held at the Town of Independence, in the County and State aforesaid, being the County Seat of said Board on the first Monday of January, April, July and October of each year, and must continue from time to time until all the business before the said Board is disposed of. Such other meetings must be held as are otherwise provided by law.

SECTION 2. This ordinance shall take effect and be in force on and after fifteen (15) days from its passage, and Ordinances No. 2 and 21 of said Board of Supervisors together with all ordinances or parts of ordinances in conflict herewith, and each and all of them are hereby repealed.

SECTION 3. This ordinance shall be published in the INYO INDEPENDENT, a newspaper published in said Inyo County, at least two weeks, said publication to be made for said time and before the expiration of said fifteen days.

This ordinance was passed by the Board of Supervisors of said Inyo County, State aforesaid, at a Special Session of said Board, held on December 10th, 1890, by the following vote: AYES—J. D. Harger, J. J. Stewart and Seth G. Sneden.

SETH G. SNEDEN,
Chairman pro tem. of the Board of Supervisors of Inyo County, State of California.

Attest: P. H. MACK,
SEAL Clerk of said Board of Supervisors.

By ALEXANDER CLARK, Deputy Clerk.

[ENDORSED.]

ORDINANCE NO. 31.

Filed and recorded December 10th, 1890, in Ordinance Book "B" on page 69 et seq.
P. H. MACK, Clerk.
by ALEXANDER CLARK, Deputy Clerk.

Proposals for Care of Indigent Sick of Inyo County.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until 10 o'clock A.M. on Wednesday, Jan. 7, 1891, to contract for the care of said indigent sick for the term of one year from May 10th 1891 to May 10th, 1892, said bids to designate the amount for which parties contracting will care for said indigent sick on the basis of an average of four patients per day throughout the year, and to include all medicine, nursing, board, lodging and washing. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care.

Said contractor to care for all the indigent sick properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for, said excess to be paid for by extra allowance on presentation of bills duly sworn to, at the regular meeting of said Board immediately after said contract has expired. The average four per day to be paid for at the regular meetings of the Board on presentation of bills duly verified. All payments to be made by warrants drawn upon the Hospital Fund of said county.

The person or persons to whom said contract shall be awarded shall give a good and sufficient bond in double the sum of the contract price, for the faithful performance of said contract.

The care and management of said indigent sick by such contractor shall be at all times subject to the inspection of said Board of Supervisors, or any member thereof, or any person appointed by the Board for such purpose.

Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of ten o'clock and twelve o'clock A. M., on the 7th day of Jan. 1891, and the Board reserves the right to reject any and all bids. P. H. MACK,
Clerk.

WM. H. HUFF, Prop'r

We've heard of a woman who said she'd walk five miles to get a bottle of Dr. Pierce's Favorite Prescription if she couldn't get it without. That woman had tried it. And it's a medicine which makes itself felt in toning up the system and correcting irregularities as soon as its use is begun.

Go to your drug store, pay a dollar, get a bottle and try it—try a second, a third if necessary. Before the third one's been taken you'll know that there's a remedy to help you. Then you'll keep on and a cure 'll come.

But if you shouldn't feel the help, should be disappointed in the results—you'll find a guarantee printed on the bottle-wrapper that'll get your money back for you.

How many women are there who'd rather have the money than health? And "Favorite Prescription" produces health. Wonder is that there's a woman willing to suffer when there's a *guaranteed* remedy in the nearest drug store.

Dr. Pierce's Pellets regulate the Stomach, Liver and Bowels. Mild and effective.

This world is like a fruit basket. The big and attractive get on top, while the little ones are crushed out of sight in the bottom.

HOW TO GET RID OF SIDEACHE.

Who has not suffered from sideache? We all had it when we ran races at school—we have it when we overwork ourselves at any age. It comes on, as everybody knows, suddenly. By using one of ALLCOCK'S POROUS PLASTERS it goes away nearly as quickly. F. Roessner, of No. 556 West 58th Street, New York, says:

"It is with pleasure I write these lines in testimony to the powers of ALLCOCK'S POROUS PLASTERS. I have been somewhat annoyed with serious pains in my sides, for which several medicines have been prescribed, but to no avail, and through the advice of a friend I tried two ALLCOCK'S POROUS PLASTERS, and the relief they have given me is both satisfactory and astonishing. To any one annoyed with pains these plasters are a certain remedy."

Silver Bullion—Wife—My dear, isn't it a silver king they call a bullionaire? Husband (capriciously)—Really, my darling, I thought it was a cattle kin.

THE BUCCANEERS OF OLD

Flaunted the skull and cross bones, their ensign, defiantly at the masthead. Your modern pirate, not on the high seas, but upon the high reputation of standard remedies skulks under various disguises. His hole and corner traffic has never to any degree affected Hostetter's Stomach Bitters, although that standard invigorant and corrective has long been the shining mark at which his shafts have been directed. Cheap local bitters, composed of fiery unrectified stimulants, with an infusion, or extract possibly, of some tonic bark, are still sometimes recommended as identical with, or similar to, or possessing virtues kindred to those of America's chosen family medicine. These perish speedily, while the great subduer and preventive of disease pursues its successful career, overcoming malaria, dyspepsia, nervousness, kidney troubles, constipation and rheumatic ailments, not only on this, but on many continents.

When the pretty girl marries rich she has reached the sweet buy and buy.

A man who has practiced medicine for 40 years ought to know salt from sugar, read what he says:

TOLEDO, O., Jan. 10, 1887.

Messrs. F. J. Cheney & Co.—Gentlemen—I have been in the general practice of medicine for most 40 years, and would say that in all my practice and experience have never seen a preparation that I could prescribe with as much confidence of success as I can Hall's Catarrh Cure, manufactured by you. Have prescribed it a great many times and its effect is wonderful, and would say in conclusion that I have yet to find a case of Catarrh that it would not cure, if they would take it according to directions.

Yours Truly,
L. L. GORSUCH, M. D.
Office, 215 Summit St.

We will give $100 for any case of Catarrh that can not be cured with Hall's Catarrh Cure. Taken internally.

CAUSE OF HYDROPHOBIA.

The Theory Advanced by a Pratical Observer.

TWO TESTS WHICH PROVED HISASSERTION

Hawks' Mode of Warfare on the Canine Species.

I captured and raised a nest of young hawks. One female survived and became tame, following me devotedly around my garden. She learned to eat "cut worms" and was of very great service in consequence. She also kept birds from my strawberries, and by catching mice and young cats protected my chickens. She would not permit a dog to come on my grounds. The way in which she treated them and the effect her treatment produced may throw some light on the blindness and madness of foxes and wolves, and possibly be a clew to a cause of madness in dogs.

Her method with dogs was peculiar and must have been hereditary, as she had had no training. When she observed a dog near her she would thrust out her head, draw up one foot out of sight and drop her wings. If the dog advanced to attack her she would spring into the air by a quick movement of her wings, and catch the dog by the end of the nose, using the foot that had been hidden under her breast feathers. On this she supported her weight, steadying her body with her wings and threatening either eye that should open. I witnessed her encounters with two small lapdogs, a large fighting black and tan, bull terrier and a very large buff English mastiff. Each dog gave up on his third experience with her talons. The small dogs disappeared from town. No one knew where they went to. The terrier ran to his master's blacksmith shop, where he retired behind the forge.

Soon his master, Mr. James P. Hill, of Waterville, Me., came and asked me to go and see the dog. He had witnessed the fight with me only a few minutes before. On reaching the shop I found his dog cowering behind the forge in a pool of water, and as wet as though a bucket of water had been thrown upon him. I said to his master, "I would not throw water on him, he is frightened enough now." He replied: "I have not thrown any on him; that is sweat, the first I ever saw from a dog, and that is what I wanted you to come for." I saw the dog a few days after, with a thick viscid saliva hanging to his mouth, leaning against some infant school children, looking into their faces, receiving their caresses and acting very restlessly. Knowing his savage nature—the man's own children could not caress him up to the fight with the hawk—I went and called him into my garden and quietly ended his troubles with my pistol.

The mastiff was a noble dog of rare qualities, very intelligent, docile and obedient, would run errands better than a boy, and never played truant. He was owned by a gentleman in Winslow, Me., who said $100 would be no temptation for him to part with the dog.

I was called upon by this gentleman for professional services. His dog came with him. Knowing the hawk's love for a fight, I asked the man to bring the dog in. He wanted to know why. I told him. "I want to see the bird that can whip my dog," said he, and, seeing, nothing would do but "see the feathers fly." He did not see a feather disturbed, but his noble dog, after the third bout, ran for home, and the man could not stop him. The next week he came again. He had shot the dog "on the verge of madness." "A changed dog," "all afraid of him," "no longer mind."

"When I got home," said he, "I found the dog had come straight home and crawled in behind a pile of wood, which I had to take down to get him out. The dog, and the ground about him, were as wet as though a bucket of water had been thrown there; his eyes were bloodshot, and he growled and showed his teeth, a thing he was never known to do before. I had to kill him, for we were all afraid of him." I had told him what the result would be, still I could not help feeling sorry for him, and saying so. "Well, it was no fault of yours. If I had not seen the fight I could not have thought it possible. I would not have taken $160 that day for the dog. It was a pretty fight and worth the cost."—G. F. Waters, M. D., in The Swiss Cross.

Summer Camp for Invalids.

But perhaps the most curious, and certainly the most pathetic, of our summer colonies out of doors is that which is recruited from the hospitals. Whenever a hospital has a garden attached to it you will find tents pitched on the grass. In some cases they will be large army tents, and through their open flaps you may see rigid figures stretched on mattresses on the floor, while neat and noiseless nurses pass to and fro among them. In other instances they will be roofs of canvas, under whose shelter feeble, white faced men and women swing in cots or hammocks. The New York hospital has one of its spacious roofs covered with canvas awnings, beneath which patients who are beginning to mend are quartered, in order to have nature assist in the cure. It is a very recent institution, this summer encampment of the sick, but it is, I am told, already established as a valuable part of the process of cure. The trouble is that few of the hospitals have spare ground enough to carry out the plan properly. Some, too, which have the space, are so hedged in by other buildings that the sanitary value of their open air is seriously impaired.—Alfred Trumble in Pittsburg Bulletin.

Chinese Wit.

A traveler in the far east relates that Chinese gentlemen of quality consider it beneath their dignity to invent their own jokes. When they go into society each carries with him a collection of bon mots and smart repartees, obtained from various sources, and when he thinks the time has come for him to make a sage remark he turns over the leaves of his commonplace book till he lights on a suitable passage, which he gravely points out to his neighbor. The latter reads the passsage with equal gravity, whereupon he selects from his own stock an appropriate rejoinder, which he shows the other with a bow. Both then smile solemnly, and, after many compliments, resume their conversation.—Il Popolo Romano.

A Ghost in London.

The story goes around in London that a ghost has really been seen. A well known woman, just before appearing in some private theatricals, saw an old friend standing near the entrance of her dressing room. She greeted him, but he only shook his head and walked away. She learned the next day that her friend had died the day before she thought she saw him.—San Francisco Argonaut.

The Captive Prairie Dogs.

"When I was a little boy my father moved from Hoosierdom over upon a broad and blooming prairie in Illinois," said a man to a reporter. "One time my father trapped four or five prairie dogs. I don't know how he managed it; I've forgotten that. I think they must have been young and foolish, like baby rats, which ventured where their pa and ma would never go. My father brought them home, and we children hugged ourselves in delight as we fancied them as pretty pets, like squirrels or white rabbits. A cage was quickly fitted up, the captives were placed in it and surrounded by all the dainties which we fancied could tempt them to forget their captivity. Our parents kept us away from the cage, as the little strangers regarded us with a terror which they did not attempt to conceal. But we went to place more food before them the next morning. The food previously provided had not been touched. The little prisoners sat wearily on their haunches in the dark extremity of their cell. Childish curiosity was repressed till the second morning, when the cage was again visited. The captives sat in the same position, and no morsel of the varied bill of fare with which we had designed to tempt them had been touched. The water was undiminished in the bowl.

"Another day passed, the third morning came, and we ran out to see our pets. The sight that met our eyes I shall never forget. In their hunger and despair the poor captives had eaten their own feet. The bloody stumps were a sad and sickening reproof to our cruelty in depriving the children of the prairie of their wild, sweet liberty. We felt it, children as we were, and silently, almost in tears, we opened the prison door and slipped away to give the captives opportunity to escape. But it was too late. With their feet gnawed off up almost to their little bodies, they could scarcely more than drag themselves out and creep away into the grass, where they soon after died."—Chicago Herald.

The Wit of an "Immortal."

M. Labiche, who died in Paris not long ago, was a member of the French academy—one of the forty literary "immortals" of France. M. Labiche originated the saying, now not unfamiliar in characterizing a person who, though ignorant, insists upon making a great show of what he thinks he knows. "He is a man of vast and varied misinformation." Labiche expressed the thought in this way: "He has a great and varied ignorance." Not long after Labiche had used this expression, and had embodied it in a literary work, Prince Bismarck said of some one: "That man possesses a perfect encyclopædiae ignorance." Labiche insisted that Bismarck had borrowed the phrase from him. But it is more probable that the repetition was a mere coincidence, as Bismarck himself is a man of genuine wit. At the marriage of his son, Labiche gave a little party, and, as he was quite unaccustomed to ceremonies of a social sort, he was at first puzzled to know what he should say in greeting and parting with so many people. "I have it! I have it!" he exclaimed finally; "I will simply say to each person as he arrived, 'At last! and to each as he goes away, 'Already?'" He carried out his programme, and all his guests felt very much flattered.—Pittsburg Bulletin.

Starvation and Red Tape.

Once when I was in London a woman applied to a hospital for food for her babe, which was dying of starvation. The committee of gentlemen called her in and asked her a string of questions, and finally said they could not give her anything unless she had a written application from the secretary. She thanked them, gathered her dying child in her arms and started off to look for the secretary. He called her in, asked her questions and said he could not make out the application without an order from the doctor. She thanked him and went back to the hospital to the doctor. He gave her the order, and with hope in her heart and hugging the precious burthen to her breast, bidding the little one wait just an hour more, the poor mother hurried away to the secretary, and from him to the hospital again. But when food was brought and she drew the ragged end of her shawl away from the baby's face, the little one lay dead in her arms. It was dead of starvation and red tape.—Catharine Cole in New Orleans Picayune.

Culinary Implements for Hotels.

A hotel steward who is giving advice for the purchase of culinary implements said the other day that he knew of no line of business in which greater abuses have grown up than this. The firms that manufacture kitchen goods have long made it a practice to give a tip to each cook every time he buys anything or orders any repairs made. The consequence is that the most intense opposition made to any progressive movement of the day is that which combats all the new inventions for saving labor or material. As an instance, there is a new process for doing every form of cooking without the direct application of fire, and the especial beauty of it, beyond the fact that it cooks perfectly, is that the roasters, boilers and broilers practically never wear out. On this account the invention languishes, except when a bold proprietor takes the matter out of the cook's hands and makes his own equipment. But even if he does that he will find that cooks are apt to refuse to work with these modern tools, and, if they take the situations, will declare that the machinery will not keep in order.—New York Sun.

The Idiotic Topical Song.

The impression that all "topical songs," which form a prominent feature of the comic operas, so called, are written in asylums for idiots is not quite correct, though the quality of most of the songs certainly gives color to it. The nursery rhyme is bad enough, perhaps, but in comparison with the average topical song it is a gem of purest ray serene. Every time I attend a comic opera I want to go out when the topical song begins. In the first place the alleged singer has no more voice for melody than an old crow, and in the second place the words he pretends to sing are either idiotic, or, in a literary sense, mere rubbish. It is a rule to make new verses for every new thing that comes up.—New York Cor. Detroit Free Press.

A Charming Bridal Chamber.

The most beautiful bridal chamber ever seen was one recently fitted up by an English duke for his bride. Her favorite flower is the daffodil, and it predominates in the decorations. The ceiling and the walls are of a pale grayish green and gold. The fringe and dado are of dull gold canvas silk, hand embroided in white daffodils and narcissi. The chandeliers have for globes opaline glass on the same flower designs. The velvet carpet is gray green, sprinkled with golden flowers. The furniture is of heavy English oak, carved with winged love's heads, and the draperies and window hangings are of Spanish lace, in conventional designs of daffodils.—New York World.

Distance Covered by a Waltz.

Mr. Edward Scott, in his "Dancing and Dancers," makes the following estimate of the distance actually waltzed over in an evening by a belle of the ball room: "Do you, 'my fair and fragile reader,' think you would go six times around a moderate sized ball room, say, making a circuit of eighty yards during a waltz? Yes, at least, even allowing for rest. That, then, is 480 yards, if you went in a straight line. But you are turning nearly all the time, say on an average, once in each yard of onward progress, and the circumference of a circle is rather more than three times its diameter, which will bring each waltz to over three-quarters of a mile, or, at least, fourteen miles for the eighteen waltzes."—America.

Pao Yun, president of the Pekin (China) Academy, is translating Shakespeare's plays into Chinese.

THE LITERARY WORLD.

A Dissertation on What is Called "Literary Merit."

POEMS OF INTENSE LITERARY VALUE.

A Doubtful Question That can be Solved by Reviewers.

What constitutes "literary merit?" Each editor thinks he knows. So does each literary critic. So do the people who will tell you that the poems or essays or books that live are possessed of it. There is a sort of agreed upon standard, known in a vague way by literary people and represented by our best periodicals. By all means keep this standard high, and keep yourselves up to the standard; but at the same time, once in a while, let your mind dwell upon the lesson contained in the parable of the widow's mite.

If poems or prose writings had intelligence, and could think for themselves, there would be one infallible test for intrinsic value that they might append to themselves after they had stood the further test of time: "Only remembered for what I have done." For instance, several years ago a little poem appeared in one of our daily papers from a local author. I cannot think he was paid for it, nor can I think any other paper ever thought it worth copying for its own columns. I well remember glancing over it with a little bit of contempt in my mind and a good deal of indifference, and feeling sure it was quite without "literary merit." It was about the "baby boy," a very hackneyed subject, you will all agree.

Well, the other day my pride of judgment received a humiliating blow. A woman, good and true, in the humble ranks of life, had seen this poem. Her own baby boy was only a few weeks old, and perhaps she had let creep into her heart the thought that he was something of a burden, with poverty and hard work pressing upon her each day. The little poem struck a higher, better chord than that, and the tone of her thoughts grew sweeter. She cut it out of the paper and tucked it into the sewing machine drawer, and learned it, a line at a time, as she sat at work. Nor did it stop there; around among the neighbors it went, and brought many a blessing to the little babies in the poor, crowded houses.

Question: "Did the poem have literary merit?" Certainly, its simple phraseology, its humble truth, its honest purpose, spoke to the mind as well as the heart of these people as one of Browning's sonnets could not have done.

Again: There is a housekeeping paper published in one of our western cities. "Very ordinary," I have been wont to pronounce it, and after a cursory, indifferent perusal I have sent away my numbers to a little housekeeper on a Virginia farm. She is a brave little woman, left, at the age of 14, by the death of her mother, to bring up the three younger children and do the housework. Very limited was her schooling, of course. For two years, now, she has had this housekeeping journal, and I have had her occasional letters. And how she has grown mentally! It must have been the "literary merit" in that paper that I called ordinary, and could not waste my time upon.

There is apparent literary value and an intrinsic one, I feel bound to admit. There may be two ways of considering whether a poem or a book lives. If it is printed over and over again at the demand of the people, all the world knows it lives. But it sometimes happens that it is printed only once, is caught up by some heart, passed on and on in word or influence, and the good it does never dies. Is it not really "literary merit" that makes it live—the mode of its expression as well as its inherent thought? I am asking, for at the very end of my remarks, with a full recognition of the value of high standards, with a just respect for editors, critics and cultivated readers, but with an equally ardent appreciation of comparative value, I humbly confess that I do not know what "literary merit" really is.—Juniata Stafford in Belford's Magazine.

In a Mexican Market Square.

Passing on through the market place I emerged suddenly from a side exit into the market square. Just in front of me sat four or five groups surrounding a bunch of smoking faggots, and as I approached them a little girl or boy would step forward and offer for sale strings of glass beads or baskets of images made by Indians from clay. I bought several of these images and narrowly escaped being cheated in the process, for the little rogues who are playing merchants know when they have a stranger to deal with, and, although they smile at you, showing their white, pearly teeth, they will give you the wrong change if they can.

Just beyond these groups I saw other groups seated about large, square holes, which had been dug in the ground. At first I could not understand this, but after awhile I found out that they were engaged in roasting the century plant. The holes in the ground were apparently three feet deep and perhaps four feet across the top. Inside these holes they had placed a half dozen stalks of the plant over smoking faggots, and from the smoldering fire there issued a volume of smoke and the sound of escaping pulque. By and by a Mexican strode up, threw down a three cent piece, and, without a word, one of the agile boys jumped into the hole, chopped off a bit of the wood and delivered it to the purchaser, who went away munching on it as though it was the leg of a chicken. The juice of the maguey is sweet and intoxicating, and a great many of the Mexican people are, I regret to say, slaves of its power.—"R. M. Y." in St. Louis Republic.

Technical.

The technical speech of people in various trades and callings has an interest for others than dictionary makers. Even the most uninviting vocations have a language which attracts by virtue of its individuality. The freshest illustration of what I mean comes in this form: "Aren't you going to have a new dress for the ball?" was the inquiry addressed to the wife of an undertaker. "I can't afford it," was the dispirited reply; "you know it's between seasons." "What do you mean?" "Why, the pneumonia season is over, and the cholera infantum season hasn't begun."—Christian Union.

A Free Gift.

Mrs. Bibbs—See here! Why are you unloading all those shingles in front of my door? We haven't ordered any.

Driver—No, mum. They comes wid the compliments of the neighbors. You see, folks thinks from the way your boy acts that you can't afford to buy any.—New York Weekly.

They Have to Come Down.

There are no less than thirty different religious castes in India, and when the railroads were first established no two castes would ride in the same coach. The natives found it inconvenient, however, and now all sorts of castes mix up for a journey, but offset it at the end by calling each other dogs and infidels.—Detroit Free Press.

A DOCTOR'S CONFESSION.

He Doesn't Take Much Medicine and Advises the Reporter Not To.

"Humbug? Of course it is. The so called science of medicine is a humbug and has been from the time of Hippocrates to the present. Why the biggest crank in the Indian tribes is the medicine man."

"Very frank was the admission, especially so when it came from one of the biggest young phycians of the city, one whose practice is among the thousands, though he has been graduated but a few years," says the Buffalo *Courier*. "Very cozy was his office too, with its cheerful grate fire, its Queen Anne furniture, and its many lounges and easy-chairs. He stirred the fire lazily, lighted a fresh cigar, and went on."

"Take the prescriptions laid down in the books and what do you find? Poisons mainly, and nauseating stuffs that would make a healthy man an invalid. Why in the world science should go to poisons for its remedies I cannot tell, nor can I find any one who can."

"How does a doctor know the effect of his medicine?" he asked. "He calls, prescribes, and goes away. The only way to judge would be to stand over the bed and watch the patient. This cannot be done. So, really, I don't know how he is to tell what good or hurt he does. Sometime ago, you remember, the Boston *Globe* sent out a reporter with a stated set of symptoms. He went to eleven prominent physicians and brought back eleven different prescriptions. This just shows how much science there is in medicine."

There are local diseases of various characters for which nature provides positive remedies. They may not be included in the regular physician's list, perhaps, because of their simplicity, but the evidence of their curative power is beyond dispute. Kidney disease is cured by Warner's Safe Cure, a strictly herbal remedy. Thousands of persons, every year, write as does H. J. Gardiner, of Pontiac, R. I., August 7, 1890:

"A few years ago I suffered more than probably ever will be known outside of myself, with kidney and liver complaint. It is the old story—I visited doctor after doctor, but to no avail. I was at Newport, and Dr. Blackman recommended Warner's Safe Cure. I commenced the use of it, and found relief immediately. Altogether I took three bottles, and I truthfully state that it cured me."

Revivalist—Miss, have you found the Lord? American Heiress—I should say so. I'm engaged to be married to him.

Beware of imitations of the genuine Seal of North Carolina Plug Cut Tobacco.

Dr. Price's Cream Baking Powder

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

The Cod That Helps to Cure **The Cold.**

The disagreeable taste of the **COD LIVER OIL** is dissipated in

SCOTT'S EMULSION

Of Pure Cod Liver Oil with HYPOPHOSPHITES OF LIME AND SODA.

The patient suffering from CONSUMPTION, BRONCHITIS, COUGH, COLD, OR WASTING DISEASES, may take the remedy with as much satisfaction as he would take milk. Physicians are prescribing it everywhere. It is a perfect emulsion, and a wonderful flesh producer. *Take no other.*

To cure Biliousness, Sick Headache, Constipation, Malaria, Liver Complaints, take the safe and certain remedy SMITH'S

BILE BEANS

Use the SMALL SIZE (40 little beans to the bottle). They are the most convenient suit all ages. Price of either size, 25 cents per bottle.

KISSING at 7, 17, 70: Photo-gravure, panel size of this picture for 4 cents (coppers or stamps).

WHITELEY'S STORE.

One of the Wonders of the World of Trade.

THE SUPERB JEWELERY ESTABLISHMENT.

The Famous Bon Marche of Paris—Two Wonderful Stores.

Whiteley's establishment is one of the wonders of the world of trade. Comparatively few Americans visit it, as it is far away from what is known as the American beat—i. e., from the Langham hotel to the Metropole. Compared to the trade kingdom over which a single proprietor, William Whiteley, rules, such mere overgrown dry goods stores as the Louvre and the Bon Marche in Paris are but simple affairs. Whiteley's is not a store, but a whole congeries of stores, each as accessible to but as distinct from the other as the dining room is from the parlor on a floor with folding doors. What in the usual run of dry goods stores occupies a counter or at most but a room—such as the silk department, the linen department, the costume department, etc.—has at Whiteley's a large and imposing store to itself. The jewelry store is a superb establishment, the furniture house is magnificent; china, glass, ironmongery, dressmaking, sewing machines, coiffures, toys, Japanese and Indian curios, each and all have stores devoted exclusively to themselves, large openings giving communication through the entire series of establishments.

ADDITIONAL ESTABLISHMENTS.

This would be wonderful enough, but there are surprises at Whiteley's; a provision store of extensive dimensions adjoins an excellent restaurant, the restaurant leads into the aviary, conservatory and live stock establishments. There is a well supplied wood and coal office. Pianos are upstairs in a store of their own; near them is a large hall, decorated with flags, statuary, tables and chairs in profusion. Here a dinner of several hundred covers may be given, or ordered for any place, town or country, with every accessory, from the banquet itself to the waiter who serves it; all provided by Whiteley. I had nearly forgotten to name a charming picture gallery, where many original works of great beauty are displayed, and where orders are taken for copies of any masterpiece on the walls of any of the great galleries of Europe. Whiteley is also a banker. You may buy or sell money on his premises. You may take your passage by any steamer for any port. You may hire a servant; bury a deceased friend; put your belongings up at auction; purchase, sell, build or take down a house. In short, there is not a single transaction in life relating to trade which Whiteley is not willing to make for you. No wonder he calls himself "the universal provider." Such a business as Whiteley's must speedily make a man a bankrupt or a millionaire; and as disaster has not overtaken him, it is presumed that Whiteley has a good account at his own and other banks. His establishment has suffered frequently from fires, whose strangely persistent recurrence irresistibly suggests incendiarism.

In the matter of cheapness I find very little difference between Whiteley's and other establishments which are not especially devoted to wealthy customers, as are Gillow's in the furniture line, and Lewis & Allenby in the dry goods. An honest price prevails, and if an American visitor sees anything he or she likes at Whiteley's, I would advise him or her to purchase it without further ado, as it would be a waste of time to run all over London to try to find the same article at a lower price.

AT THE BON MARCHE.

For one American who has heard of Whiteley's in London, ninety and nine have heard of the Bon Marche in Paris. Persons who know no other single word in French are aware that bon marche means "cheap." This famous store is indeed a marvelous place. Outside of a few little knickknacks known as articles de Paris, the vast establishment is entirely devoted to the sale of dry goods. No wonder the American woman, with her national love for shopping, revels in hours spent in flitting from one counter to another. Gloves are to the right of her, flowers to the left of her, silks are in front of her, lace is beyond. Are these beautiful things really, or only in appearance, cheap? Why, the truth is they are sold at the market price. Examine well anything that is offered below the current rates, and you will discover a reason.

I will call the attention of American ladies to a custom which prevails at the larger shops in Paris, by which our countrywomen are misled, though no deceit is willfully put upon them; it arises simply from a difference of custom between the French and American merchant. When a price is seen upon a remnant in America, the purchaser knows that the marked figure is the price of the whole remnant, while in France the marked figure means per yard or rather meter, according to the French measurement. Thus, if an American lady sees some attractive pieces of lace or silk, marked variously from $2 to $10, and decides to take some or many of these remnants, it comes, as a very disagreeable surprise, to find out that the articles were at so much per yard, and that the shopkeeper will now measure the yards. Often the price is but a few sous reduction per yard on the original figure asked, and the purchaser finds herself with awkward lengths of goods she was tempted to buy only in the Mrs. Toodles spirit. To be sure, at the Bon Marche the privilege is given of exchanging articles which a purchaser may be dissatisfied with—if no harm has come to them. Even money is, under certain circumstances, returned.—London Cor. Boston Transcript.

A Great Discovery.

The problem on "How to marry on $12 per week" has at last been solved. The way to do it is to issue 900 invitations to the wedding, secure 900 presents from 900 victims, and sell off about 800 to secure capital to run the house on for the next five years.—Detroit Free Press.

"They say a ground hog shows in its habits just what the weather is going to be."

"Very likely."

"You've seen a ground hog of course?"

"Gracious! haven't I seen sausages?"—Boston Courier.

Love Is Blind.

Mr. Infrit—Miss Chanse, I love you! Will you be my wife?

Miss Chanse—I am sorry, Mr. Infrit, but—but—I am somewhat fastidious in my choice.

Mr. Infrit—Oh, but I am not.—Puck.

Saved.

"Look at that bill," said a young man as he entered a bank on Griswold street a day or two since, and laid a "ten" before the cashier.

"Yes; I'm looking."

"Is it all right?"

"No, sir. Bank has been busted two years."

"It's teetotally no good, eh?"

"That's it. Did you take it for good money?"

"I did. I was coming in with the St. Thomas excursion with my girl, and a stranger wanted change. I accommodated him."

"Yes."

"And I am here in a strange town, dead broke, and a good looking girl expecting candy, peanuts, ice cream and street car rides. Say!"

"Well?"

"After kicking myself twice around the square, what shall I do next?"

"Pawn your watch."

"Haven't got one."

"Anything else?"

"No."

"Any friends to borrow from?"

"No."

"Then be taken ill and sit in the depot all day."

"I'll do it! I'll have to do it! And I'll sigh and groan and kick and cough and take on, and the gal will never know what hit me. Thanks, old fellow—life is worth the living, after all."—Detroit Free Press.

Bill Nye's Advice.

Be warned by one who has your best interests at heart and do not seek to obtain wealth suddenly as a humorist. Dig ginseng root, or trap muskrats, or break steers, but do not seek to obtain an immediate fortune even as a humorous "fence," for you will regret it. Even wealthy humorists are not always happy. I know one who has more money than some farmers have hay, and yet he is sometimes sad. Though he has two pairs of trousers with creases down the legs and pink shirts with maroon collars to them, he often wishes that he could again be a poor clergyman preaching his old sermons over again as he used to do, but free from care and perfectly pure in heart. I know another humorist who has shaken hands with royalty and who keeps a team and who pays more for groceries every month than he used to get for a year's hard work, and yet he feels just as sorry when one of his children dies as any body else.—Bill Nye in New York World.

Hard Luck.

Mrs. De Winks—Why, how happy you look?

Lovely Daughter—Such news! I put in a claim for $250 for my trunk, and the railroad official said it would probably be paid very shortly.

Mrs. De Winks (a week later)—Mercy! What's happened?

Daughter—Oh, I do feel so miserable I wish I could die. Everything goes wrong.

"Dear me! Has the company refused to pay that claim?"

"No. They have found the trunk!"—Philadelphia Record.

A Chill in the Air.

He (at Saratoga)—You must permit me to compliment the hat you have on, Miss Keepaway; it is most tastefully trimmed.

She—Oh, thank you, Mr. Vere de Vere; but isn't it rather unusual for gentlemen to give their attention to such matters?

He—Well, yes, I suppose it is, but a man who has trimmed as many show windows as—er—um—yes. Excuse me, Miss Keepaway, perhaps you are finding the night chilly?—The Epoch.

Trouble Ahead.

Old Lady—Why are you not playing ball with the other little boys?

Little Boy—I muffed er fly in de lof' field, an' de capt'n chucked anodder foller in me place.

Old Lady—I wouldn't watch them play if they treated me like that.

Little Boy—I ain't watchin' 'em play; I'm waitin' till de game's over ter lick de capt'n.—New York Sun.

His Antiquity Established.

Census Taker—"How old is your father?"

"Just passed his hundredth birthday."

"Impossible!"

"Quite true."

"Can you prove it?"

"Yes. He sent some poetry to the magazines and lived to see it published."

"And he's only a hundred years old? Well, well."—Lincoln Journal.

One Good Turn, Etc.

Facetious Visitor in Newspaper Office (to editor)—May I use your brains a moment?

Editor—My brains?

Visitor (smilingly picking up scissors)—Yes, sir. Only a moment. I want to——

Editor (with great cordiality)—Certainly you may. Use them as long as you please. Always glad to furnish brains to a man who hasn't any.—Chicago Tribune.

Similitudes in Life.

"The really efficient laborer," says Thoreau, "will be found not to unduly crowd his day with work, but will saunter to his task surrounded by a wide halo of ease and leisure." We were thinking of this as we came down in our barouche this morning.—Rochester Post-Express.

Had One of the Requisites.

"Quimby, I hear, is going to branch out as a prize fighter."

"Holy Grail! He'll never make a success of it. He can't run a little bit."

"No, but he's an excellent elocutionist."—Philadelphia Record.

[illegible]

Brown—So your girl's father showed you the door!

Jones—He did.

B.—How did you feel over it?

J.—Well, I felt put out.—Boston Courier.

The Umpire's Position.

The papers are devoting a good deal of space to the discussion of the umpire's position. As nearly as we have been able to discover, the umpire's position is always an erroneous one.—Boston Transcript.

ADULTERATED DRUGS.

The Chemist the Magician of the Present Day.

RESULTS OF SYSTEMATIC ADULTERATION.

The Public are not Always Benefitted by the Processes.

In this era of universal enlightenment the training of the successful tradesman is much broader than that of his predecessor of fifty years ago. The latter considered himself fully educated when he was able to distinguish the quality of the different grades of the various articles in which he dealt, and as very few methods of sophistication and adulteration were known, his task was a comparatively easy one. With the merchant of the present day, however, everything is different. He can depend on his own judgment only in very few instances. He must know not only how to manipulate his wares so as to undersell his competitors, but he must be continually on his guard to make sure that the articles which he himself buys shall be just as represented. He may be a trader in woolens and buy his stock from the deacon who passes the plate in church, yet he never neglects to have his samples examined by an expert, and analyzed if necessary. But the strangest phase of the whole matter is that, so universal has the custom become, he does not consider it any reflection on his neighbor to take this course, and if he finds that the goods are not as represented, he thinks none the worse of him, after he has claimed and secured his rebate. No branch of trade is free from this sophistication, and as long as the resulting article is not injurious to the health of the people, we have come to accept it without a murmur, as an inevitable result of competition. With such a state of affairs, it will readily be seen that the merchant of "ye olden time" would now stand a slim chance of success unless he called in outside aid.

A NEW ADULTERATION.

The chemist is really the magician, who today is sought by one party to develop a new adulteration, and to-morrow is called upon to analyze the article which he has just succeeded in adulterating. His laboratory becomes the confessional for merchants of all degrees, and he must be as silent and secret as the clergyman. But his power is greater than the ecclesiastic, who cannot read our thoughts, and who may know only what we care to tell him. But to the chemist all facts within his province are accessible. If we are frank with him, we can render easier the work which we have for him to do. If, however, he has a suspicion that anything has been withheld, he has but to make an analysis and the whole secret is open to him. In his realm he is king. He says to the merchant, "Do thus," and the business man, realizing that his only way to success is by following such injunctions, does so, and is relieved for a time. Soon, however, he learns that he is being undersold, and once more has recourse to the magician, who finds that some brother genius has stolen his charm, and it becomes necessary for him to conjure up a more powerful one, only to have it, in time, again stolen.

The following incident, related by a distinguished chemist, may be interesting, as showing how systematically this business of adulteration is carried on. The gentleman mentioned was recently consulted by a firm of oil dealers, who were naturally anxious to learn how it was that their competitor was always able to undersell them, in face of the fact that the chemist of their factory could not discover any adulteration in their rival's product. On analysis, no foreign substance appeared, and the consulting chemist was forced to confess himself nonplused. In the course of conversation he happened to mention, quite incidentally, that the only impurity he had been able to find was a trace of petroleum oil, which he had considered accidental. The oil dealer inquired the amount of this oil present, and on finding that it was about 2½ per cent., immediately said that the problem was solved. Two and a half per cent., he explained, made in a barrel of forty gallons a difference of one gallon, and, by extracting this quantity of an oil worth fifty cents, and substituting a gallon of an inferior kind worth, say, ten cents, his rival had been enabled to draw away almost all his trade.

POISONOUS DYES.

People have become so accustomed to finding the discussion of the subject of adulteration confined to articles of food and drink that they are apt to consider that this is the only part of it of any importance. Physicians, however, can tell a different story. For instance, they are frequently consulted for disorders which can be directly traced to cheaply dyed articles of dress, and many of the most obstinate cases of skin disease are due to poisonous coloring matters.

Before the art of dyeing had progressed much most of they dyeing colors in use were prepared from simple vegetable extracts. Soon, however, the demand was greater than the supply, and the chemist was called upon for substitutes. Step by step he followed nature back to her laboratory, and finally was able to announce that he could produce at will in unlimited quantities a dye stuff which could not be distinguished by any test, either chemical or physical, from the natural product. The substance which he had made was alizarine, the coloring matter of madder, and the article from which he made it was common coal tar. This discovery worked a revolution in the industrial world. The path, once it had been pointed out, was easy to follow, and in quick succession came the announcements of new colors made from this same waste product—coal tar—until at the present day any color or tint can be supplied from it.

But here, too, the practice of sophistication soon became a prominent factor, until the question was, not how well can dyes be made, but how cheaply. The process of manufacture is a long one, and great care is required at every step to thoroughly remove the powerful chemical agents by which the necessary changes are brought about. Here was the opportunity for cheapening the final product. An incomplete removal of these chemicals means less labor and less expense; hence the indifferently finished product can be sold cheaper. Unfortunately, however, these impurities thus left in the dye are in most instances highly irritating to the skin, and when an article dyed with such substances is worn it is very liable to cause trouble, especially if the skin is chafed or scratched.—Boston Herald.

The Way Out of It.

Her Parent—Do you think, Mr. Filkins, that you can support my daughter in the style in which she is accustomed?

Bright Young Man—I think I could if you would let us board with you.—Exchange.

WHY HE TOOK THE INSULT.

Allowing His Face to Be Slapped Because a Revolver Was Pointed at Him.

"There are times," said Col. Metcalf the other day, "when men will stand any treatment, however outrageous. A man who has seen what it means to stand up before a revolver acquires a great respect for that weapon when it is in another man's hands and he has the 'drop' on you. There was nothing in the old days in the seventies which demanded reparation so quickly and so definitely as an insult. For a man to accept an insult without demanding or taking redress was to bring upon himself the scorn of the entire community. And yet I accepted the worst kind of an insult once and even to this day I blush when I think of the circumstances.

"I was in Hugo at the time and was playing billiards when a man came in and began to make a disturbance. He was a well known desperado and no one was anxious to get into trouble with him. He became so obnoxious without being checked that finally he picked up one of the billiard balls and sent it flying through a window. He was just reaching for another when I reversed my cue and placing the butt end of it in the pit of his stomach, pushed him back against the wall. The next moment I was looking down the barrel of a Colt's revolver. The sensation in such a case is simply overpowering. I was perfectly helpless, for I had no revolver myself, and if I had been wearing one he could have killed me before my hand could reach it. I thought he was going to shoot me then and there, but he chose not to do this from some whim.

"'I'm going to slap your face, Metcalf,' he said, 'so that you can tell people about it. Turn your cheek around here.'

"I looked way down the barrel of that six shooter so far that it seemed to me that I could see a bullet in its chamber. I set my teeth against the insult. I knew that I was deadly pale.

"'Turn it,' he said. 'One, two'—and I turned my cheek. I did not feel the blow, but the flame which scorched it afterward was like a furnace fire.

"'Now,' he said with a laugh, 'give me the other one. Again he counted—'one, two'—and I presented my other cheek for a second slap.

"If ever I wanted to kill a man it was that fellow, but I had no show at all. I remember the sickening feeling which ran over me at the thought that he might insist upon breaking my nose. Revolver or no revolver I do not believe I could have stood that. But I took the insults, not from him, but from a six shooter. A man can't argue against a revolver. But for months and months I longed to meet that man on even terms. I never saw him again."—New York Tribune.

Modern Literary Chances.

The aspirant for literary honors with pecuniary remuneration should remember that the most famous names in the literary guild earned their money for the most part in other than literary ways. Bryant was an editor and publisher. Longfellow and Holmes and Lowell were Harvard professors. Emerson and Bayard Taylor were lecturers, and Taylor was also a Tribune editor. Curtis and Stoddard depend upon editorial salaries; Stedman is a broker, and Hallock was John Jacob Astor's private secretary. And one might go further with this list. Whittier began as an editor, and only in middle life attempted to lean on literature alone for a support which his early savings and simple habits made possible.

It was always Longfellow's advice to young men who wished to be literary to have first, and mainly, a vocation independent of the finer muse. If a young writer thinks he possesses genius he may of course experiment with it, but it will serve his purse and peace of mind better to secure some source of labor and income that is more philistine and worldly and ride his Pegasus only at inspired intervals. For it is a fact, in spite of the occasional big figures that are given as the result of literary work, pure and simple, that the men who prosper or have prospered by that alone are only, at any one time, a few dozen in number among our sixty-five millions of people.—Ladies' Home Journal.

Don't Wear a Soft Hat.

I write against the evil of wearing soft hats. I have made this a careful study and have found that the soft hat will eventually produce baldness. The band of the soft hat being so soft and flexible that it very readily falls into every line and curve of the head, it thus excludes every particle of air, thereby producing an intense heat and rotting the roots of the hair. I find that the healthiest hat for a man to wear is the silk hat, both summer and winter, not only on account of the stiffness of the band, which prevents it from falling so close into a man's head, but because the space which is inside of it allows a free circulation of air.

In England, for instance, there are not nearly so many bald headed people as there are in this country, even in proportion to the population, but there are a great many more silk hats worn there. The young men begin to wear them there at the age of 18 years.

To show you the difference in the production of silk hats here and in England I find from the statistics that England, with a population of about 30,000,000 inhabitants, has employed in the manufacture of silk hats about 2,000 men, while the United States, with a population of more than 60,000,000, has only about 500. Can you wonder that there are so many bald headed men here?—Cor. New York Herald.

Honesty by Weight.

"Is that boy the new junior?" the president of the bank asked the cashier, pointing to a youth in the office.

"Yes, sir."

"Have you tested his honesty?"

"Yes, sir. I left him alone in your room for half an hour or more to count a pile of gold, which I told him had not been counted."

"Of course it had been counted?"

"No, sir."

"That was rather risky, wasn't it?"

"Not at all," replied the cashier; "I weighed the gold myself first."—Pittsburg Dispatch.

VALUE OF MESMERISM.

Ridiculous Things Done While in a Hypnotic State.

AN ANÆSTHETIC AS PERFECT AS ETHER.

Can Crime be Committed by the Aid of Mesmerism?

It is conceivable that mesmerism might injure an invalid. If he have heart disease, for instance, an exciting or violent episode, a rapture of joy or a convulsion of great grief or fear, it might prove injurious or even fatal, just as it might in his normal condition.

This possibility is abundantly offset by the value of mesmerism as a therapeutic agent. The responsive can be made so intoxicated on water, which he has been told is whisky, as to exhibit all symptoms of extreme inebriety; can be made disgustingly sea sick by being told that he is at sea in a storm, and can be at once physically affected by an imaginary medicine. His temperature can be changed, his eye dilated and his pulse quickened. Mesmerism is as perfect an anæsthetic as ether, and as harmless as water. Any mesmerized person can at once, by a single stroke of the hand, be rendered totally insensible to pain, and can have a tooth drawn, a cataract removed, a cancer cut out, or an arm cut off without feeling the slightest pain. This has been so often demonstrated that amputations frequently take place under its influence in the Paris hospitals, and it is successfully employed in obstetrics. Though only a fraction of patients will be found eligible as candidates for this annihilator of pain, its utility is so obvious it cannot be long before medical societies will take up the therepeusis of mesmerism as a serious study, and army surgeons will be required to have as practical a knowledge of it as of any part of the pharmacopœia.

It is quite erroneous to suppose that the conduct of the responsive is directed in detail by the operator. He only suggests the general line of thought, and each responsive pursues it according to his own knowledge, experience or prejudices. I say to my responsives, for instance, that I have a wonderful educated cow with seven heads. They all want to see it. I call their attention to the imaginary stable door near by; they look toward it, and when I snap my fingers they all see a seven headed cow enter. Now, by questioning them it becomes obvious that they all see a different cow. Unless I have designated her color one sees a white cow, another a red cow, and so on.

Then I tell them that she can dance, can waltz and keep time with music. I hand one a cane, telling him it is a flute, and that he is an eminent performer, and he goes through the motions of playing to the dancing cow. They all hear different tunes, but the exhibition is satisfactory. I now add that the cow can sing—can sing a different part with each mouth—can sing seven ballads at once. At this point there is some incredulity expressed. They see the cow stand up on her hind legs and hear the seven ballads—and this, I may as well add, is the narrative of an actual experiment.

Five of the six mesmerized persons believed that she sang. "She is singing 'Tit Willow,'" said one. "And 'A Warrior Bold,'" said another.

"I hear singing," said the incredulous one, turning to me. "'Annie Laurie,' isn't it? How do you work her—the machinery, I mean?"

The others laughed at him. "Why, the cow sings," said a young lady. "Can't you hear her sing? Can't you see her sing?"

"She looks as if she sang," conceded incredulous. "I see her mouths move all around. She sounds as if she sang; but she doesn't sing. Cows don't sing."

"Very well, what is it, then?" asked one of the others.

"A tube and a hole in the floor," said incredulous, "or perhaps ventriloquism."

"Aw!" exclaimed the first, derisively, "ventriloquism does not work like that. I've made a study of ventriloquism."

"Well, I've made a study of cow!" persisted the scoffer obstinately.

Sometimes I turn the responsives into children, and have them play school with infinite fun; sometimes transport them over ocean to Africa or Japan on the enchanted carpet, where for a brief space they enjoy all the delights of travel; sometimes we participate in battles, in political campaigns, in exciting tirade, and sometimes Socrates, Moses or Confucius is introduced and interviewed, the intelligent responsive furnishing both questions and answers in a curious dual action of the mind that is highly entertaining.

Not only the reason sometimes rebels as above, but the conscience also. As a rule responsives can be completely dominated and made to do anything of which they are physically capable. They could generally be induced to take poison, or jump off the house, or throw themselves under a locomotive, or attack one another with deadly weapons. But there are some exceptions. I was unable to overcome the fear of one of my responsives, whom I sent to assault an imaginary Indian in the park. He refused to go, and said it was "difficult to kill an Indian."

A young lady, one of the brightest sensitives I have ever seen, steadfastly refuses to play cards. I tell her she is Buffalo Bill, and easily induce her to assume his character, but when cards are suggested, "No, I never play cards. It is wrong!" she says, and I cannot move her. I could make her jump out through the window or put her hands in the fire, but play cards she will not. I was puzzled by it till, inquiring, I ascertained that her religious parents had brought her up very strictly and taught her it was "wicked to play cards."

And this brings us to the question much mooted of late, whether crime can be committed by the aid of mesmerism. If so, it is brought into relation, not only with medicine, but with jurisprudence; not only with the pharmacopœia, but the penitentiary. It is obvious that if cases of this kind occur the one to whom punishment must be dealt out is the mesmerist.

I could probably induce any one of my responsives to take his life in my presence or to assault anybody within reach, but the mind wanders curiously in this strange condition, and generally takes little cognizance of surrounding objects. I have used the word "probably" in this sentence because the conduct of mesmerized persons cannot be positively predicted. The mental impression may not in a given case be sufficiently vivid and dominating to induce action, or the intention may be counteracted by the trained moral sense asserting itself and overbalancing the confused hypnotic tendency.—W. A. Croffut in North American Review.

Brutal Policemen in Russia.

I shall never forget the first brutal exhibition of the kind I witnessed on Russian soil. It was on the docks at Baku. As the little Caspian steamer moved up to the wharf a swarm of ragged porters were seen struggling for position where they could pounce on the passengers' baggage. Gaunt, hungry looking and clad in rags, they seemed like the very off scouring of the world. Standing out in bold relief against them were a number of burley policemen. The chief duty of the latter seemed to be to abuse the former, which they did in a most unwarrantable manner.

The bluecoats did no artistic and finished tapping with the locusts, like the members of the Broadway squad, but they struck the poor, half starved wretches squarely in the face with clenched fist and kicked them in the stomachs. The burly policemen seemed to take a wanton pride in smashing the poor ragged devils in the face and in kicking them in dangerous places with their heavy topboots. As a picture of brute force unbridled, gloating over defenseless victims, it beats anything I ever saw.

It seems incredible to an Anglo-Saxon that human beings could ever be so thoroughly crushed and cowed as to submit meekly to such inexcusable brutality as the lower class Russians do. One after another the wretched victims of police brutality would go limping away, lamed or doubled up by a kick, and faces often streaming with blood. Our Russian passengers paid no sort of attention to the scene; only in the breasts of two persons present, in all that crowd, was aroused any sentiment of pity or condemnation, so far as could be seen on the surface. These two exceptions were an English war correspondent and myself.—Thomas Stevens' Letter.

Whistles of All Sorts.

The primary idea of a whistle lies in the making of a column of air to vibrate, in whatever condition. As there is no lack of means or methods for doing this, the infinite diversity of the forms of the apparatus for producing the vibrations and the resultant sounds is a matter of course. The most general form is the human whistle, which one can make sound—after a fashion—without much preliminary training; but many musicians have made themselves masters of its intonations to such a degree that, instead of the usual inharmonious and unmethodical discords, they can render with it the most difficult passages of elaborate musical notes. I shall not dwell upon the means that may be employed to make the sounds sharper and to modulate their tones. Every one knows what effects are produced by inserting the fore and second fingers so as to turn the tongue slightly back as the column of air passes over it, or by sending the blast over the outside of the bent fingers.

If we seek other primitive whistles, we have them in the hollow barreled key, the terror of authors and comedians; the famous willow whistle, cut when the twig is most sappy; the green dandelion stem, split along its length; the nut shell between the fingers; the cherry stone, which school boys grind down so patiently on the soles of the shoes and bore with a hole; the buckhorn, and all the other things which we are fond of contriving, in our early youth, with which to split the ears of our parents and teachers.—M. L. Gutode in Popular Science Monthly.

Advantages of Audible Laughter.

Man is the only audible laughing animal in existence. Girls giggle, boys te-he, women hah-ha, and men haw-haw. These are the spontaneous outbursts of jollity, and in trying to suppress it one cannot be accountable for the consequence. You have the faculty of communicating to your blind friend the reciprocal pleasure of life, therefore you have advantage over the most intelligent of the brute creation. No dumb animal has the faculty of expressing any emotion they may feel save the dog, who laughs with his tail as his long absent master returns; it seems as if he would never cease to wiggle-waggle his tail and nibble his master's beard from one ear to the other, he laughs with his tail, kisses, as it were, with his teeth, and caresses with his paws, seeming to be the exact converse of human nature. Be sure that heaven and all the cherubims are better pleased with inate goodness, rosea ate with smiles, than a face as long as your arm and as solemn as the day of judgment. Give us a bright, smiling face, indicative of the effervescence of the within. It helps us to enjoy a passing hour of blissful happiness. A new delight steals over the heart, and we willingly yield to the fleeting, fanciful dream that all of earth is surest bliss.—New York Press.

Inheritance of Moral Weakness.

"There are not too many people for the world to support," says Professor Summer; nor are there too many liable to be born; but there are by far too many of sorts that never ought to be born. He conceives that all social questions drop into this one of improved population. Mental and physical feebleness, or inferiority, is at the bottom of our troubles; but the professor must also include moral weakness, inherited like other evils, and aggravated by personal habit. Is it improbable that some degree of control may be some day established over the multiplication of diseased personalities?

Darwin dares to hint that the same care that is exercised in breeding our domestic animals might in the future be applied to humanity. Is it necessary that "Margaret, the mother of criminals," be allowed to populate the state with a breed so debased that in a few generations there are paupers, idiots, moral outcasts and beggars by the hundred, and hardly a savable person out of a score? It will not do, perhaps, at present to any more than suggest the question.—Globe Democrat.

What It Really Means.

Did you ever think what it really means to be a "tramp?" No home, no friends, no work, no chance, nobody in all the wide world to care whether you live, or die in the gutters like a dog. No heaven for such vags to inherit; no decent grave to hide them out of sight; no opportunity to be anything, and no hand stretched out to give the greeting or the good-by of love. Nobody to feel an interest in you, whether your bones ache from cold or your skin cracks with fever. No spot in all the world to call your own, not even the mud wherein your wandering footstep leaves its fleeting mark; no prospect ahead, and no unbroken link to bind you to the past. A name like a curse to blight every hope of manhood, and a reputation, like a ball and chain on your leg, to hinder the way to any good accomplishment. I tell you, when we sit right down to it, and figure out what it really means to be a tramp, I guess we will not find it so easy to withhold a piece of bread and a cup of coffee next time one calls at our door.—"Amber" in Chicago Journal.

SUSPENDED ANIMATION.

Dr. Tanner on his Much Talked of Subject.

WARNING AGAINST PREMATURE BURIAL.

Don't Bury Your Dead Until Decomposition has set in.

Eight years have gone since Dr. H. S. Tanner performed his wonderful feat of fasting forty days and nights in Clarendon hall, in New York city. For sixteen days he touched neither water nor food. After the sixteenth day he began to drink water, and subsisted on this alone during the remaining twenty-four days of his fast. The public has not heard much of the plucky little doctor for the last few years, but not long ago he turned up in Chicago, bright and chipper, a splendid specimen of a man in perfect health, and with a rotundity of form indicative rather of the bon vivant than of a man who eats only two meals a day in summer and only one in winter.

"Where have you been keeping yourself, doctor?" asked a reporter, after friendly greetings had been exchanged.

"I have just returned from New Mexico, where I have been for nearly four years, pursuing certain investigations of a scientific nature. I am much interested in the subject of suspended animation or counterfeit death. I am convinced that a far greater percentage of people are buried alive than even those who have ever given the matter much thought would be willing to believe. In no country in the world are the dead buried with such criminal haste, I may say, as in the United States. I have been looking into this subject more or less for the last twenty-five years, and the evidence I have accumulated is startling. I tell you, it is murder, horrible murder, and it is high time some agitation was started for the purpose of securing needed legislation on the subject of the burial of the dead.

THE MOVEMENT IN EUROPE.

"The principle of life is so subtle," continued the doctor, "that man with all his science knows nothing about it; and the only safeguard against the awful crime of burying alive those we love lies in the precautions that are taken against committing their bodies to the tomb before decomposition has set in. That is the only unmistakable sign that death has finally taken place. The people of Holland were among the first to awaken to the importance of this subject, and in 1764 a society was organized in Amsterdam for the purpose of looking into cases where death seemed counterfeit rather than real. In less than four years they had resuscitated—saved from entombment alive—no less than 150 persons. In 1768 the authorities at Milan and Venice, and those at Hamburg, followed the example set by Holland, and a little later similar societies were formed at London, Paris and Glasgow. As a result of the work and investigations of these societies, among the members of which were some of the foremost scientists of the times, it has been proved that in a great number of cases where every known test had been applied and preparations made for the burial the subjects had recovered. These experiences led Professor Morine, of the University of Rome, to offer a prize of 1,500 francs for the best essay on apparent death; and the Marquis d'Ouche left 20,000 francs to be used in discovering the best means that could be applied in detecting the counterfeit of death. And so in all countries statistics collated on this subject are startling, as revealing the danger of premature burial."

"Now don't you think," asked the doctor, "that this is a subject that people should discuss, should be waked up about?"

"What remedy have you to offer, doctor?"

"Simply this: I hold—and it certainly cannot be successfully contradicted—that the setting in of decomposition is the only certain sign of death. In the absence of this burial should be delayed weeks and months, if necessary, for so long as there is no decay life may hang by a feeble thread, and, by that subtleness of which I have already spoken, the recovery be spontaneous.

THE DOCTOR WILL HIBERNATE.

"Another discovery that I have made," said the doctor, "is that hibernating animals do not use their lungs during the period of hibernation. For several years I have been studying the habits of this class of animals, and, do you know, I am about convinced that man can hibernate"——

Here the reporter must have looked the incredulity he felt, for the doctor hastened to explain: "Take the bear for example; its organs of respiration are the same as man's, and it hibernates for months without food or drink. I have also been studying the philosophy of the adepts who used to be able to go into the death trance at will. Their preparation for this was long fasting, and the trance condition following was, in my opinion, a season of hibernation. I am studying now with a view of making some experiments in this line, and the time may come when I will permit myself to be sealed up in an air tight coffin and laid away until such time as I shall designate for it to be opened."

"But, doctor, you will not expect to come out of a test like that alive, will you?"

"Yes, indeed," was the earnest reply. "I have twice been near the portals of the tomb in my studies of this subject of life principle and of suspended animation, and I firmly believe I can go still nearer—that I can to all outward appearances be dead, and, remaining that way for a length of time, can still come back a living witness of the truth of my theories and investigations."

Speaking of his fast, he said: "The fact is, with most people the body rules the mind, while the reverse should be the case—the mind should control the body. Appetite, and it may be a depraved one, clamors for this or that desired article, and people rush off to gratify it. When I began my forty days' fasting I said to my stomach: 'Here, old fellow, I have a job for you. I want you to take a good long rest, and I want no grumbling about it.' That settled it. At 10 o'clock of the last day of my fast, when I had only two hours to go, a little child that was in the room where I was thrust a ripe peach under my nose. If Adam was tempted as I was then I do not wonder that he fell. I had so little longer to go without eating that I relaxed my will power, and truly my greatest sufferings were during the last two hours of my fast."—Chicago Tribune.

A Wise Tramp.

A tramp's notebook, picked up on the Essex road, contained, among other sage reflections, the following bit of wisdom: "Its a grate eel beter to have yure shins barked than bit."—Burlington Free Press.

INDEPENDENCE, CAL.

FRIDAY, JANUARY 9 1891

County Official Paper.

It is a pity Governor Waterman didn't have a few weeks longer in office. Had he remained in and kept up his kick he would have saved the State great expense by pardoning all the criminals at San Quentin and Folsom.

The "well" in the State Capitol at Sacramento is the scene of more howling drunks at each session of the Legislature than any other dive in the City. A law stands upon the Statute books that prohibits the sale of liquors within the Capitol building, but the law makers are a law unto themselves, and the fun in the dive goes on at each session of the Legislature. None should be so ready to laugh at laws as the law makers, for no others know so well what a farce most law making is.

County Superintendents very generally condemn the State series of school books. Our own County Suderintengent, Mr. J. H. Shannon, is among those who find serious fault with the books. It is alleged that most of the series are of poor merit and evidently prepared by incompetent persons, that the arrangement of courses is bad and such as makes teaching more difficult than with the books formerly used. It may be that the books of the State series are not so good as they might be; but the scandals connected with the 'old contract system' andthe expense of endless changes had become intolerable. Time will improve the State series and we had better let the system alone than go back to old evils.

The "Record-Union" urges the people of Sacramento not to continue the blackmailing practices of former years, when members of the Legislature were importuned incessantly to buy tickets for raffles, church fairs and endless devices to extort money from them. Perhaps Sacramento is no worse in this particular than other State Capitals; but all who have ever served in the Legislature will bear testimony that this incessant begging and importunity for money is an intolerable nuisance. As the beggars are mostly respectable looking people and a majority of them women, it is all the more difficult to get rid of them. If the "Record Union" can abate this nuisance it will do the city a good service.

A cry is being raised for a constitutional convention on the alleged ground that the present constitution is too faulty to be amended. The cry is raised by two classes, visionary cranks and political schemers. All who remember the bitterness and turmoil that preceded the last convention and the demagoguery and hoodlumism that prevailed all through the convention, will be in no hurry repeat the experience. The constitution can be amended, and certainly some amendments are necessary. One of the worst humbugs that ever existed is the Board of Railroad Commisioners, and this should be wiped out. Another folly is the taxation of mortgages, and this should be abolished. These and all other defects of the constitution can be remedied by amendment.

The Editor of this paper recently had opportunity to hear the opinions of merchants and shippers in other parts of the State on the workings of the Railroad Commission. All who discussed the subject were agreed that in every case within their knowledge, when a grievance was felt or a concession wanted, the best satisfaction was got by appealing direct to the railroad managers. In every instance parties so appealing were courteously received, listened to patiently and where a wrong was shown it was promptly righted, or a privilege asked, it was granted if reasonable and possible. When the Railroad Commissioners were first appealed to interminable delays followed, and in the end nothing was granted that could be avoided. Since the day the Commision was organized it has been nothing but a great expense, a continued scandal and the cause of much hard feeling between the people and railroad managers, and the sooner it is abolished the better.

Stealing the livery of heaven to serve the devil is an old practice still in use. In the town of Truckee certain men got up a petition to have disreputable characters removed. Some of these owned houses and lots. The citizens were induced to buy these properties, in some cases paying twice the actual value. The men who were most active in the matter owned some worthless land across the Truckee river from the town, and as soon as the disreputable characters had got their money, these men sold them lots where houses were built and where worse dens are now kept than were closed up in the town. If these Truckee men had been church members, oh what a howl there would have been about hypocrisy! But as it is they are accounted sharp business men, and their respectability is increased by the increase of their bank account

Grewsome Photography.

Monday afternoon about 3:30 o'clock Undertaker Harvey's gloomy wagon drove hurriedly up to the entrance of a well known photograph gallery and two men carried a black coffin into the building and up to the floor in the operating room. It was met there by the photographer and a number of newspaper men, and shortly afterward a woman, youthful and beautiful, clad in cashmere and lace, with flowers at her feet and her white hands folded peacefully across her breast, lay in the somber box, with her long brown hair streaming over the crampled satin lining, as pale as her cream tinted skin.

The men stood about the coffin whispering as the undertaker touched a flower here, a leaf there, and tucked in a careless wandering curl, while the photographer moved a hand out of its stiffness or turned the face where the light would fall upon it to a better effect before the lens of the camera. It was an uncanny scene, and if the sunshine had not taken the chill off of the place it would have been as ghostly and ghastly as a charnel house.

When all was ready the photographer caught the picture on his plate and then the lid of the affair was removed for the friends of the family to step forward and take a last look at the body, for it immediately sat up in its casements, shook hands all around, and jumping gracefully to the floor, laughed merrily and talked cheerily of such a lark, and gave the undertaker and photographer her authority to perform the same sad rites when she was dead in earnest, and not merely flirting with the king of terrors. The ruling passion, strong in death, it will be observed. The corpse for a minute was Miss Lillian Lewis, the actress, and the pictures, when they are done, will be striking, even if they are not particularly cheerful.—Washington Star.

A Novelty for Tea.

Rose biscottines are indeed a novelty, and if properly made are far superior to the world famous Shrewsbury cakes. For 5 o'clock tea they are a decided innovation and are unique in every way. Those who would make these lovely little morsels to perfection must keep exclusively to the proportions of the different ingredients and likewise be careful that the biscottines are not overbaked nor burnt in any way. Take

One pound fine, dry pastry flour.
Eight ounces Castor sugar.
Eight ounces butter (fresh).
One-half ounce finely sifted biscuit powder.
A hock glassful of rose water.
Two eggs.

The flour and biscuit powder should be sifted together, and then the other ingredients well rubbed into them. The sugar should now be mixed thoroughly, and a space made in the center of the lot, in which the eggs and rose water should be poured. Stir everything well together and produce a nice, firm, stiff paste. Roll this out into a sheet rather less than one-eighth of an inch thick, and then stamp the biscottines out of it with a small, fluted edged, oval hand cutter. Now lay these cakes on butter baking tins, put them in a warm oven, and keep them there till quite done.

By rolling the above dough out only the thickness of stout note paper, and baking the biscottines very lightly indeed—only about twenty seconds in a good hot oven—the result will be beautiful wafers to take with ices.—New York Letter.

Salmon P. Chase's Diary.

Kate Chase is still a very fine looking woman. She looks ten years younger than she really is, and she works as hard as any woman in Washington. She is writing a life of her father, and her work will be full of unwritten history. In addition to her wonderful reminiscences gathered during a period covering a quarter of a century, in which she was in the closest confidential relation with the greatest statesmen and generals of her day, she has bushels of letters made up of private correspondence of public men and she has her father's diary and letters.

Not long ago she said that she considered this diary one of the most important historical papers in existence. She keeps it in a fireproof vault, and she will quote very freely from it in her work. Salmon P. Chase kept a diary throughout his whole public career. He had it in his bedroom, and he jotted down his memoranda in it of the occurrences of the day every night before he retired. It is probably as valuable as the diary of John Quincy Adams.—Frank G. Carpenter in Chicago Herald.

Bridesmaids in Black.

Chilian young ladies have been literally plunged into mourning by an edict of the archbishop of Santiago, who has decreed that no bridesmaid in his diocese shall appear in any color but black, which somber attire, however, they are to be permitted to relieve with white gloves and veils. One cannot but sympathize with the Santiagian girls, whose wits will be sorely taxed to devise anything really becoming in "suits of solemn black." But the news will doubtless be welcome enough to intending Chilian Benedicts, for the archbishop's prohibition will, I should say, bring about the abolition of bridesmaids, and the customary gifts to these attendants will of course cease at the same time. Even if brides to be adopt our idea of having pages in attendance, the expense will be considerably lessened, for small boys are, after all, much more reasonably supplied with souvenirs of these occasions than grown up girls.—Lady's Pictorial.

Playing with a Snake.

At Somerville, N. J., the other day, the 2-year-old baby of William Porter was found seated on the kitchen floor playing with a flat headed adder three feet long. The infant laughed and crowed gleefully as the serpent coiled its sinuous length around its throat and arms. The mother of the babe screamed and fainted at the sight, but a neighbor ran in and enticed the snake away with a bowl of warm milk. The little one had been stroking the serpent's body, and the snake had apparently enjoyed the sensation, as it made no demonstration of anger.—New York Times.

WOMEN IN MEN'S CLUBS.

Some Swell New York and Boston Clubs Make Special Provision for Them.

A veritable revolution is slowly taking place in the realms of clubdom. If any one had suggested the possibility of ladies being received in aristocratic male clubs a few years ago he would have been considered a most promising candidate for Bedlam. Despite this fact, two of the most fashionable and exclusive clubs in New York city and one club of the same character in Brooklyn make provision for the reception and entertainment of the wives and daughters of their members; a third New York club will soon be added to the list of the clubs which have sanctioned the innovation, and other clubs are looking in that direction.

The revolution was started by the famous Somerset club, of Boston, than which there is no more exclusive and conservatine club organization in America. This club among clubs decided about eight years ago to fit up a suite of rooms exclusively for the accommodation of ladies, and provided a private entrance to this suite of rooms, which are entirely isolated from other parts of the club. The wife or daughter of a member was permitted to introduce other ladies as her guests, the sole restriction being that she should in her own handwriting enter the names of her guests in a book kept for the purpose. The innovation won the immediate approval of the social circles so largely represented in the Somerset club, and speedily became one of the distinctive features of that organization.

When the Hamilton club, of Brooklyn, was incorporated it adopted this feature, and shortly after, when the Lawyers' club was established in the Equitable building, the same system was adopted on a much broader scale. The Lawyers' club set aside private dining rooms, a public dining room, a ladies' parlor, boudoir and bathroom for the use of wives and daughters of its members, and subsequently placed them in charge of experienced ladies' maids, who are always in attendance. No gentleman is ever admitted to these rooms unless he is accompanied by a lady. Upon his election to the Lawyers' club a member fills out a blank with the names of the ladies of his family to whom he wishes to have the privileges of the club extended.

The names so entered are copied upon a register, and thereafter the ladies named by the member have the freedom of the suite of rooms set apart for the use of their sex. They can gain admittance to these rooms at any time during the day, can meet other ladies there by appointment, can lunch or dine there, or can entertain friends at luncheon if they so desire. No check is ever presented to them, but the amount of indebtedness which they incur is charged to the member of the club at whose instance they are introduced.

The somewhat remarkable departure has worked admirably, and has given entire satisfaction to the most conservative members of the club. A somewhat similar custom is in vogue at the rooms of the Riding club, and there, too, it has met with favor. Although the fact is not generally known, a proposition to buy the house on Twenty-first street, next to the Dix property, on which the annex to the Union club is now building, and to fit it up for the use of the wives and daughters of the Union club men, was broached at the time of the Union club's acquisition of the Dix property.

The proposition did not go through, to be sure, but the mere fact that it was made in so conservative a club as the Union club shows the hold which the innovation introduced by the Somerset club has taken on club men. That it will be generally adopted by the better class of social clubs before many years there can be little doubt. And that it will tend to mitigate the asperity with which the feminine sex regards the clubs to which their husbands and brothers belong there can be less doubt.—New York Sun.

Pictures of Beauties.

Remarkable success has been attained by Professor Ahn, of Breslau, in applying photography to fix the indications of different diseases of the eye. Another contribution to one of the newest departments of science are Professor Fischer's photographs of cultivations of luminous bacteria, which were photographed by their own light, the views giving evidence of the constant movement in which the tiny organisms are unceasingly engaged. One of the greatest anthropologists of the century in Paris has been making a collection of the various types of mankind, and he does it by means of the photograph.

He inclines to the opinion that the type or origin, the race to which the party originally belonged, is better preserved among women than among men. He has therefore made his collection from among women, and to increase its attractiveness and value he has announced his intention to choose only beautiful women for his types. Apropos of this idea a prominent photographer proposes to appeal to photographers for selection and contribution of a photographic reproduction of the representative women whom they consider the most beautiful, so that a collection can be made which will be handed down to posterity as representing the standard types of beauty in the Nineteenth century.—New York Commercial Advertiser.

Teaching Children to Play.

Some philanthropic women have established a "Children's Happy Evening association" in the east end of London. They have secured for two hours at evening the use of unoccupied school houses, where they gather the poor little children from the wretched labyrinths of the city and teach them (for many of them do not know) how to play the simple games which are supposed to be familiar to children the world over.—London Letter.

A traveler has discovered that brunettes are not the rule in Spain. Many Spanish women are fair, with blue eyes, especially in Cadiz, while even the Easque women often have auburn hair.

Reckless Extravagance.

Miss Prudence—Those Livewelles will certainly come to grief.

Miss Patience—Why so?

Miss Prudence—At dinner last evening their chief dish was a great plate of apple sauce.—Pittsburg Bulletin.

Leprosy in India.

The latest statistics show that there are 71,287 lepers in Bengal, 13,944 in Madras and 13,842 in Bombay. The lepers in the native states are not included in these totals.—Philadelphia Ledger.

Cordelia M. Miller vs. W. K. Miller—Decree of divorce granted.

Broder et als. vs. Conklin et al—Filed Judgment for Plaintiffs aggregating $129,957.27 and costs.

TUESDAY, January 6th.

Nathan Rhine vs. A. W. H. Smith and J. White Smith—Filed complaint. Issued summons and writ of attachment.

WEDNESDAY, January 7th.

Frank E. Dansmore and L. C. Hall admitted on examination to practice in the Superior Court.

DIED.

NEWBILL—At Daggett, Cal., January 5th, P. H. Newbill, aged about 65 years.—Deceased was the father of Mrs. W. L. Hunter, of Georges Creek.

Mr. J. W. P. Laird got home from Bakersfield at the beginning of last week.

Mr. E. Walker came up from Olancha last Monday and was in town a few days.

Mr. J. R. Eldred and family have gone to Big Pine. Mr. Eldred will go into a blacksmith business.

R. S. Miner Esq is at Independence. He is conducting some important business in the Superior Court.

Mr. John C. Eldy of Darwin was taken very sick last week and was exceedingly weak at last reports.

The new County officials assumed the duties of their several offices on Monday, and business at the Court House goes along smoothly.

Mr. John Anton has leased the bar-room of the Lake View Hotel at Keeler. John has a pleasant greeting for visitors and will serve up the best of everything in his line of business.

Mr. John Barnes continues to manage the Lake View Hotel, and all guests are treated with the kindness and attention that are never wanting on the part of Mr. and Mrs. Barnes.

Large shipments of marble continue to be made from the marble quarry. A great deal of machinery has been added to the mill at Verdi, and the mill is kept steadily running to its full capacity.

Three days ago a strong north wind began to blow and still continues. A good deal of ice has formed in the streams. The nights are very cold but bright sunshine makes the days pleasant enough.

In the advertising columns will be found the cards of the new county officers, Messrs. Gorman, Yandell and Forbes. The gentlemen have all settled themselves in their new positions and county affairs are proceeding smoothly.

A locomotive was coming down the C. & C. last Saturday and when near Hamil Station ran into a hand-car. One Chinaman was killed and another injured so badly that it was expected he would die.

Hon. R. E. Arick, late Superior Judge of Kern County, died at Bakersfield December 31st. During the trial of the Elliot case the Judge was so sick that he was not able to finish the trial; he suffered from dropsy. Judge Arick had been elected to succeed himself. He was the first Mayor of Virginia city Nevada.

Sheriff Gorman is determined if possible to stop the vile business of selling liquor to Indians. He will pay a reward of forty dollars for information that will secure the conviction of any one guilty of this crime. This reward will be paid out of his own pocket.

The two young lawyers who were admitted to the bar by Judge Gill last Wednesday should now begin diligent practice and close study of the game of whist. All the Justices of the United States Supreme Court are crack whist players and none but good players will be promoted to that august position.

The Los Angeles *Herald* says that at Santa Monica during the past two weeks the Pacific ocean has been rough and a northerly wind has made it unusually unpleasant for bathing at this season. On the Atlantic Coast no complaint is made at this season about the ocean being too rough or the weather too cold for bathing.

It is announced that the first of Pennington's air ships, built for the Mount Carmel Aeronautic Navigation Company would start about January 1st from Mount Carmel for New York, via Chicago and St. Louis. Possibly the date may be postponed to April 1st owing to circumstances beyond control, and which no gift of prescience could have foreseen.

Postponed.

The case of Manuel Leon, accused of murder, was called for examination on Tuesday. Justice of Peace, John Baxter, who issued the warrant of arrest was sick and unable conduct the examination, and by request C. Mulholland, Justice of Peace, presided. John W. P. Laird Esq., appeared as counsel for Leon. Mr. Laird said he had just then been engaged as counsel in the case, and had not yet been given any opportunity to study it, and asked for a postponement. District Attorney Forbes said he had not secured an interpreter, and as most of the witnesses are Indians it would be necessary to have one. The case was therefore postponed until January 19th inst.

SUPERVISORS' PROCEEDINGS.

MONDAY, January 5th.

The Board of Supervisors of Inyo County, State of California, met in regular session at 7 o'clock, p. m.

Present Supervisors Sneden, Steward, Stewart and Love. Absent, Supervisor Eddy.

J. J. Stewart was elected Chairman of the Board by unanimous vote.

It was ordered by a unanimous vote of of the Board that Ordinance No. 31 be and is hereby repealed and another Ordinance No. 32 be enacted.

The following claims were allowed:

J. B. Steward	$14 10
R. Love	21 00
S. G. Sneden	18 80
J. J. Stewart	10 80

Whereupon the Board adjourned.

CORRESPONDENCE.

STATE OF CALIFORNIA,
Department Pub. Inst.
SACRAMENTO, Dec. 26th.

ED. INDEPENDENT: I mail you a copy of the Fourteenth Biennial Report of the Superintendent of Public Instruction. An examination of the statistics will show that the increase in the number of census children in the State during the past two years was 10,382. The increase in the average number belonging to the schools, for the same time, was 15,714. The increase in the daily attendance was 14,365, thus showing that the daily average attendence was increased by 3,980 more than the total increase in the census rolls for the same time. During the past two years 381 new school houses have been erected, the total number in the State now being 3121, of which 115 are of brick. Increase in number of teachers, 496. Increase in the number of teachers, graduates of Normal schools, 328. Increase in number of volumes in school libraries, 77,050. Increase in number of visits by County Superintendents, 831. Increase in the number of teachers attending institutes, 631. Increase in number of school visits by Trustees, 3,930. Increase in number of school visits by parents and friends, 32,116. Increase in value of school property, $3,050,363. Total value of school property in the State, $13,624,143. In retiring from office I desire to express my sincere thanks to you and the public press of the State generally for the cordial courtesies which you have extended to me during the past four years and the encouraging, friendly helpfulness which you have given to all engaged in promoting the interests of public schools.

Very sincerely yours,
IRA G. HORR,
Supt. Pub. Ins.

Mining Notes.

Mining business in the county is not very lively at present, but this is usual every winter. The Newtown mine at Cerro Gordo is turning out a good deal of ore; prospecting goes on in the Union but no rich strikes are yet reported. Very little is doing in the Darwin district; Mr. McKenzie has a small force at work in the Lucky Jim but is not taking out much ore. Shipments continue to be made from the Defiance and about fifteen men are working there. Regular shipments are made from Modock, most of the ore at present being taken from the dumps. Mr. Fitzgerald has about a dozen men at work in the mine. It is reported that Mr. J. J. Gann has recently struck a good prospect in the Minnietta. Pat Kelly is doing first rate at the White Hill and has two carloads of fine ore ready for shipment.

Lee District has been regarded as one of the most promising mining regions in the county. It is somewhat isolated however, and this has retarded development. For some weeks past Mr. S. W. Buck of Keeler has been doing some prospecting there, and recently some rich ore was struck. A sample lot was sent to Mr. James A. McKenzie of Darwin, for assay, and he gave the following as the result, 1,068.41 ounces of silver per ton. All Inyo miners know how thoroughly reliable an assayer Mr. McKenzie is. Mr. Buck says he has five tons of ore similar to assay sample ready for shipment. The mine is called the True Blue, and was first located by Charles E. McEvoy, several years ago. Very little work had been done upon the mine before Mr. Buck began operations.

Meteorological Summary.

Following is the report of the Signal Service Station at Keeler for the month of December, 1890.

Mean barometer	30.134
Highest barometer	30.436
Lowest barometer	29.510
Mean temperature	42.5
Highest temperature, 4th	61.
Lowest temperature, 8th	29.
Greatest daily range temperature, 4th,	26.
Least daily range temperature, 4th,	10.
Prevailing direction of wind,	E.
Total movement of wind,	3620 miles.
Extreme velocity of wind, direction and date,	41 miles on 31.
Total precipitation,	0.22 inches.
Number of days on which .01 inch or more of precipitation fell,	3.
Number of cloudless days	11
Partly cloudy days	6
Cloudy days	14

W. C. WILKINSON,
Sergt., Signal Corps, Observer.

Short of Snow.

Up to this time there is but little snow on the Sierra Nevada mountains. It can be seen from Owens Valley that the great canyons up near the top of the mountains have much short of their usual store of snow at this season. There is yet plenty of time for a vast quantity of snow to fall, and January and Feburary are usually snowy months. But the season so far has been a dry one, and the cloudless skies and bright sunshine continue without sign of change. For months past the rivers on the west side of the mountains have been carrying vast quantities of water, and all of it running to waste. With storage reservoirs enough water could have been saved to irrigate the whole east side of the San Joaquin Valley and now that vast region is threatened with a drought.

Murder Trial.

John P. Lee was tried at Bridgeport last week for the murder of W. H. Keinborts at Bodie on the 9th of November. Lee is the stepson of Keinborts. The jury disagreed and were discharged, and a new trial has been ordered, to be had on February 5th. The trial appears to have been conducted in a remarkable manner. The *Chronicle-Union* says the Attorney for the prosecution closing, Attorney W. O. Parker for the defense, moved the Court, without putting in any evidence, that the jury be advised to render a verdict of "acquittal" on the grounds that no venue had been shown. It was so ordered and the jury retired, but returned in about twenty minutes and asked to have the trial proceed. The trial then went on with the result stated. This is certainly a remarkable proceeding in a criminal trial.

Sheriff Gorman has moved his family into town and occupies the place where Mr. J. J. Moore recently lived.

Mr. B. M. Rogers of Truckee and Mr. H. Berry of Carson Valley came to Independence on Wednesday. They are looking around for land with intention to buy, partially improved places being preferred.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Sec 2324 Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.

Dated Cerro Gordo, January 2, 1890.

ORDINANCE No. 32

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

SECTION 1. The regular meetings of the Board of Supervisors of Inyo County, State of California, must and shall be held at the Town of Independence, in the County and State aforesaid, being the County Seat of said County on the first Monday of February, May, August and November of each year, and must continue from time to time until all the business before the said Board is disposed of. Such other meetings must be held as are otherwise provided by law.

SECTION 2. This ordinance shall take effect and be in force on and after fifteen (15) days from its passage, and Ordinance No. 31 of said Board of Supervisors together with all ordinances or parts of ordinances in conflict herewith, are each and all of them hereby repealed.

SECTION 3. This ordinance shall be published in the INYO INDEPENDENT, a newspaper published in said Inyo County, at least two weeks, said publication to be made for said time and before the expiration of said fifteen days.

This ordinance was passed by the Board of Supervisors of said Inyo County, State aforesaid, at a regular meeting of said Board, held on January 5th, 1891, by the following Vote:

AYES—J. J. Stewart, Seth G. Sneden, R. Love and J. B. Steward.

Supervisor Eddy not being present.

{SEAL} Attest: JOHN N. YANDELL, Clerk of said Board of Supervisors.

By ALEXANDER CLARK, Deputy Clerk.

J. J. STEWART,
Chairman.
SETH G. SNEDEN,
ROBERT LOVE,
J. B. STEWARD.

[ENDORSED.]

ORDINANCE NO. 32.

Filed and recorded January 5th, 1891, in Ordinance Book "B" on page 71 et seq.
JOHN N. YANDELL, Clerk.
by ALEXANDER CLARK, Deputy Clerk.

Proposals for Care of Indigent Sick of Inyo County.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until 10 o'clock A.M. on Wednesday, Feb 4 1891, to contract for the care of said indigent sick for the term of one year from May 10th 1891 to May 10th, 1892. Said bids to designate the amount for which parties contracting will care for said indigent sick on the basis of an average of four patients per day throughout the year, and to include all medicine, nursing, board, lodging and washing. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care.

Said contractor to care for all the indigent sick properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for, said excess to be paid for by extra allowance on presentation of bills duly sworn to, at the regular meeting of said Board immediately after said contract has expired. The average four per day to be paid for at the regular meetings of the Board on presentation of bills duly verified. All payments to be made by warrants drawn upon the Hospital Fund of said county.

The person or persons to whom said contract shall be awarded shall give a good and sufficient bond in double the sum of the contract price, for the faithful performance of said contract.

The care and management of said indigent sick by such contractor shall be at all times subject to the inspection of said Board of Supervisors, or any member thereof, or any person appointed by the Board for such purpose.

Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of ten o'clock and twelve o'clock A. M., on the 4th day of Feb. 1891, and the Board reserves the right to reject any and all bids. JOHN N. YANDELL, Clerk.

FREE. OUR NEW $35 Solid Gold Watch FREE. Worth $100.00, just as watch in the world. Perfect timekeeper. Warranted heavy, solid gold hunting cases. Both ladies' and gent's sizes, with works and cases of equal value. ONE PERSON in each locality can secure one free, together with our large and valuable line of Household Samples. These samples, as well as the watch, are free. All the work you need do is to show what we send you to those who call—your friends and neighbors and those about you—that always results in valuable trade for us, which holds for years when once started, and thus we are repaid. We pay all expenses, freight, etc. After you know all, if you would like to go to work for us, you can earn from $20 to $50 per week and upwards. Address, Stinson & Co., Box 812, Portland, Maine.

THOMAS & HILL.

Brimful of confidence in it—the manufacturers of Dr. Sage's Catarrh Remedy. It's a faith that means business, too—it's backed up by money. This is what they offer: $500 reward for a case of Catarrh which they cannot cure. They mean it. They're willing to take the risk—they know their medicine. By its mild, soothing, cleansing and healing properties, it produces perfect and permanent cures of the worst cases of chronic Catarrh in the Head. It's doing it every day, where verything else has failed. No matter how bad your case, or of how long standing, you can be cured. You're sure of that—or of $500. You can't have both, but you'll have one or the other.

At Table—Johnny—How d'yer expect a boy to be thankful when he's only had two pieces of pie? Mamma—Wait until to-morrow, Johnny, and you will see.

A man who has practiced medicine for 40 years ought to know salt from sugar; read what he says:

TOLEDO, O., Jan. 10, 1887.

Messrs. F. J. Cheney & Co.—Gentlemen:—I have been in the general practice of medicine for most 40 years, and would say that in all my practice and experience have never seen a preparation that I could prescribe with as much confidence of success as I can Hall's Catarrh Cure, manufactured by you. I have prescribed it a great many times and its effect is wonderful, and would say in conclusion that I have yet to find a case of Catarrh that it would not cure, if they would take it according to directions.

Yours Truly,
L. L. GORSUCH, M. D.
Office, 215 Summit St.

We will give $100 for any case of Catarrh that can not be cured with Hall's Catarrh Cure. Taken internally.

SELLING BY PHOTO.

Cause of the Decline of the Drummer's Grip.

SAMPLES HAVE GIVEN WAY TO PHOTOS.

Colored Presentments of Intricate Mechanisms.

The commercial tourist is being divorced from his traveling bags, or, to speak more tersely, the drummer is dropping his "grips." The only infallible mark of the drummer will now be the pockets which bulge with paper covered novels. The cause of the decline of the gripsack is the colored photograph. The bulky samples that the traveling man used to bear from place to place, and which were, so to speak, his badge of office, he has replaced with counterfeit presentments of the same.

Delicate, true, light and compact, these pictures, carried about in the pocket, can represent an immense quantity of goods in such a manner that there is no mistaking tint, quality, texture or size. They represent everything from machinery to bric-a-brac and from kitchen stoves to ladies' slippers. Those which need no coloring—like the stoves and machinery—are simply photographed in black and white. But the photographs are the very best of their kind, and set forth each part with a faithfulness that is remarkable. In the most intricate machinery every bit of belting, every wheel, cog, arm and elbow is most understandably produced from every point of view.

But the inviting albums are those which contain the colored photographs. These are used in particularly large quantities by the crockery and the furniture houses. The former find use for them because their wares are so fragile; the latter because they are so cumbersome. The pictures of the bric-a-brac and the fine china are wonderfully delicate, and it is a surprise to learn that the microscope is never used in the painting of them. The work is done entirely by young women. One photographer keeps eight or ten quite steadily employed. The work is taken to the houses of the artists, and done there as a usual thing. It requires much more art than the ordinary painter of photographs uses in putting a touch of carmine on the checks or a dash of azure on the eyes of a portrait. The painting of texture is several degrees above this, and this must be thoroughly understood. The soft satin wear, the Worcester and royal Dresden, the queen and Bohemian, the clays and porcelains, all have a very different finish, which must be preserved in the photograph if it is to be of any value. It needs not only accurate but strong eyes, a steady and delicate touch, and a most painstaking patience.

Young women are the very ones out of all the world in whom all of these qualities are combined, and that is the reason that this pretty toil is given them so universally.

But there is another reason—an old, familiar reason. A man could not make enough to keep him. The work must be done by girls who have homes. To be sure, one can make $2.50 a day at the coloring of the photographs of china or bric-a-brac, and now and then by working over hours and very steadily it might be possible to make $4. Such arduous work could hardly be repeated on two successive days, however. But, though this wage is not bad, it has the drawback of being fluctuating and unreliable. One week there may be quantities of work, the next week none at all.

One of the conditions of successful photograph painting of this fine nature is absolute silence. A positive concentration of the faculties is needed, and most of the girls who do the work have little studios where they can quietly work by themselves. Here, with big aprons protecting their dresses, their photographs set on a little inclined board before them, and their case of liquid paints close at hand, they patiently strain their young eyes over the almost infinitesimal figures which they are coloring. It is very confining, and no doubt the spasmodic demands are blessings in disguise, for continued application to it would be apt to tell seriously upon the nervous system.

The tinting of the photographs of furniture is simpler on the whole, although many wholesale houses have their furniture upholstered in cretonne before it is photographed. Cretonne, of course, admits of coloring, which plush does not.

The business is one which is likely to increase steadily and to extend to many branches of commerce which have not yet investigated it.

This fact has been recognized by the deaf mute school on the west side, and the art of coloring commercial photographs is among the industries in which the pupils are being instructed. The abnormal development of sight and touch which all deaf mutes possess makes them especially fitted for this work.

A woman who was one of the first to advise teaching artistic branches in this school said the other day: "No one who has not watched the development of these children can imagine what a difference the introduction of the light arts has made in their lives. They have gained in self-respect, as well as in enjoyment of life. Many of them had been regarded as little less than imbeciles in their own homes, and some had been the recipients of all the cuffs and kicks that that an ill-natured household chose to bestow upon them. At the very best they were considered a great cross.

"In the school, after a thorough system of communication had been established, we instructed them in the common branches and then gave them an industrial course. The girls were taught dressmaking, the boys carpentering. But it seemed to us finally that we were making a mistake in putting them in competition with such a great number as overcrowd these trades. As an experiment, we put a teacher in modeling in the school. You can imagine nothing more touching than the scene the first morning we gave them the clay. They took to it as ducks do to water. There was nothing of the awkwardness in handling it which most children show at first. Why, they began making things of their own accord immediately, and some of the faces which had always been as blank as a wall previously were lit up with a sudden vivacity. It was the same with drawing, for which we engaged a teacher from the Art institute. From these experiments we gathered courage. We perceived that we could make engravers, designers, wood carvers, architects and decorators out of our poor unfortunate children, and in time we shall try to do all that."—Chicago Times.

A Sure Cure.

First Crook—I've got a soft snap now; safe, too, right within the law. Did you notice those "how to get thin" advertisements in the papers?

Second Crook—By jinks! Is them yours? What do you send in return for the half dollar?

Second Crook—Country board circulars.—The Cartoon.

A Great Favor.

Dumley—I say, Brown, as a great favor, would you mind putting your name on the back of my note for thirty days?

Brown (dubiously)—Why, I s'pose so, Dumley. Where will you make the note payable?

Dumley—Anywhere you like, old man; that's your business, not mine.—New York Sun.

How He Got There.

Friend (to dentist)—Now that you've got the custom house job you were after I s'pose you'll give up pulling teeth?

Dentist—Yes, indeedy.

"How did you manage to get that job, Charley?"

"I had a strong pull."—Texas Siftings.

Sobering the Tipsy Officers.

A Russian officer gives the following account of an incident which happened during the Tekke campaign, while he and his soldiers lay encamped before the enemy, who might at any moment attack them. Some of the officers had gone to the tent of a comrade to drink tea, and after tea they had a second course, consisting of cognac and wine. Soon the camp rang with songs.

I dispatched my orderly, with a request that the officers cease singing; but he presently returned, saying that they anxiously desired permission to continue.

What could be done? To remonstrate further with them might, in their present condition, result in unpleasantness. As I meditated, the subaltern on duty came up and said to me, in a whisper:

"Your honor, let one of the sentinels fire!"

"What do you mean?"

"I mean fire along the line, as though at the enemy," he explained, with a smile.

I guessed at his meaning, and was highly delighted with it; only an alarm could sober the carousing officers.

"See to it," I said. "Be prudent; don't babble."

I went to my tent and lay down on my bed, that I might not seem to be expecting anything. Five minutes later, from some place far away in the line of sentinels, rang out a dull discharge. It was echoed by another near by, followed by a third and fourth. Shouts were heard, "Ala-arm!"

The drummer sprang out of a neighboring tent, and beat the alarm. The songs ceased in an instant. Cries and exclamations rang out.

"Where's my cap?"

"Where's my sword?"

"There it is yonder! Give it here!"

"We must run down there as soon as possible!"

The shots became more frequent. The drummer continued to beat with increasing vigor. The garrison rushed from their tents, and took their places along the earthworks. Soon everything quieted down. I made the rounds of the fortifications, and found the officers at their posts.

For a quarter of an hour we stood thus, in expectation of an attack; then I dismissed the company to their places, and the camp returned to silence.—Youth's Companion.

Some Peculiarities of Indians.

If an Indian is killed in a quarrel his relatives are usually appeased by payment. I remember once an overbearing young Assinaboine buck came into the Milk River agency and bent his bow and arrow on the agent's pet dog. The agent warned him if he shot the dog he would kill the Indian. The young buck shot his arrow; the agent killed him. We expected to have some trouble, but the grief stricken father came forward on behalf of the relatives, and claimed that, in consideration that the young man, being such a good buffalo runner, the agent must pay for the loss of such a person a red blanket, a piece of calico and four pounds of sugar. He complied with their demands, but the vengeful relatives thereafter adopted him as their banker. The mother and other relatives of the slain young man scarcely ever met the agent without embracing him and with endearing epithets begging for something more in remembrance of the good buffalo runner.

No gifted funeral orator can equal or convey the impression of the mournful tenderness, the exulting pride or the gloomy despair expressed by the untaught savage in this mere act of formality. An Indian, man or woman, will be laughing and dancing; in a moment the merry circle will be left, and the next moment the same person will lift up his voice in heart breaking accents, the plaintive notes will weep tears of mournful tenderness, again startling defiance and war will breathe with fierce energy the deeds of the silent dead; then as the sorrowful recollections, inspired by the fate of the fallen relative, the high pean sinks to such supplicating despair as suggests a lost spirit lamenting its dismal fate. And all this is a mere formality, for the next moment the weeper may be the merriest of the laughing throng.—Forest and Stream.

Literary Work Without Pay.

When Rider Haggard wrote "Mr. Meeson's Will," probably the queerest of all his queer stories, he let himself out with a vengeance upon the skinflint section of the noble guild of publishers. The Meesons of the trade may possibly be the exceptions, but whether that be so or not, there certainly are too many of them. A medical friend told me the other day about one of them in New York. The New York Meeson's publishes medical works on an extensive scale and issues two medical periodicals besides. The periodicals are made up mainly of professional papers, prepared by doctors from experience in their own practice. Not one of these papers, my friend said, is paid for. The house makes it a rule not to pay any of the contributors to its periodicals. It pays only the editors, and these as little as possible.

"But," I asked, "can it really get articles from doctors without paying for them—articles, I mean, that are worth printing?" Yes, he said, plenty of them; not of the best quality, perhaps, but interesting and often useful. Many doctors like to keep their views before the profession and before the public, too, and they do it in this way. They write the article in their spare moments and are satisfied with publication as compensation. Their names are printed, the articles attract some attention, and their purpose to keep themselves before the public is accomplished. The publishers make a good deal of money by these periodicals, especially in the advertising department, and nearly all is clear profit.—New York Cor. Detroit Free Press.

A Metamorphosis.

Spudsey (the tramp)—I'm blowed if I knowed yer, Mike! Been playin' der races?

Mike—No. Been playin' dat bath house while der dude's in der water.

Spudsey—Guess I'll go in an' gaffle yourn. Dey's better den mine.—Judge.

She Remembers That It Is Leap Year.

Young Man (in periodical store)—I want a Fireside Companion.

Clerk (archly)—How would I do?—Texas Siftings.

Then They Would Be Bean Poles.

There is a large colony of Poles in Connecticut. They ought to move to Massachusetts and raise beans.—Burlington Free Press.

Origin of Fish Stories.

There is usually an area of low veracity about a trout brook.—Brunswick (Me.) Telegraph.

IN DUTCH HOUSES.

The War of a Peasant Woman Against Dust.

INTERESTING LIFE AMONG THE DUTCH.

How Laundry Work is Done in Holland—Servants.

Had Lady Macbeth lived in Holland, that "damned spot" would have been out in five minutes. Nothing, not even it, could stand against a Dutch cleaning woman. She is irresistible. Look how she is armed. Glance at her weapons. Cloths and chamois, brooms and brushes, scrubbing brushes for the floors, hair brushes for the wainscots, feather brushes for the walls, tooth brushes for the corner, goose wings for the stoves, hens feathers for cleaning out the key holes, small sticks of wood for poking out any unhappy particle of dust which may have got into the cracks of the floor, white paste for the windows, red paste for the hearth stones, emery for the steel, and several other pastes and polishes as the occasion may require. These are the implements a Dutch peasant woman uses to clean out her cottage home. Dust is her natural enemy, she is born into the world to fight it, it is her mission, and she does no more than her mother and foremothers have done before her. No wonder that such a home training turns out an exceedingly high class of domestic servant; and yet, the Dutch mistress grumbles. Such is life.

A DUTCH INTERIOR.

A "Dutch interior," from a housekeeper's as well as an artistic point of view, is a most interesting study. It is one thing to know a country well by traveling through it, stopping at the best hotels, visiting all points of interest, taking careful notes by pen and brush of all worth recording, but it is quite another experience and fully as interesting to live among its people as one of themselves to see how they live and think, manage and eat; when they are conscious no looker on is by, and that they need not adapt themselves to any stranger's custom or fancy. This latter has been my good luck to experience, and I can truthfully say that there are no cleaner, more hospitable, kind hearted, domestic people in the world than the Dutch. I mention "cleaner" first because with them it comes first. What would become of a Dutch woman in a world where there is no dust is a subject for conjecture, and though I look upon my visit to Holland as part of the happiest time in my life, still my sincere prayer is that my Dutch friends may never visit me. I could never live up to their idea of cleanliness; the mental strain would be too great.

Washing is not done weekly as in America, but allowed to accumulate for weeks, sometimes even longer, an unhealthy custom; but in this as in many other respects the Dutch can hardly be called a clean nation, from a hygienic point of view. With them it is dust, dust, and again dust.

Often the underservants such as scullery maid, nurse maid, etc., do not sleep in the house. This gives more space and room for the family. These girls come in by the day, sleeping at their own homes at night. All servants in Holland dress extremely neatly, generally in lilac print dresses, white muslin caps, and large white aprons.

The same dress is worn in the street as in the house. If the weather is cold, a shawl is thrown over the shoulders. They do a good deal of the household shopping. It must be indeed delightful for the Dutch mistress to have Betsey Jane all ready dressed to run her little errands, instead of having to wait an hour or more while Betsey Jane curls her "bang" and bedecks herself with cheap finery. This a good arrangement for maid as well as mistress, for with the former it breaks the monotony of the daily round, gives her a little blow of fresh air, besides the opportunity of a slight flirtation with the butcher's boy or the green grocer's assistant.

A HOUSEHOLD CUSTOM.

A strange household custom in Holland is the custody of the "guest money" by the mistress. Each guest is, as in England, expected to fee the house servants. In Holland, this money is at once handed by the recipient to the lady of the house, who at certain seasons of the year such as Christmas and Easter, divides it equally among all her staff. Not a bad plan when one thinks it over, but rather startling at first to the guest.

And now for Dutch food. All food is good in Holland, all cooking excellent, beef and mutton even better than in England, vegetables in abundance. Butter is very good and plentiful and is used without stint, but—everything is spoiled by being served cold. Rich dishes which would be most appetizing were they eaten piping hot, become repulsive, indigestible masses of grease when served from a cold dish on a stone cold plate. During the whole of my stay in Holland I never once saw a dish covered or a plate heated.

Cakes are a specialty with the Dutch. Each town has one or more of its own, and it was interesting to trace the ancestry of many of our American ones. Waffles met me at a kermes at The Hague. The koekje, which is to be found all over Holland and is, in fact, the Dutch word for "little cake," is actually and etymologically the ancestor of the New England cookie. Doughnuts I met everywhere, though I cannot imagine from where they got their ugly name of "doughnut." In Holland they are called spritsen, and in French Canada, where they are a sort of national cake, they are known by the name of croquignoles, and sometimes beignet, which latter name is simply the French for fritter. I imagine that in one way and another we owe a good deal of our cooking to Holland.—J. E. Brooks in Good Housekeeping.

The Zulus' Military Tactics.

The Zulus are a war like race, and their recent record in the war with England showed them to have an instinctive knowledge of military tactics best suited to their arms and themselves. For ages they have held their own against the other tribes, and rose to their higher point of power under the rule of the terrible Tchaka.

In the native fights each man throws his assagais at his enemy, catching his opponent's on his shield, if possible, then throwing them back again. Tchaka had his soldiers' assagais cut nearly through at the base of the shaft, so that although still strong enough to kill a man, they would break if caught upon the shield or ground, or upon the man falling with one in his body; this expedient placed all the sound assagais in the hands of his own men, who then rushed upon their foes stabbing them without mercy.

A curious fact is that over 2,900 years before Marius, the Roman, in his war with Cimbri, did very nearly the same thing. Their javelin, called pilum, had the rivet farthest from the point removed and a wooden peg inserted just strong enough to carry it in its flight. Tchaka also invented the short or stabbing assagai, and introduced the trick of receiving the enemies' second fire, which exhausted their assagais, and then charging home with their deadly short one. He ruthlessly killed every man who was wounded in the back, or who failed to regain his spear and shield after the battle.—Wilf. P Pond in Drake's Magazine.

Beyond His Wits.

Man is awfully smart in some things, but nobody has yet discovered one that could jam a hat pin clear through his head and make it come out on the other side, as the women do.—Chicago Herald.

A Business View of It.

"Are you engaged to Miss Eclat?"

"No, not exactly. But when I asked for her hand she gave me the refusal of it."—Detroit Free Press.

Chappie—It's very disagreeable when a fellah goes into society to meet one's trades-people. Cynicus—Why, they don't dun you before the company, do they?

RELIABLE AND ALWAYS THE SAME.

BRANDRETH'S PILLS are the oldest, safest and best blood purifier and purgative known. They are purely vegetable, therefore harmless. They are always the same and always produce the same effect. Other purgatives require increased doses and finally cease acting altogether. A course of one or two of BRANDRETH'S PILLS taken each night is a positive cure for constipation, headache and all bilious disorders. If you can't take them plain, get them sugar coated.

The people who don't like us don't know us. Those who don't like our neighbors know them too well.

SOMETHING FOR THE NEW YEAR.

The world renowned success of Hostetter's Stomach Bitters, and their continued popularity for over a third of a century as a stomachic, is scarcely more wonderful than the welcome that greets the annual appearance of Hostetter's Almanac. This valuable medical treatise is published by The Hostetter Company, Pittsburgh, Pa., under their own immediate supervision, employing 60 hands in that department. They are running about 11 months in the year on this work, and the issue of same for 1891 will be more than ten millions, printed in the English, German, French, Welsh, Norwegian, Swedish, Holland, Bohemian and Spanish languages. Refer to a copy of it for valuable and interesting reading concerning health, and numerous testimonials as to the efficacy of Hostetter's Stomach Bitters, amusement, varied information, astronomical calculations and chronological items, &c., which can be depended on for correctness. The Almanac for 1891 can be obtained free of cost, from druggists and general country dealers in all parts of the country.

"And what is love?" she drolly asked.
A maid whose wit could not be matched.
"It is an itching of the heart,"
She softly said, "that can't be scratched."

TRADES AND OCCUPATIONS.

THE YOUTH'S COMPANION for 1891 will give an instructive and helpful Series of Papers, each of which describes the character of some leading Trade for Boys or Occupation for Girls. They give information as to the Apprenticeship required to learn each, the Wages to be expected, the Qualities needed in order to excel, and the prospects of success. To New Subscribers who send $1.75 at once the paper will be sent *free to Jan. 1, 1891, and for a full year from that date.* Address, THE YOUTH'S COMPANION, Boston, Mass.

The survival of the fittest is so often the survival of a coward with long legs.

For Bronchial and Asthmatic Complaints, and Coughs and Colds, "*Brown's Bronchial Troches*" have remarkable curative properties. 25 cts. a box.

A bashful young man, like corn, turns white when he pops.

Dr. Price's Cream Baking Powder

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

SCOTT'S EMULSION

Of Pure Cod Liver Oil and HYPOPHOSPHITES of Lime and Soda

is endorsed and prescribed by leading physicians because both the *Cod Liver Oil* and *Hypophosphites* are the recognized agents in the cure of *Consumption*. It is as palatable as milk.

Scott's Emulsion *is a perfect Emulsion. It is a wonderful Flesh Producer. It is the Best Remedy* for CONSUMPTION, Scrofula, Bronchitis, Wasting Diseases, Chronic Coughs and Colds. Ask for Scott's Emulsion and take no other.

VASELINE.

FOR ONE DOLLAR sent us by mail, we will deliver, free of all charges, to any person in the United States, all the following articles carefully packed in a neat box:

One two-ounce bottle of Pure Vaseline	10 cts.
One two-ounce bottle Vaseline Pomade	15 "
One jar of Vaseline Cold Cream	15 "
One cake of Vaseline Camphor Ice	10 "
One cake of Vaseline Soap, unscented	10 "
One cake of Vaseline Soap, scented	25 "
One two-ounce bottle of White Vaseline	25 "
	—$1.10

Or for stamps any single article at the price named.

If you have occasion to use Vaseline in any form be careful to accept only genuine goods put up by us in original packages. A great many druggists are trying to persuade buyers to take VASELINE put up by them. Never yield to such persuasion, as the article is an imitation without value, and will not give you the result you expect. A bottle of Blue Seal Vaseline is sold by all druggists at ten cents.

Chesebrough M'f'g. Co., 24 State St., New York.

FOR MEN ONLY!

VIGOR AND STRENGTH For LOST or FAILING MANHOOD; General and NERVOUS DEBILITY; Weakness of Body and Mind, Effects of Errors or Excesses in Older Young, Robust, Noble MANHOOD fully Restored. How to enlarge and Strengthen WEAK, UNDEVELOPED ORGANS & PARTS OF BODY. Absolutely unfailing HOME TREATMENT—Benefits in a day. Men testify from 50 States and Foreign Countries. Write them. BRACES, APPLIANCES FOR DEFORMITIES, TRUSSES; Best Facilities, Apparatus and Remedies for Successful Treatment of Every Form of Disease Requiring Medical or Surgical Treatment.
WRITE FOR CIRCULARS ON DEFORMITIES, AND DISEASES OF MEN AND WOMEN.
Only Reliable Medical Institute on the Coast Making a Specialty of
PRIVATE AND SPECIAL DISEASES.
Branches, Kansas City, Butte City, Seattle, and will visit all cities on Pacific Coast, quarterly, three days each.

PISO'S REMEDY FOR CATARRH.—Best. Easiest to use. Cheapest. Relief is immediate. A cure is certain. For Cold in the Head it has no equal.

CATARRH

It is an Ointment, of which a small particle is applied to the nostrils. Price 50c. Sold by druggists or sent by mail. Address: E. T. HAZELTINE, Warren, Pa.

SALZER'S NORTHERN GROWN SEEDS
ARE THE BEST FOR ALL SOILS AND CLIMES.
They will yield for you, OATS 155 bu., WHEAT 40 bu., BARLEY 60 bu., CORN 100 bu., POTATOES 600 bu. per a.
Send 8 cents for sample farm seeds and catalogue.
Send 6c. for pkg. "Acme Radish" and elegant catlg.
Our Catalog is the finest ever published in America.
On Trial—25 pkgs. Earliest Vegetable Seeds, post pd. $1.
15 pkgs. Elegant Flower Seeds, post paid, 50 cents.
Low Freight to Pacific Coast States.

"ACME" the new 17 day Radish

THE ANCIENT PUEBLOS.

Remarkable Discoveries in an Arizona Valley.

WORK OF THE HEMENWAY EXPEDITION.

Scientific Exploration of an Ancient American Race.

In a quiet and unpretentious but persistent manner there has been going on for some thing more than a year, in the desert land of Arizona, a work of exploration and scientific investigation that, by reason of the peculiar field entered upon, the originality of methods adopted in its prosecution, and the importance of the results that are being attained, is destined to rank among the foremost enterprises of its kind that the world has known.

The original investigations pursued by Mr. Frank A. Cushing among the Zuni Indians about seven years ago have now become matters of history, and their great value from an archæological point of view has long age been recognized by scientists in all parts of the world. Mr. Cushing settled among these Indians, became one of them by adoption, was initiated into their sacred rites, and gave years to a thorough study from the inside of the history of these people as shown in the traditions that had been handed down from generation to generation, and in the forms and ceremonies of their mysterious ritualistic societies.

His work attracted the attention of Mrs. Hemenway, who had long been interested in the Indian people, and she recognized the importance of having, for the first time in this country, a special cultus studied and an ancient civilization rehabilitated and brought within the scope of modern investigation.

Happily endowed with wealth, she came to the assistance of Mr. Cushing, and with cordial sympathy and enthusiasm organized the expedition that has been so effectively and so modestly working.

For over a year, then, this expedition has been hard at work excavating and collecting, and the fruit of this long period of labor is now on its way eastward. It comprises several thousand specimens of pottery, domestic utensils, shell work, ornaments, stone implements, skeletons, etc. A few of the skeletons will be deposited in the Army Medical museum at Washington, but the collection practically in its entirety will come to Salem. What final disposition will be made of it is not yet determined. Professor Edward S. Morse, of Salem, has from the outset been deeply interested in this unique enterprise. He has just returned to his home after several weeks spent in the camp of the expedition, whither he went on a special tour to examine the field of work.

CAMP HEMENWAY.

The country which was selected for exploration and excavation does not offer many allurements in the way of comfortable living. The heat is intense, the dust is stifling, the water is warm and muddy, and the baneful fly is numerous. The expedition has camped about ten miles from the city of Tempe, A. T. In and about Tempe are abundant indications of a tropical climate in trees, varieties of cacti, and vegetation generally. The valley in which Camp Hemenway is situated is a broad, level expanse, smooth as a parlor floor, hard and dry and variegated, with bunches of sage brush, the mesquite, scraggy trees, and beautiful flowers. For twenty-five miles this flat surface stretches away, and a carriage could be driven anywhere over it. The soil is light and dry, and all about little whirlwinds of dust are seen moving along. The fauna and the flora are of semi-tropical character.

Camp Hemenway consists of several commodious tents pitched about a quadrangle. A few small trees try in vain to give shade; a flag waves from a tall staff, and at a distance a dozen mules are tied. Far away mountain ranges shut in the valley. The quadrangle is roped about, and on the smooth earth floor stone implements of various kinds are arranged in groups awaiting classification. In several large tents rude tables and shelves hold specimens of pottery. Excavations have been made far and near. About the camp and temples houses, graves and communal ovens have been uncovered, until the life of this ancient people stands revealed as plainly as though the record had been written down in words.

It appears that this valley in which the camp is, as well as other valleys throughout that section of the country, was centuries ago the home of a large population, which, from the general character of the dwellings which have been exhumed, has been estimated to have reached in this vicinity alone probably not short of 100,000 individuals. The houses of these people were built in groups of cities, only the merest traces of which now remain. The buildings, it is supposed, were overwhelmed by earthquakes, after which the disintegrating elements reduced them to dust, so that now nothing is left but low mounds, ill defined heaps of earth, and irregular lines of old canals.

Once this valley sustained a cluster of cities situated several miles from each other. Between the cities the work of agriculture was carried on, and traces of an elaborate system of irrigating canals have been found. These canals run in every direction, and they turned the dry desert into a flourishing and productive garden spot. One canal has been traced seventeen miles, another in a neighboring valley seventy-nine miles, and there are others of even greater length. In their construction these public works represented what must have been then an almost incredible amount of labor. They were built terraced, so that water would be retained in them all the year, and their surface walls were baked, until they were almost water proof by burning brush piled upon the puddled and plastered mud that formed their sides. The canals served a busy population, and certainly only a great population could have constructed them or indeed even had need of them.

DWELLINGS OF THE PEOPLE.

In the middle of each city a massive structure, with thick walls and six or seven stories in height, stood as a fortress. Around this were grouped the dwellings of the people, large blocks with flat roofs and terraced to the height of three or four stories. Sufficient has been discovered to enable the investigators to practically reconstruct the general appearance of these cities, and to clearly designate the character of their architecture and the methods of life of the people, even to minor details. The men engaged in the chase and in agriculture, while the women attended to household duties, and made, decorated and baked the pottery, the traditional knowledge of which has even been handed down to the Zunis and to other Pueblos of today.

They were a hard working race, as is evidenced by the great mechanical and engineering undertakings in which they engaged, and they particularly showed a great deal of mechanical skill in the fashioning of implements of stone and bone and in the making of shell ornaments. They were in a large sense a co-operative people, as appears from the communal ovens that belonged to each block of buildings. A distinct clan occupied each building, and in large ovens were cooked enormous quantities of food for the common use, the general method of cooking resembling that of the New England clambake. The central edifices were the temples, where dwelt the hereditary priests, whose storerooms held the tithes of grain and other crops, while other rooms were set apart for sacred or public purposes. In times of war this building became the citadel of the place and might well have been impregnable.

LABELED AND CATALOGUED.

Every object is carefully labeled and catalogued, and in the catalogue every circumstance concerning its finding is noted. Photographs are made of the excavations and objects found. Plans are also made of the buildings whose ruins are excavated and elaborate maps are drawn. The objects found include pottery, stone implements, shells and shell ornaments, turquois and other stones, and human and animal remains. Only a few traces of textile fabrics remain, and occasionally pieces of wood and other vegetable remains are found, for the most part in a charred condition, which accounts for their preservation. Most of the pottery collection consists of food and drinking vessels, buried with the dead, whose skeletons are also found, or used as domestic utensils, or found buried in the pyral mounds. This pottery does not differ materially from the ceramics made at the present day in the southwest. Many of the designs in vogue among the Zunis of today are found to have been derived or to have been handed down from these ancient models. In their shapes and in their schemes of decoration they show a very considerable amount of artistic quality. The shapes are very graceful, free and easy in line, and the decoration, although simple in character, is distinguished by much vitality and force of expression and freedom of touch.

Perhaps, however, the peculiar creative genius of the people is shown more markedly in the stone axes and other tools and in the shell and other ornaments. It is believed that when these axes and other stone implements are exhibited they will be found to be superior in variety of form and in beauty of finish to anything heretofore discovered as the work of primeval man. More particularly, however, the articles of personal adornment display the artistic skill of the people. Sea shells were brought from a great distance—as far as from the Gulf of California or the shores of the Pacific, being carried in loads, packed on the backs of animals, and thus transported over the mountains. These shells were worked into bracelets, earrings, beads, and bells of various shapes. Much of the shell work appears to have been used as a base for inlaying.

POTTERY, IMPLEMENTS, SKELETONS.

Some of the specimens of pottery and ornaments, as shown in drawings and in actual examples brought home by Professor Morse, are of most interesting character. In jugs and jars bird forms are seen; one is like a bird without a head, the wings being roughly indicated on the sides, and on another a bird head springs from one side. The decoration is generally in conventional lines. The stone implements are principally choppers, adzes, mills for grinding corn, and other forms, the use of which is problematic. The shellwork is apt to be covered with beautiful designs, and with these appear clasps, curious little bird forms carved out of stone, and finger rings and bracelets made out of shell and inlaid with turquois and other precious stones. Many of these would be accepted as clever works of art today.

Nearly 200 skeletons have thus far been found. This is the more remarkable, and by scientists is considered a special reason for congratulation from the fact that ancient Pueblo skeletons have been heretofore extremely rare. Previous to the work of this expedition it is said that only three or four have ever been found. The exhuming of these skeletons has resulted in a very important discovery in the line of anthropology, the exact nature of which, however, has not yet been made public.—Boston Cor. New York Times.

Sights in Nizhni Novgorod.

The entire region, from the river to the bluff, is crowded with wholesale, retail and second hand shops, where one can buy anything and everything—from a paper of pins, a wooden comb or a string of dried mushrooms to a ship's anchor, a church bell or a steam engine. In a single shop of the lower bazar I saw exposed for sale a set of parlor chairs, two wicker work baby carriages, a rustic garden seat, two cross cut log saws, half a dozen battered samovars, a child's cradle, a steam engine, one half of a pair of elk horns, three old boilers, a collection of telescopes, an iron church cross four feet in height, six or eight watches, a dilapidated carriage top, feather dusters, opera glasses, log chains, watch charms, two blacksmith's anvils, measuring tapes, old boots, stove covers, a Caucasian dagger, turning lathes, sleigh bells, pulleys and blocks from a ship's rigging, fire engine nozzles, horse collars, an officer's sword, ax helves, carriage cushions, gilt bracelets, iron barrel hoops, trunks, accordions, three or four soup plates filled with old nails and screws, carving knives, vises, hinges, revolvers, old harnesses, half a dozen odd lengths of rusty stove pipe, a tin can of "mixed biscuits" from London and a six foot bath tub. This list of articles, which I made on the spot, did not comprise more than a third part of the dealer's heterogeneous stock in trade; but I had not time for a careful and exhaustive enumeration. In a certain way this shop was illustrative and typical of the whole lower bazar, since nothing, perhaps, in that quarter of the city is more striking than the heterogeneity of buildings, people and trades.—George Kennan in The Century.

Value of the Chinese Almanac.

Recently the Chinese residents at Lhassa, in Tibet, implored the emperor to cause arrangements to be made which would enable them to receive the copies of their almanac at the earliest possible date in each year. This anxiety would seem very curious, were it not the fact, as we are informed by a writer in The Chinese Recorder, that the almanac is the most important book to the Chinese. Its space is far too important to be occupied with the matter which fills western almanacs. It contains astronomical information which is useful, but its great mission is to give full and accurate information for selecting lucky places for performing all the acts, great and small, for their every day life. And as every act of life in China, however trivial, depends for its success on the time in which and the direction (i. e., the point of the compass toward which it is done) it is of the utmost importance to the Chinese that every one should have correct information available at all times to so order his life as to avoid bad luck and calamity and secure good luck and prosperity. Consequently, the almanac is, perhaps, the most universally circulated book in China.

Pedestrian (in a jam on Broadway to policeman)—Can't you get me out of this without loss of time?

Policeman (gaspingly)—Be jabbers, sor, ye'll be lucky if toime is the only thing ye lose here!—Epoch.

COFFEE AND COCOA.

The Customs and Products of Guatemala.

THE CARE OF A COFFEE PLANTATION.

Bad Indians and Their Ways—The Art of Lying.

The part of Guatemala we are now in is called the "Costa Cuca," and from San Sebastian to San Felipe, ten miles away and near the mountains, the road passes through a succession of coffee plantations. To one not familiar with it, it would appear to be a bright, fresh leaved tree of a rather rich and glossy green, but with its limbs covered with a parasitical green growth resembling small acorns, which illusion is dispelled when the regular rows of trees are seen and the careful cultivation of the ground noted. While great care must be taken of the coffee tree, it is not a circumstance to that required by the cacao plant, which much resembles it. Cacao, or in English cocoa, the source of chocolate, is more abundantly grown in Ecuador than in any other portion of this hemisphere, and the Guayaquil cocoa of commerce commands a price in Guatemala city of $18 per "carga," or sixty pounds, so it may be seen that it is a valuable crop. The cocoa of Guatemala is a much finer variety and sells at $35 per carga, right here in the country, but the amount raised is not sufficient for home consumption, and but little of it finds its way into the outside world.

The plant has so many natural enemies that many finqueros are deterred from attempting its cultivation. The tree is planted from the seeds, which are no sooner put in the ground than a large ant searches for them and ruins many; when the tree appears and is about three feet tall, deer, attracted by the richness of the leaf, risk their lives for a feed of it; when these dangers are past and the fruit appears, squirrels come to eat it in large numbers and any decent sized cacaotal must have two huntsmen to kill squirrels. Thus it may be seen that chocolate is a universal favorite. During this time the ground must be as well weeded and cleaned as a Chinaman's kitchen garden. And in addition to this each cocoa tree requires a madre or mother, which is a shade tree planted for its own particular use. With such great care necessary, it is not strange that many prefer coffee planting.

ANOTHER VIEW OF IT.

And it occurs to me, how few who sit sipping Maillard's or Mennier's chocolate ever give a thought or ever know of the immense labor of its production! On the other hand it has its advantages, for while a coffee tree is fairly on the down grade to worthlessness after bearing eight years, the cocoa tree is said to bear abundantly for seventy-five years, and even more. Some cacaotals near the frontier of San Salvador, are so old that the oldest Indians in the vicinity testify that they were flourishing plantations when they were children, and the trees bear as well today as ever. The coffee estates near San Felipe were nearly all planted at the same time, every available space was utilized, consequently they all failed at the same time, and San Felipe, from being a thriving, busy town, became but a place to live in, and I failed to see its attractions even in that respect. When the coffee trees failed many finqueros planted sugar cane. This requires, from planting to maturity, only nine months, but is not so profitable as coffee.

The cocoa fruit as it appears on the tree is a pear shaped green mass about nine inches long, and in circumference not so large as an average pineapple. The inside of this pulpy sheath is divided into cells, about twenty, each containing one cocoa berry. Children and women are employed to prepare it for market, and it is not a sight which would induce one to be anxious to drink the cocoa he has seen cleaned. Each berry is surrounded in its cell by a sweet, pasty brown and greasy substance which the Indians like, so each berry goes to an Indian's mouth, where the sweet coating is sucked off and chewed, but this in reality does not affect the berry, because under the brown paste there is a parchmentlike shell which is impervious to the Indian's saliva, and comes off only in the roasting, leaving the inside meat pure.

SOMETHING ABOUT BAD INDIANS.

A marked difference is apparent between the true Indian of the Indian town and the one who has had much contact with whites and ladinos. The former is always respectful and polite and he is a natural gentleman. He never approaches you to speak without removing his hat and bowing low, and he never retires without excusing himself until he may return. The latter is usually disrespectful and of an insolent disposition—eager to take every undue advantage of his master's leniency and has to be taught by the generous use of a club. The ordinary feelings of the human heart are unknown to him. You can govern him, and govern him well, by simply causing him to fear you.

The art of lying is unknown in the United States when compared with the state of perfection it has reached among some of these Indian tribes. You may tell an individual in your employ to do a certain thing, but you must accompany him to see that he does it, because if he does not feel like doing it he will come back and lie about it. Hit one of them with your fist or kick him out of your house, and he will complain to the nearest alcalde, and will have twenty witnesses to swear that they saw you beat the complainant over the head with a club until he lay insensible in his own blood, and this though they may have been miles away at the time.

Many of the Indians are weavers and pottery makers. The cloths they produce are very pretty bright colored fabrics, beautifully embroidered in cotton or silks as the wearer may desire. The shirt of their costume is made like a square bag, with a hole for the head and holes for the arms, and when the skirt is fastened around the waist with their pretty belts, the lower part of the skirt becomes a petticoat. Dress a prettily shaped and well washed Indian girl in this costume, give her a bright turban, and let her balance the earthen water jar gracefully on her head, and you have a picture not soon to be forgotten; and yet they seem to be unaware how picturesque they look.—Guatemala Cor. New York Times.

Plenty on Hand.

Wife—Why is it, John, that you rarely kiss me now? Before we were married you bothered me almost to death.

Husband—I know it, my dear, and I laid in stock enough to last.—The Epoch.

The virtues of cinchona were not known till 1633 or 1638, when it cured the wife of the Peruvian viceroy, Cinchona.

IT WAS A FOUNTAIN PEN.

He Tried to Explain How It Worked, but Failed Ignominiously.

He was a prominent lawyer of Topeka. Briefs with him were as thick as the sunflowers that fringe the low bottoms of the silent Kaw in August.

Always dressed in the most spotless of fashionably cut garments, he was the envy of struggling barristers and the cynosure of the ladies who promenaded the aristocratic avenues of Kansas' fair capital.

It was a terribly melting day in the scorching month of June, when, with a cool array of immaculate linen and suggestively airy, snow white duck, he entered the state library, where the ever faithful custodian of the precious volumes of legal lore was pouring over his desk busily engaged in answering a mass of correspondence ever accumulating the burden of his daily life of routine.

"Why don't you buy a fountain pen?" he asked, in an enthusiastic tone, as he pulled one of these little instruments out of his vest pocket. "You can't imagine what a vast amount of time one can save. I purchased one this morning, and if I could not procure another I would not take $1,000 for it.

"Why, don't you know that a man's arm travels, in dipping his pen in the ink alone, more than half a dozen miles in an ordinary day of hard writing? Just think what a waste of muscular energy! Let me show you how easily the thing works."

As he spoke he attempted to unscrew the little cap, upon which a jet of the deceitful fluid, as fine as the spray from a lady's rubber bulbed perfume bottle, spurted out and struck him fairly between the eyes and slowly trickled down his face.

"I guess that I have unscrewed the wrong end. Wait until I try the other." Then, without replacing the cap he had withdrawn, he slowly took off the other, which, permitting more air in, out the treacherous ink flew in a stream as thick as a lead pencil, completely covering his face, vest and permeating his hair, falling down on his trousers, until his whole suit resembled the map of a swamp.

With evident disgust depicted on every lineament, he slowly ejaculated: "Perhaps if I had been educated in a polytechnic school I would understand the mechanism of the darned thing better. Have you a lavatory here that I may try and repair damages?" Whereupon he went out, a discomfited man!—Kansas City Star.

Exposure of One's Weaknesses.

A special weakness of a man is exposed by his indiscriminately accusing others of the same defect. When a person, in criticising the character or disposition of others, applies with a certain blind persistency one or two common faults to them all, now perchance hitting the mark and now flying far wide of it, we may be sure that these very faults are possessed by the critic in a marked degree, though they are often in a measure concealed by the complications of his own character.

They seem to stand before his mind's eye as glasses of various colors, giving corresponding hues to whatever is viewed through them, as he who looks at the sky through a colored window will see it red, yellow, green or otherwise, as the case may be. One who desires to rid himself of faults will do well to scrutinize himself in this respect, and if he finds a tendency to harp on some particular weakness of human nature he may feel assured that there he can apply the pruning knife.—New York Ledger.

Bombay Oysters.

The very newest thing about town is the "Bombay oyster."

The "Bombay oyster" isn't an oyster at all, of course, but this is the name that has been bestowed on it.

It is a composition sufficiently simple and common to please the lean and larded purse alike. It is nothing more than an egg dropped unbroken into a tumbler, and deluged with vinegar, and sprinkled with pepper and salt.

It is consumed always before breakfast, and by a great many sporting men in the city.

One of its effects is to counteract the evil tendencies of over eating. Some stout men like a "Bombay oyster" in the morning, and eat nothing again until noon. For a bilious stomach it is the finest kind of a remedy.—Boston Globe.

Protector Against Nicotine.

An electrical engineer of Carphin Springs claims the invention of a mouthpiece for pipes that will prevent any connection of the nicotine deposited in smoking with the tongue. He makes "a hollow ball, with a short tubular or slotted stem attached to it, which is inserted into the usual orifice in the mouthpiece of the pipe, or cigar or cigarette holder, so that the smoke shall pass out through the tube or slotted stem and upper slotted part of the ball, and the tongue shall rub against the ball in the mouth of the orifice, and thus avoid or prevent the saliva of the mouth from going or working back in the mouthpiece."—New York Telegram.

The Height of Our Ancestors.

Although it is needless to tell readers that all speculations upon this matter are without foundation, it is curious to find in a work published in 1718 by a member of the French Academy of Sciences the following statements. According to this author, Adam was 123 feet 9 inches in height, while Eve's stature is asserted to have been 118 feet 9 inches and 9 lines. Noah, we are told, attained a height of only 27 feet; Abraham was barely 20 feet in stature, while Moses is alleged to have measured only 13 feet in height.—J. N. Hallock in Christian at Work.

He Was Innocent.

"I missed several of my chickens last night, Uncle Jasper. Do you know anything about them?"

"Cunnel, I believe de law do not require cullud gemmen to answer questions which mout discriminate themselves."—Puck.

FADS OF BATHERS.

Ways of Steaming That Beat the Turkish Bath.

AN ORDEAL WHICH IS AKIN TO TORTURE

It is Very Popular With the Progressive Fashionable.

The fads of progressive New York women will kill me yet. Last week I took a "pack," and I am nearly dead. Lost twenty pounds and the power of locomotion for twenty-four hours. My lips and eyelids turned electric blue and my complexion is a pale green with ecru mottling. I wanted some medicine—a big dose—with a diet of lettuce, prunes, Graham rolls and hot water to see if I could put down the rebellious biliousness of my skin and put on a silver gray gown. I went to see the bathing mistress in the Hoffman house, who used to steam and knead the Jersey Lily and who did several hundred dollars' worth of grooming for the beautiful Duchess of Marlborough. She told me that I "ought to get packed."

"Where to?" I asked.

"Good looks! You can come here for a night or I will go to your house and give you a pack that will make your hair curl."

I gave her my card and made arrangements to be ready for her two days later.

Her parting command was: "Take a five meal fast to rest your system, and you will be the color of a lily when I get through with you." She did not say what color or what kind of a lily at the time, but I have since learned that the model she had in mind was the tiger lily.

THE "PACK" DESCRIBED.

I took the fast, and the day she arrived I was as hollow as a pipe stem, and the weakness of the traditional cat was muscular vigor compared to the general goneness of my interior. A small mountain of comfortables and blankets was collected, my bed was stripped and covered first with a rubber and then a pongee sheet. Over this was laid a wet sheet wrung out of boiling water in which I was folded like a prehistoric mummy.

The sensation was a little smart at first, and I had a lurking fear that the original hue of whiteness was being scorched from my spinal column. Satisfied of my mistake I relapsed into a state of passivity and the mistress of the bath transferred the mountain of blankets from the floor to my bed. Then she put a cool, wet napkin on my head, and there I lay with the weight of Atlanta's on my already caved in anatomy and every pore in my body streaming like a country pump. I tried to think I was having fun, for it was a day off and it has always been my motto to make my own sunshine.

Do what I could with my thoughts I felt the blood pumping into my brain and making violent and forcible efforts to escape. The stately mistress of the flesh brush made me keep still, changing the cold cloths on my head, slipped morsels of crushed ice down my throat and encouraging me by frequent reiterations that I was doing well and would have a beautiful color. I stayed in the pack three hours and perspired until I thought there was nothing left of me but the last breath. Then I dropped off of something—I don't know just exactly what—and when I was about to get a glimpse of heavenly things with a lot of short waisted early empire girls and small dimpled boys in feather trimmings floating about in atmospheric nonchalance I was rudely shaken and told to open my mouth. That ended the pack.

THE SENSATIONS AFTERWARD.

I was dosed with French brandy, rubbed with alcohol, polished off with a pair of bath mitts that had the grain of radish graters and put to bed again between warm sheets.

The packer gave me a cup of bouillon, a chop, a roll and a glass of claret, and stayed with me until I finished the first morsel of food I had tasted in fifty hours. Bidding me keep quiet and stay in bed a day or two she relieved me of a $5 bill I had been saving for a crimson parasol and went off. When I looked in the glass I saw a reflection that beggared the horror portrayed by the impersonators of Violetta and Camille in their last scenes. I was a sort of ox heart red with a mottling of yellow fever and black plague patches done in the fashion that Limoges vases are under glazed. My eyes were on fire, the lining of my lids was white and green, my nostrils were pinched and my lips shriveled and were onion blue in tint.

Briefly, I was a horror. I looked like a resurrection. Mentally I was as idiotic as the ushers in the Bible wedding. But I had been "packed," and there is some satisfaction to a crack brain to know that she has one less fad in the gamut of fooldom to investigate. I have given up the ideal of a gray frock and buckled down to a diet of rare roast beef, boiled onions, rice pudding and vegetable soup, for until I recover some of my lost flesh I have no use for anything but a Spanish scarf and an ulster.

But will you believe me when I tell you that these packs are taken regularly by the fashionably progressive women of New York every day in the week? It's a fact.—New York World.

Lord Wolseley's Warning.

Lord Wolseley says there is a greater now menacing England than the possibility of a foreign invasion—the extravagance of the English women. He has noticed, he says, ever since he was a boy an increase in the tendency of English women to spend a much larger portion of the incomes of their husbands than they were entitled to on articles of attire.—Detroit Free Press.

Preventive of Sunstroke.

A well known character in this city wears three sheets of tissue paper in his hat as a preventive of sunstroke. They are colored blue, orange and green. These colors, the wearer claims, doprive the sun's rays of the heat. The blue represents the higher atmosphere, the orange the clouds and the green the earth.—Dayton (O.) Democrat.

Woman's Rights in Polynesia.

A paper which Daisy seems to have enjoyed listening to a good deal was on the marriage customs of New Britain, New Caledonia and the Polynesian isles. In the first place, the girls do not seem to have a very happy time in their maiden days, sometimes passing as many as four or five years of their existence in a wicker cage about seven or eight feet high and ten or twelve feet in circumference, where there is only room to sit or lie down in a crouching position. When, however, these girls are taken out of their cages great marriage feasts are provided for them, so that their only consolation during their incarceration must be the unsatisfactory one of the prospect of the good things to come.

On the Duke of York Island a most objectionable practice prevails. The bride is presented with numberless and costly gifts, which are given to her in public, and all of which she is in honor bound to return in private. Just fancy how exasperating, and how much more difficult for couples to furnish! A custom nearly as reprehensible as that of breaking a cocoanut over the happy pair and sprinkling them as much as possible with the milk. It is hardly pleasant for the bridal gown from Worth's, or the wedding coat from Poole's! As to widowers, it must be an expensive process out there for them to marry again, for the female relatives of the first wife are allowed to assemble, and to do as much damage to the husband's property as they can accomplish. A man may have as many wives as he likes, provided he can pay for them; but this would not seem a serious drawback to some people, as they are mostly paid for in shells.—London Figaro.

Robert Houdin's Curious Contrivances.

Houdin acquired a comfortable competence by the exercise of his art; and he built a handsome villa at Saint Gervais, near Blois. When he had retired from business, he amused himself by introducing various curious inventions into his place and the grounds attached to it. The garden gate was situated some 400 yards from the house. A visitor had only to raise a diminutive brass knocker, and let it fall upon the forehead of a fantastic face—making but a faint sound—when a large bell was set in motion in the villa. At the same time the gate swung open automatically, the plate bearing the name "Robert Houdin" disappeared, and another took its place, on which was engraved the word "Entrez." When the postman delivered the letters he had brought he was instructed to drop them through a slit in the gate into the receptacle provided for this purpose. The box, directly this was done, started of its own accord on its journey to the front door of the house by means of a miniature elevated railway.

Houdin invented, too, an ingenious contrivance by which, while lying in bed, he could feed his horse in a stable fifty yards from the villa, for, on touching a small button, there was put in motion an apparatus that caused the exact portion of oats required for the animal's meal to fall into the manger from the granary above. By another curious piece of mechanism a little bench that stood beside a ravine in a remote part of the grounds was so constructed that immediately any person sat down upon it the machine automatically traversed a narrow bridge that spanned the gorge, and, having deposited its occupant on the other side, the bench returned to its original position.—Chambers' Journal.

What Self Binders Have Done.

The self binder was first successfully attached to the reaper in 1876; from 1867 to 1873 inclusive our average crop of wheat, varying more with the season than with the planted area, had been 258,000,000 bushels. In 1877, when the self binder first began to be used, the crop mounted to nearly 364,000,000 bushels. Again, in 1878, it mounted up, and from that date to 1887 inclusive, in which period the use of the self binder had become general, the average crop, varying more with the season than with the planted area, was 440,000,000 bushels. Could the crops of the last ten years have been saved without the self binder? When we consider that the total number of self binding reapers now made and sold is more than 100,000 a year, requiring over 30,000 tons of twine to bind a single wheat crop, do we not find in the tying of that knot on the self binding harvester a main factor in the export of grain with the returning import of gold on which we resumed specie payment? By that single improvement the cost of wheat was reduced not less than 6 per cent., and in some places 10 per cent.—Forum.

Afraid of a White Cat.

As for himself, the old engineer says that he is not at all superstitious, but he knows men who are handling the throttle on the Bee Line who regard it as a bad omen to see a white cat cross the road in front of an engine in the night time. "You may think it is extremely foolish," said he, "but there is a man in charge of a passenger engine on this line that can never be induced to make time after having seen a white cat cross the track at night. Such a thing does not happen very often, but he claims that it never fails to be the forerunner of some bad luck, not necessarily to his train, but somewhere along the line. After seeing the white cat he always feels his way along, as it were, and gives as an excuse for his failure to work up to the schedule that his engine would not make steam rapidly enough. The other engineers are on to him, but they never joke him about it, as he is extremely sensitive."—Globe-Democrat.

A French Clothier's Advertisement.

The latest device for attracting the attention of possible purchasers which has been adopted by several Paris shopkeepers is an "immovable boy." Outside a clothier's, for instance, the "boy" stands without moving a muscle, and bears on his carcass the newest fashion in blouses or corduroys. Passers by are easily attracted by the remarkable figure, which they take to be an effigy in wax work or a tableau vivant. The boy has been well drilled and lives up to his work. He smiles not, neither does he wink, nor does he betray by the slightest sign, token or movement that he has anything in common with the ordinary palpitating and effervescing specimen of humanity, the "boulevard boy." The device draws, for spectators are usually lost in amazement at the impassive features of the breathing simulacrum of a dummy figure.—London Telegraph.

At the First Reception.

Mr. Quickrich—I say, Maria——!

Mrs. Quickrich—Don't interrupt me when I am receiving the guests.

Mr. Q.—But—I say—we hired that band by the hour, and it's mighty mean of them to play so slow.

(The orchestra were playing a nocturne.)—Pittsburg Bulletin.

FAMILY WATER SUPPLY.

A Fruitful Source of Sickness and Death.

POISON FROM PIPES AND RESERVOIRS.

The True Source of Typhoid Fever and Diphtheria.

Pure water is a life giving fluid, imparting health and vigor to all the tissues, while impure water is one of the most fruitful sources of sickness, suffering and death, shortening the average duration of human life by many years. A pure and abundant water supply is therefore an object of the first importance to every family in the city or country.

The sources of supply are numerous. Many families depend upon rain water stored in cisterns or other reservoirs. Under favorable conditions this is pure and wholesome. It is, however, liable to absorb dust, smoke and other impurities in its passage through the atmosphere, especially over smoky cities, and in case of the first shower after a drought. When falling on the wooden roofs of houses the first rain washes off the dust and weatherbeat of the shingles, and should be filtered before it enters the cistern. Better still, an automatic arrangement may be used which will collect the first rainfall in some shallow receptacle, and when this is filled, will turn the pure stream into the cistern. If then the cistern is divided into two equal parts by a partition of brick laid in cement, so arranged that the water which enters upon one side of the partition is made to filter through the wall of brick before being drawn off on the other side, the water may be relied upon as sufficiently clean and pure for ordinary uses.

VARIOUS MINERAL SUBSTANCES.

Most country people depend upon the ground water of springs and shallow wells for their supply. This is liable in its passage through the earth to absorb various mineral substances, the most common and troublesome of which are the salts of lime and magnesia, which constitute hard water. This requires the use of a largely increased amount of soap in washing, and is therefore much less economical than soft water. In Glasgow it is estimated that the introduction of soft water in place of hard has diminished the consumption of soap at least one-half. Hard water also produces in many persons derangement of digestion, chronic diarrhœa, gravel and other inorganic deposits. One way in which the hardness of water may be lessened is by boiling it. Another method, paradoxical as it may seem, consists in adding lime, usually in the form of lime water or milk of lime. Both these methods result in breaking up the chemical combinations and precipitating the mineral substances, which should then be removed by filtration.

In cities and large towns, the usual source of supply is the surface water of rivers and lakes. This is stored in artificial reservoirs, and distributed through pipes of lead or iron. Where lead pipes are used, either in bringing water from reservoirs or springs, or in pumping it from wells into houses, the lead is gradually dissolved, and a poisonous compound formed, which when drank for a sufficient length of time is liable to produce unpleasant and even dangerous results. According to Professor Mayr, water containing one part of lead in one million parts of water is sufficient to produce lead colic, wristdrop and other symptoms of acute lead poisoning, while a much less quantity may cause irritation of the digestive organs and loss of muscular control. These effects may be produced in one member of the family only, while all are using the water, and the others escape, owing to a less degree of susceptibility. The path of safety in this matter lies in avoiding the use of lead pipes as far as possible; and in never using water for drinking or cooking, which has stood in a lead pipe for any length of time, but always taking the precaution first to run off or pump off a sufficient quantity to completely empty the pipes.

DECAYING ORGANIC MATTER.

All surface waters are liable to contamination from decaying organic matter, such as dead leaves, bark and pieces of wood, fragments of rotten fruit and vegetables, dead worms, insects and other small animals, garbage and animal excrement. Not only this, but in all old and thickly settled countries—wherever civilization has massed large numbers of human beings—both surface water and ground water are liable to the still more serious contamination of foul drainage, such as the leachings of farm yards, cess pools, sink drains, privy vaults, old graveyards and the sewerage of cities.

Dr. I. A. Watson, in a New Hampshire board of health report, has given a vivid picture of the fouling of a rural well from these sources, as follows: "Clustered on a few square rods of land are the farm buildings, the dwellings, wood shed, wash house, horse stable, cow barn, sheep yard, corn house, swine house, hen house, compost heap, cess pool and privy. All those are arranged in a hollow square, and in their midst is the farmer's well, with its curb, sweep and bucket or its cover, pipe and pump. Around this center are concentrated all the activities of a New England farm. Birth, life and death; bloom, fruit and decay, of men and animals, of shrubs and trees, have transpired here for a century. All the waste has been dropped upon the surface, there to accumulate, decay and putrefy. The earth beneath has become surcharged with animal and vegetable waste. The whole establishment is resting upon and above a mass of the most dangerous filth, and this filth is being daily leached into the bottom of the well."

In water thus abounding in organic impurities are found vast multitudes of animalculæ, which, when taken into the human system, develop into such frightful parasites as tape worms, trinchinæ and hydatids. Still more to be dreaded are the myriad microscopic bacteria, or germs of disease, which breed and thrive in filth, and literally swarm in impure water. These are the source of such deadly pests as diphtheria, typhoid and malarial fevers and Asiatic cholera. The importance of some method of preventing these dire results can hardly be overestimated. Few persons have any adequate conception of the extent to which pollution in water exists. Even in wells, it is said by competent observers that the water in ninety-five out of every hundred is insanitary and unfit for use. In the water of cities the evils are even greater.—J. M. French, M. D., in Good Housekeeping.

Gilbert at a Rehearsal.

W. S. Gilbert, the librettist, is a tall man, with gray hair and close cut whiskers. He is a great stage manager. At a rehearsal of one of his operas he devotes his whole energies to having everything go off as he thinks it should. He never smiles, even when a whole chorus is laughing at the quaint conceits of his verses. Though extremely dignified, he does not hesitate to go through the drollest contortions of body or the most free and easy dance step to illustrate his ideas to those who are to interpret them.—New York World.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY, JANUARY 16 1891

County Official Paper.

Mark Twain is very funny. He can get fun out of circumstances that would fill the hearts of common mortals with grief. It was a very cold day recently when his mother was buried, so Mark stayed at home and listened to the funeral sermon through a telephone. This is characteristic of the sham humorist and selfish humbug who never wrote a line of genuine wit or humor.

Where one rich man wants some kind of a force bill enacted a thousand poor men want free coinage for silver. But free coinage would diminish the profits of rich men, and one of these has more influence in Congress than ten thousand poor men; hence time is wasted talking about force bills to prevent action being taken for free coinage.

Sartoris, the husband of Nellie Grant, is reported to be dying of delirium tremens. The sooner the world is rid of the drunken brute the better. The gentle, loving Nellie let her imagination endow the fellow with manly character and virtues he never had. He was utterly unworthy of one so good; but woman-like, she will doubtless shed tears when he dies, though many bitter drops he made fall from her eyes during the years of her married life

Senator Hearst is reported to be dying of cancer in the stomach. In the event of his death while the Legislature is in session a successor would be elected. The State has many men well worthy of that high honor, but among them all no abler or more energetic Senator could be found than Hon. Charles N. Felton of San Mateo. Mr. Felton has served in the State Legislature and in Congress. He is an able man anywhere and would be a power in the Senate.

If Inyo county shall be united with Kern in an Assembly District we will be wiped out so far as any influence in State affairs is concerned. Inyo is as confirmed in adherence to the Republican party as Kern is to Democracy; but the latter so far outnumbers us in population that in election contests our vote would amount to nothing. It would be best if a district could be formed of counties east of the Sierras, but if there is not population enough in Alpine, Mono and Inyo there is no help for us and we must submit.

A suggestion is made to relieve from taxation for a term of years capital invested in manufactures in the State. If this be good policy the exemption ought to be extended to capital invested in irrigation works and improvements on desert land. These enterprises are of as much value to the State as manufactures; and as a rule it takes several years for the investors to realize any profits from their capital. Such relief would be of especial benefit to poor settlers.

Stanley is accused of gross injustice to his subordinates and to Emin. It is alleged against him that he has tried to belittle and crush every man who might have any share in the glory he thinks should be all his own. The really great men of the world never tried in any way to belittle or in any way injure any of their cotemporaries. Really great men think of duty before glory. Washington, Lincoln and Grant with the single purpose of doing every duty that came in their way, was each in his day the greatest man of his time. The first element of greatness is goodness; as the sun lifts the heavy waters into the air and clothes them with gorgeous beauty, so do truly great men lift their less gifted fellow men to a share of their own glory.

It is proposed in Congress to aid the Nicaragua canal. The scheme is to indorse the bonds of the canal Company to the amount of $100,000,000. This is a very large sum, but even if the United States had in the end to pay every dollar of it, the canal would be worth the money. But the United States will not have to pay the bonds, the business of the canal when completed will be immense, and there will be ample revenue to pay interest on the bonds and leave a surplus to apply on payment of the principal. The canal will be easily controlled by the United States in the event of war with any other nation. While the completion of this great highway will be of benefit to the whole United States and even to the commerce of the world, the most immediate as well as the most enduring benefit will be to California.

In California we say that Eastern people do not understand the Chinese question and that the opposition to Chinese exclusion arises from ignorance and silly sentimentalism. All over the West it is urged that in the East the grossest errors prevail as to the real character of the Indians and the proper way to deal with them. Perhaps in all of the Northern States people are just as much mistaken as to the real merits of the negro question in the South.

There has been a heavy falling off in the receipts of the State Treasury of Nevada for the year 1890. The "Lyon County Times" says this was caused by a season of severe drought followed by the severest winter ever experienced in the State. The total taxable property in the State is given at $24,663,384. This shows a falling off from the year 1889 of $1,966,269. Second rate counties in California have more taxable property than the State of Nevada.

Most of the prominent Generals of our great war have died aged less than sixty-four years. A Chicago newspaper finds great consolation in this fact. Old soldiers who are now aged fifty years must have enlisted very young, and the hardships and anxieties of war must have so impaired their constitutions that they cannot live many years longer, so there will be no pensions to pay. The science of Political Economy may yet require that as soon as a war is ended the rank and file of the army shall all be killed—put to eternal rest, would be a more humane phrase—so that those they fought for would not have to be taxed for pensions.

Columns of newspapers are filled daily with reports about State Legislatures. The most important items in these reports are about who shall be clerks, doorkeepers and other hangers on, and the prizes amount to but a very few hundred dollars for each one who secures one of these much coveted positions. Of vastly more importance than any, or all, State Legislatures, was the meeting of a few railroad magnates some days ago. These few men can at any time combine and make such laws as will compel paying tribute to them from every acre of land owned or cultivated within the United States. There is not a single industry nor productive interest of any kind but is, in some measure, subject to their will. There is no President or Governor to veto their enactments, nor can a Supreme Court declare their tariff laws unconstitutional. The most powerful Court in the United States, the actual Supreme Court, whose authority exceeds all other authority, is composed of the managers of the great corporate interests. It is hardly reasonable to expect that the men who have such vast authority will continue to use it with such moderation and justice as not to provoke a contest with the great bulk of the people. When this contest comes the corporate interests will be smashed.

A New Type of Gun.

William T. Chamberlain, of Norwich, has invented and perfected a gun which promises to be the most durable, simple and effectual gun ever made. It is called the electric hydrogen gun. There are three methods of firing the arm. By the first method Mr. Chamberlain claims the projectile is sent from the gun by a pressure equal to 37,000 atmospheres; by the second process by four times that force, and by the third method it is transformed into an air gun with a pressure of from 1,500 to 2,000 pounds. The gun is simple, without other machinery than the chamber and barrel. The demand for new and valuable weapons is so large that some of the great powers may find in this arm the executor they have been anticipating, while Mr. Chamberlain may find in it the fortune the shadow of which has kept his brain active and his hands busy for many a day.—Norwich (Conn.) Bulletin.

They Are Glad to Know Him Now.

A New Yorker of very limited means recently got a bequest, the news of which was printed in the papers. As soon as the fact became known he got heavy mails that brought him letters from all kinds of charitable societies in need of aid, and from a host of the sufferers by impecuniosity. He also found more callers at his house than there ever before had been knockers at his door, and he likewise enjoyed when in the streets the sight of many more smiling faces than he had previously been acquainted with. Never until this month had he realized the attractive power of the mighty $. He now finds that his deceased bachelor uncle, who left him a bequest, has endowed him with something else not set down in the last will, to wit, cynicism.—New York Sun.

The Parnellite business cost The London Times exactly £180,000. The shareholders of the paper were compelled to forego their dividends for the last year and for the first six months of this year in order to pay it. John Walter owns sixteen shares, and his loss was £48,000, the dividend on each share being £3,000. The circulation of the paper and its receipts for advertisements are constantly increasing.—Chicago Herald.

Sport in California is illustrated by the following from a local paper: "Ben Smith, a farmer of Coos Bay, saw a large buck in his field the other day, and he went after it. By the time Smith reached the brush he found a big panther eating the buck. Smith killed the panther and took the deer to his house."

TWILIGHT IN BORDERLAND.

The sky is aglow with the sunset light,
He has poured his gold over tower and tree,
And scattered his diamonds upon the sea,
Dropped his casket of pearls on the robe of Night,
And his tears on the floweret's pink and white,
Yet I leave them, mother, and fly to thee.

Over field and woodland and dark ravine
My spirit is borne on its pinions fleet,
Till I clasp your hand and our glad eyes meet;
Then we wander away in a glorious dream
And float, and float in a mystical sheen,
To a realm unknown to mortal feet.

We bask in that wonderful region of light,
We are filled and thrilled with love's sweetest tone,
While we drink of a bliss to sense unknown.
Oh, what do they know of pure delight,
Whose souls never stretched out their wings in flight,
Who never have found and embraced their own?

—Eliza Lamb Martyn.

THE BLACK CROSS.

A black cross had been set against Judge Hawkins' name. Why it is not for me to say. We were not accustomed to explain our motives or to give reasons for our deeds. The deeds were enough, and this black cross meant death, and when it had been shown us all that we needed to know further was at what hour we should meet for the contemplated raid.

A word from the captain settled that, and when the next Friday came a dozen men met at the place of rendezvous ready for the ride which should bring them to the judge's solitary mansion across the mountains.

I was among them and in as satisfactory a mood as I had ever been in my life, for the night was favorable and the men hearty and in first rate condition.

But after we had started and were threading a certain wood I began to have doubts. Feelings I had never before experienced assailed me with a force that first perplexed and then astounded me. I was afraid, and what rather heightened than diminished the unwonted sensation was the fact that I was not afraid of anything tangible, either in the present or future, but of something unexplainable and peculiar, which if it lay in the skies certainly made them look dark indeed, and if it hid in the forest, caused its faintest murmur to seem like the utterance of a great dread, as awful as it was inexplicable.

I nevertheless proceeded, and should have done so if the great streaks of lightning which now and then shot zigzag through the sky had taken the shape of words and bade us all beware. I was not one to be daunted, and knew no other course than that of advance when once a stroke of justice had been planned and the direction for its fulfillment marked out. I went on, but I began to think, and that to me was an experience, for I had never been taught to reflect—only to fight and obey.

The house toward which we were riding was built on a hillside, and the first thing we saw on emerging from the forest was a light burning in one of its distant windows. This was a surprise, for the hour was late, and in that part of the country people were accustomed to retire early, even such busy men as the judge. He must have a visitor, and a visitor meant a possible complication of affairs; so a halt was called, and I was singled out to reconnoiter the premises and bring back word of what we had a right to expect.

I started off in a strange state of mind. The fear I had spoken of had left me, but a vague shadow remained, through which, as through a mist, I saw the light in that far away window beckoning me on to what I felt was in some way to make an end of my present life. As I drew nearer to it the feeling increased; then it, too, left me, and I found myself once more the daring avenger. This was when I came to the foot of the hill and discovered I had but a few steps more to take.

The house, which had now become plainly visible, was a solid one of stone, built, as I have said, on the hillside. It faced the road, as was shown by the large portico dimly to be discerned in that direction, but its rooms were mainly on the side, and it was from one of these that the light shone. As I came yet nearer I perceived that these rooms were guarded by a piazza, which, communicating with the portico in front, afforded an open road to that window and a clear sight of what lay behind it.

I was instantly off my horse and upon the piazza, and before I had time to realize that my fears had returned to me with double force I had crept stealthily toward that uncurtained window and looked in.

What did I see? At first nothing but a calm, studious figure bending above a batch of closely written papers, upon which the light shone too brightly for me to perceive much of what lay behind them. But gradually an influence, of whose workings I was scarce conscious, drew my eyes away, and I began to discover on every side strange and beautiful objects which greatly interested me, until suddenly my eyes fell upon a vision of loveliness so enchanting that I forgot to look elsewhere and became for the moment nothing but sight and feeling.

It was a picture, or so I thought in the first instant of awe and delight. But presently I saw that it was a woman, living and full of the thoughts that had never been mine, and at the discovery a sudden trembling seized me, for I had never seen anything in heaven or earth like her beauty, while she saw nothing but the man who was bending over his papers.

There was a door or something dark behind her, and against it her tall, strong figure, clad in a close white gown, stood out with a distinctness that was not altogether earthly. But it was her face that held me and made of me from moment to moment a new man.

For in it I discerned what I had never believed in till now, devotion that had no limit and love which asked nothing in return. She seemed to be faltering on the threshold of that room, like one who would like to enter but does not dare, and in another moment, with a smile that pierced me through, she turned as if to go. Instantly I forgot everything but my despair, and leaned forward with an impetuosity that betrayed my presence. She glanced quickly toward the window, and seeing me turned pale, even while she rose in height till I felt myself shrink and grow small before her.

Thrusting out her hand she caught from the table before her what looked like a small dagger, and holding it up, advanced upon me with blazing eyes and parted lips, not seeing that the judge had risen to his feet, not seeing anything but my face glued against the pane, and staying with an expression that must have struck to the heart as surely as her look pierced mine. When she was almost upon me I turned and fled. Hell could not have frightened me, but heaven did; and for me that woman was heaven whether she smiled or frowned, gazed upon another with love or raised a dagger to strike me to the ground.

How soon I met my mates I cannot say. In a few minutes, doubtless, for they had stolen after me and had detected me running away from the window. I was forced to tell my tale, and I told it unhesitatingly, for I knew I could not save him—if I wanted to—and I knew I should save her or die in the attempt.

"He is alone there with a girl," I announced. "Whether she is his wife or not I cannot say, but there is no cross against her name, and I ask that she be spared not only from sharing his fate, but from the sight of his death, for she loves him."

This from me! No wonder the captain stared, then laughed. But I did not laugh in return, and being the strongest man in the band and the surest with my rifle, he did not trifle long, but listened to my plans and in part consented to them, so that I retreated to my post at the gateway with something like confidence, while he, approaching the door, lifted the knocker and let it fall with a resounding clang that must have rung like a knell of death to the hearts within.

For the judge knew our errand; I saw it in his face when he rose to his feet, and he had no hope, for we had never failed in our attempts, and the house, though strongly built, was easily assailable.

* * * * * *

While the captain knocked three men had scaled the portico and were ready to enter the open windows if the judge refused to parley or offered any resistance to what was known as the captain's will.

"Death to the judge!" was the cry, and it was echoed not only at the door but around the house, where the rest of the men had drawn a cordon ready to waylay any one who sought to escape. Death to the judge! And the judge was loved by that woman and would be mourned by her till— But a voice is speaking, a voice from out that great house, and it asks what is wanted and what the meaning is of these threats of death.

And the captain answers short and sharp:

"The Ku-Klux commands, but never explains. What it commands now is for Judge Hawkins to come forth. If he shrinks or delays his house will be entered and burned, but if he will come out and meet like a man what awaits him his house shall go free and his family remain unmolested."

"And what is it that awaits him?" pursued the voice.

"Four bullets from four unerring rifles," returned the captain.

"It is well; he will come forth," cried the voice, and then in a huskier tone: "Let me kiss the woman I love. I will not keep you long."

And the captain answered nothing, only counted out clearly and steadily, "One—two—three," up to a hundred; then he paused, turned and lifted his hand; when instantly our four rifles rose, and at the same moment the door, with a faint grating sound I shall never forget, slowly opened and the firm, unshrinking figure of the judge appeared.

We did not delay. One simultaneous burst of fire, one loud quick crack, and his figure fell before our eyes. A round, a cry from within, then all was still, and the captain, mounting his horse, gave one quick whistle and galloped away. We followed him, but I was the last to mount, and did not follow long, for at the flash of those guns I had seen a smile across our victim's lip, and my heart was on fire, and I could not rest till I had found my way back to that open doorway and the figure lying within it.

There it was, and behind it a house empty as my heart has been since that day. A man's dress covering a woman's form—and over the motionless, perfect features that same smile which I had seen in the room beyond and again in the quick glare of the rifles.

I had harbored no evil thought concerning her, but when I beheld that smile now sealed and fixed upon her lips I found the soul I had never known that I possessed until that day.—Anna Katherine Green in Philadelphia Times.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, Cal.

NOTICE IS HEREBY GIVEN THAT AT A meeting of the Board of Directors, held the 16th day of December, 1890, an assessment (No. 11) of Ten Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, No. 132 California street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 30th day of January 1891 will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on FRIDAY, the 20th day of February 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale. By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 135 California St., San Francisco, California.

HENRY M. STANLEY

IN DARKEST AFRICA

The complete story of Stanley's recent thrilling adventures and the disclosure of his important discoveries will appear for the first time in the work written by himself, entitled "In Darkest Africa." Do not be deceived by any of the so-called "Stanley books" now being offered as "genuine" and "authentic." To no one of these has Stanley contributed a line.

There is a no question about this statement being correct in every particular. We guarantee it, and will give particulars on application.

CAUTION In order not to be misled, see that the book bears the imprint of

COURT NOTES.

Geo. M. Gill, Superior Judge.

WEDNESDAY, January 14th.

A. A. Diaz et als. vs. N. Rhine—Complaint filed. Summons issued.

DIED.

MULLANE—At Big Pine, January 11, John Mullane, aged about 48 years.

Mr. J. Tracey was down from Big Pine last Monday.

Mr. John Baxter has been very sick for the past two weeks, but he is now much better.

Hon. Trenmore Coffin of Carson is very ill. At last reports his death was expected at any time.

The quartz mill at Belleville has been shut down. It has been running steadily for a long time.

Ohio was shaken by an earthquake last Friday; it was worse shaken on the 5th of November last.

Mr. J. R. Eldred came down from Big Pine yesterday to install the officers of the Odd Fellows Lodge.

Mr. John C. Eddy has been moved from Darwin to Lone Pine. He is under the care of Doctor Middleton.

Mr. J. E. Reynolds came in from Lookout on Sunday. He will return at the beginning of the week.

Mr. N. Rhine left town yesterday for San Francisco. It is his intention to remain for several months.

The Central Pacific road carries hay from Lovelock and Reno to San Francisco for three dollars per ton.

Surveyor McKnight has been occupied for some days past running branch canal lines under the Eastside canal.

Miles Goodman, an old timer on the Comstock, died at Virginia City last Saturday. He was aged about 71 years.

Arthur Noble came down from Candelaria last Monday. He says about three hundred men are employed and the camp is very lively.

It was a necessary form but only a form for the Legislature to re-elect Senator Stanford to succeed himself. The result was determined long ago.

Governor Waterman, just before his going out of office appointed Mr. A. R. Conklin Superior Judge of Kern County. The appointment will continue till the next election in 1892.

Up in Mono county they have some chilly weather. The *Chronicle Union* says that on Friday morning the thermometer marked 20 degrees below zero and the next day 16 degrees below zero.

Mr. John Mullane is reported to have died at Big Pine last Sunday. The deceased was afflicted with asthma and the malady was greatly increased by the trip to Bakersfield. He was aged about 48 years.

On Wednesday a messenger was sent from Lone Pine to Independence asking Doctor Woodin to go and see John C. Eddy who was reported to be in a critical condition. The Doctor started as soon as possible. Mr Eddy is reported to be improving since yesterday.

Mr. I. Merriam was at Independence a few days this week. He is a citizen of Iowa and being aged beyond the three score years and ten, feels the need of escaping from the rigorous winters of Iowa. Professor Dickson of the academy at Bishop is nephew to Mr. Merriam.

Another week of fine weather has passed away. It is very pleasant to have the winter go by so pleasantly, but there is very little snow on the mountains and the season is far advanced. So far everything indicates a dry year and a short supply of water.

The water main that supplies Modock froze up last week, and Mr. Fitzgerald had to suspend operations for a time. The interruption will be of short continuance. The pipe runs for a considerable distance over rocky ground and is not protected by any covering.

The Alta mine at Virginia City has been shut down, all the men have been discharged and it is said there is no intention of ever again resuming work upon the mine. It is reasonably certain that prospecting on an extensive scale on the Comstock will before long be abandoned, and no mining done beyond taking out the ore that is in sight.

Mr. L. C. Brooks, engineer in charge of the surveys for the proposed canal to Salt Wells Valley, has returned from San Francisco to Lone Pine, accompanied by his family. It is proposed to begin work immediately enlarging the Stevens canal and continue it southward as a part of the canal to Salt Wells. The parties connected with this work are very earnest in their assertions that it will go on and be pushed to a completion as rapidly as possible.

Plenty of Water.

Men who are very familiar with the Sierra Nevada mountains say there is enough snow stored in the canyons from last winter to supply an abundance of water for Owens Valley for two or three years to come, if there should be that many winters of light snow fall in succession. It is asserted very confidently that all the streams flowing into the Valley will be quite as high as last summer. For many years past Owens river and its tributaries have not been so high at this season as they are now and have been for months past.

Bogus "Indian Outrages."

The *Examiner* of last Sunday has a tale of cruelty and outrage perpetrated by Indians in Inyo county. A long article tells how the Piutes started from Walker Lake, went into Esmeralda county, Nevada, plundering as they went, and then "at sunrise the hostiles moved onward into California, where just over the boundary lay the Sylvania mine. The Superintendent of this mine is named Starrett, and for some time the Piutes have quarrelled with him over the question of certain blue checks that he offered them in payment for their services. These checks, it seems, have to come to San Francisco where they are cashed by Messrs. Turner & Sanborn, the mine agents in this city. Among the Shoshones were two individuals, Ross Edwards, a "squaw man," and Longstreet, a half-breed Apache. These elegant cut-throats had for some time taken decided exception to the method of business pursued by Mr. Starrett. They resented his not having silver dollars on tap whenever they called and resolved to teach him a lesson in finance. A committee was formed, led by Messrs. Edwards and Longstreet, to administer Indian justice to Superintendent Starrett. The committee stole up to his cabin, which lies within the California border, and abducted him. They cut rods and beat his naked body unmercifully, compelling him at last to go to his cabin and sign checks for an extravagant amount. Then borrowing all the whiskey he had they joined their comrades and held a ghost dance." So far as Indians are concerned this is all fiction. R. D. Elwards is a white man who worked at Sylvania. He claimed that $135 was due him, and compelled Mr. Starrett to make and sign a check for that amount. Mr. Starrett came to Independence, presented a complaint against Elwards, and a warrant was issued for his arrest. The constable made return that Elwards was out of the State. No Indians molested Mr. Starrett; he was not abducted nor beaten with rods or anything else by them.

Wished He Had Missed.

One of our vaqueros is very expert with a lasso and correspondingly proud of his skill. On a late occasion he was riding about two miles from home; he came suddenly upon a a wild cat, and the ready lasso was out and swinging in an instant. The loop was thrown with unerring skill and dropped over the head of the cat. The well trained horse, in his way as skillful as his rider, bounded forward, the rope fell, and the cat was caught. He stayed caught. The instant the rope tightened the cat made a spring for the horse, and caught on behind the rider. Then the fur began to fly. The vaquero leaned as far forward as he could. No need to put spurs to the horse—the cat was doing that. With a wild rush man, horse and cat dashed into the farm yard, the vaquero threw himself to the ground, and the men who had run into the yard on seeing the rush of the wild huntsman, killed the cat. That vaquero will never again lasso a wild cat.

A Bakersfield Tragedy.

Last Sunday morning a man and woman arrived at Swearingen's hotel, Bakersfield, and registered as Mr. and Mrs. Lewis, El Paso, Texas. They walked about the town during the day and after supper went to their room. Very soon after two pistol shots were heard in the room and when some persons entered there they found that the man and woman had both been shot in the head. The woman died immediately and the man lingered in life for some time, but his brains were oozing out and it was seen that his death was certain. No clue had been found to their identity at last reports.

Seeing Is Believing.

An exchange is asked by the Big Pine *Courier*. It is gladly granted. The *Courier* is issued by an enterprising merchant, Mr. A. K. Eagley, who will be glad to welcome all visitors to his publication office. If he should not show much in the way of a printing plant, he will show a large and well selected stock of goods among which every one will be sure to find something they need or that will interest them.

Installation.

Last evening the officers of the Odd Fellows Lodge at Independence were installed by District Deputy J. R. Eldred, as follows: Walter James Jr., N. G.; George H. Lewis, V. G.; J. D. Blair, Sec.; A. Stecker, Treas.; John Alexander, Conductor; J. E. Shepherd, R. S. N. G.; J. W. Murphy, L. G.

OFFICIAL.

DELINQUENT SALE NOTICE.

STEVENS DITCH COMPANY.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2,324, Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.

Dated Cerro Gordo, January 2, 1890.

ORDINANCE No. 32

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

SECTION 1. The regular meetings of the Board of Supervisors of Inyo County, State of California, must and shall be held at the Town of Independence, in the County and State aforesaid, being the County Seat of said County on the first Monday of February, May, August and November of each year, and must continue from time to time until all the business before the said Board is disposed of. Such other meetings must be held as are otherwise provided by law.

SECTION 2. This ordinance shall take effect and be in force on and after fifteen (15) days from its passage, and Ordinance No. 31 of said Board of Supervisors together with all ordinances or parts of ordinances in conflict herewith, are each and all of them hereby repealed.

SECTION 3. This ordinance shall be published in the INYO INDEPENDENT, a newspaper published in said Inyo County, at least two weeks, said publication to be made for said time and before the expiration of said fifteen days.

This ordinance was passed by the Board of Supervisors of said Inyo County, state aforesaid, at a regular meeting of said Board, held on January 5th, 1891, by the following vote: AYES—J. J. Stewart, Seth G. Sneden, R. Love and J. B. Steward.

Supervisor Eddy not being present.

(SEAL) Attest: JOHN N. YANDELL, Clerk of said Board of Supervisors.

By ALEXANDER CLARK Deputy Clerk.

J. J. STEWART,
Chairman.
SETH G. SNEDEN,
ROBERT LOVE,
J. B. STEWARD.

[ENDORSED.]

ORDINANCE NO. 32.

Filed and recorded January 5th, 1891, in Ordinance Book "B" on page 71 et seq.

JOHN N. YANDELL, Clerk.
by ALEXANDER CLARK, Deputy Clerk.

Proposals for Care of Indigent Sick of Inyo County.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until 10 o'clock A.M. on Wednesday, Feb 4 1891 to contract for the care of said indigent sick for the term of one year from May 10th 1891 to May 10th, 1892, said bids to designate the amount for which parties contracting will care for said indigent sick on the basis of an average of four patients per day throughout the year, and to include all medicine, nursing, board, lodging and washing. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care.

Said contractor to care for all the indigent sick properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for, said excess to be paid for by extra allowance on presentation of bills duly sworn to, at the regular meeting of said Board immediately after said contract has expired. The average four per day to be paid for at the regular meetings of the Board on presentation of bills duly verified. All payments to be made by warrants drawn upon the Hospital Fund of said county.

The person or persons to whom said contract shall be awarded shall give a good and sufficient bond in double the sum of the contract price, for the faithful performance of said contract.

The care and management of said indigent sick by such contractor shall be at all times subject to the inspection of said Board of Supervisors, or any member thereof, or any person appointed by the Board for such purpose.

Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of ten o'clock and twelve o'clock A. M., on the 4th day of Feb. 1891, and the Board reserves the right to reject any and all bids. JOHN N. YANDELL, Clerk.

THOMAS & HILL.

There are some patent medicines that are more marvellous than a dozen doctors' prescriptions, but they're not those that profess to cure *everything*.

Everybody, now and then, feels "run down," "played out." They've the will, but no power to generate vitality. They're not sick enough to call a doctor, but just too sick to be well. That's where the right kind of a patent medicine comes in, and does for a dollar what the doctor wouldn't do for less than five or ten.

We put in our claim for Dr. Pierce's Golden Medical Discovery.

We claim it to be an unequaled remedy to purify the blood and invigorate the liver. We claim it to be lasting in its effects, creating an appetite, purifying the blood, and preventing Bilious, Typhoid and Malarial fevers *if taken in time*. The time to take it is when you first feel the signs of *weariness* and *weakness*. The time to take it, on general principles, is NOW.

Women in the Case—He—That man yonder was once the wealthiest man in the Mormon Church. She—What broke him? He—Sudden change in the fashions.

A man who has practiced medicine for 40 years ought to know salt from sugar; read what he says:

TOLEDO, O., Jan. 10, 1887.

Messrs. F. J. Cheney & Co.—Gentlemen:—I have been in the general practice of medicine for most 40 years, and would say that in all my practice and experience have never seen a preparation that I could prescribe with as much confidence of success as I can Hall's Catarrh Cure, manufactured by you. Have prescribed it a great many times and its effect is wonderful, and would say in conclusion that I have yet to find a case of Catarrh that it would not cure, if they would take it according to directions.

Yours Truly,
L. L. GORSUCH, M. D.
Office, 215 Summit St.

We will give $100 for any case of Catarrh that can not be cured with Hall's Catarrh Cure. Taken internally.

F. J. CHENEY & CO., Props., Toledo, O.
Sold by Druggists, 75c.

He (who has just been accepted)—Do you believe in long engagements? Chicago Widow—No, I prefer short ones, and—(thoughtfully)—plenty of them.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

"Hooray!" screamed the young turkey, "Thanksgiving day is gone and I'm still here." "Shut up," said the old gobler; "you evidently never heard of Christmas."

Beware of imitations of the genuine Seal of North Carolina Plug Cut Tobacco.

THAT'S IT.

St. Jacobs Oil The Great Remedy CURES RHEUMATISM.

18 Hill Street, San Francisco, Cal., April 23, 1890.

"Having been sorely afflicted with rheumatism, my mother and daughter with sore throat, we have, by the use of St Jacobs Oil, been cured."

THE IMMORTAL DAYS.

Never a day is given
But it tones the after years;
And it carries up to heaven
Its sunshine or its tears;
While the to-morrows stand and wait,
Silent and veiled by the outer gate.
—Henry Barton.

ZATHOE.

It's a gay, spirited sort of a name, and suggests dancing black eyes, sun burnt cheeks, jetty curls, cherry lips and brown, unjeweled fingers.

Well, my old housekeeper's granddaughter, pretty Zathoe Lynn, possessed them all.

And she was 17 that summer, I 21. For two months and a single day I had been the envied possessor of "Hazelcroft." She had grown up with the other wild flowers on the place, herself the wildest flower of them all.

One remembered August morning she stole into the library with a glorious bunch of water lilies.

"They're for you, Mr. Rupert," she said, offering them slyly.

I patted the shapely brown hand extended.

"Thanks, little Zathoe. They are a pretty parting gift."

Her black eyes were fixed upon the carpet.

"You are going away, then?"

"Yes, to Europe."

"But you will come back?"

"Not for three long years, at least. I must see the world, Zathoe. And now, good-by! I shall not see you again before starting."

She looked up then, her eyes seeming two coals of living fire. I wondered why I had never noticed how beautiful they were.

"You'll be married and settled long before I return," I added, teasingly.

She gently laid the lilies down.

"Good-by, Mr. Rupert. I shall not forget you!"

And in another instant she had escaped from the room like a frightened bird.

My resolve to travel had been a sudden one, but by 11 o'clock I was ready to go. The day was perfect, so I decided to walk across the fields to Hazelcroft station. The distance was scarcely a mile. When just half way, and passing through a narrow lane, I suddenly heard a moan. Then came some unexpected, impassioned words.

"Oh, Mr. Rupert! My dear Mr. Rupert! I'll never see him again!"

I looked around, but there was no one in sight. Then I glanced over the low hedge. There, on the ground, with her head pillowed on a mossy stump, lay little Zathoe Lynn.

I was at her side in a moment, but so intense was her grief, she had not heard my approach.

Then I kneit down and spoke her name.

She sprang up in bewilderment, but I drew her to me.

"You are sorry that I am going, Zathoe?"

"Yes."

There was a world of sorrow in the outspoken word.

I took her tear stained face between my hands.

"Zathoe Lynn, look at me; it is true—can you care for me?"

She struggled from my grasp. "I hate myself! Oh, Mr. Rupert! I never meant that you should know!"

"But I am glad, very glad," I answered, kindly. "It is sweet to know that you will miss me when far away. I am, as you have heard, an orphan. All my life, until now, I have been unloved. I have never even had a sweetheart. You shall be my first and only one."

She crept back to my arms with the confidence of a child, and I smoothed her damp curls and kissed her red lips. How pretty and innocent she was!

"Zathoe," I whispered, "are you sure that you love me?"

She passionately flung her plump arms around my neck for answer. It was her first pure caress.

Then we sat down on a fallen log together, and I clasped her hot, brown fingers.

"How would you like to attend school during my absence?" I asked presently.

Her tear stained face brightened. "I love books, Mr. Rupert, and I would study hard."

"That is well. Now listen, Zathoe. Three years from this day, if you still love me, you shall be my wife. But the mistress of Hazelcroft must be cultured and refined. Promise that you will try to become all I could desire."

"I promise," she said simply.

"Remember," I added at parting, "you are still as free as the air you breathe. But you will think of me sometimes?"

"Always, Mr Rupert," she corrected.

"Then kiss me good by."

Her trembling lips just touched my cheek. I returned it threefold, and put her from me. Then I hurried away without once looking back. But my love for Zathoe Lynn began that day.

We did not meet again for four long years. But I often heard from my little protege. Her letters fill my desk today, a sweet record of the gradual unfolding of her heart and mind.

Old Mrs. Lynn died soon after my departure, and then, at my earnest request, Zathoe entered a neighboring seminary. Nobly did she keep her promise, graduating with honor at the completion of her three years' course. I would have returned to her then, but she would not permit it.

"Give me another year," she wrote. "I want to be perfect in your sight." And so I yielded.

But she sent me her portrait. Oh, what a face it was! Her dark, rich beauty had grown glorious.

The picture reached me while in London. I walked the streets all that night, for I was too restless to sleep. I wanted to go to her at once. But she said no.

During the last year of waiting I began to think that it was I who would prove the unworthy one. Zathoe would find me wanting. It was indeed a foreshadowing of the bitter truth.

But at length her last loving letter called me home.

I had begged that she would meet me at the Hazelcroft. So with Margaret Lynn, a widowed cousin, she went down and reopened the old house, which had once sheltered us both.

It was dark when I reached it. I half fancied she would be waiting for me at the gate. I forgot that she was no longer the passionate child I had left weeping by the hedge.

The low windows were all open, and I peered into the room. It had but one occupant, a tall, stately woman. She stood by the table, her gaze fixed upon a jar of water lilies.

It was Zathoe Lynn. I entered softly, and stood before her. I could frame but two words.

"My darling!"

She drew back, instinctively. But her lustrous eyes shone like stars.

"You are Rupert Hazelcroft."

I caught her white unjeweled hand. It lay cold and still in my grasp. I would have kissed her brow, her cheeks, her lips, but I dared not.

"Zathoe!" I cried passionately. "Have you no welcome for me?"

Her eyes were reading my face.

"You have changed," she said sadly. "I—was not—prepared for it. But I can say—welcome back to Hazelcroft."

Her courteous words lacked the true loving ring, but I went closer.

"Zathoe, do you remember our parting four years ago? You loved me then—today, I love you. We have both changed."

She trembled at my touch.

"You seem like a stranger!" she exclaimed bitterly.

Then, with something of her old impetuosity, she drew from her bosom a tiny locket. It was one I had sent her soon after leaving Hazelcroft, and it held my picture.

"Look," she continued, a great sob in her voice. "This is the face I have loved so long—that I shall love until I die. Rupert Hazelcroft, you have not brought it back to me!"

"That was an impossibility, Zathoe," I answered, gravely. "I was a boy then; today I am a man. And you're face is changed also, yet I love you the more for it. Zathoe, accept me as I am. But tell me—is my former self my only rival?"

"Yes," she breathed, rather than spoke.

"Then I will win you over again," I said, resolutely. "Zathoe Lynn, you shall yet be my wife. Until then you are free as you have ever been."

She laid her hand in mine, impulsively. It was burning hot. "Rupert Hazelcroft," she cried, "I will not accept the freedom you offer. Your generosity has made me all that I am today. I belong to you alone. I cannot love you now, but that, too, may come in time."

I took from its velvet case a costly diamond ring. "This was to have been the token of our betrothal," I said. "Zathoe, will you wear it for my sake? For the sake of the world hardened man, who would gladly be a boy again if he could."

She looked up tearfully as I placed it on her finger. "I shall wear it always in remembrance of this hour," she murmured.

For moments I restlessly paced the old familiar room. The ocean no longer rolled between, but time had parted us quite effectually. I glanced at Zathoe. How lovely and lovable she seemed. And she was mine—she had said it. The thought was reassuring.

"Sing to me," I begged at last.

Without a word she glided to the open piano, and soon a tender love song filled the room. Her whole soul was in it. She went on from one to another unconsciously. She seemed to have forgotten my presence. The glory of her voice kept me spell bound. When she had finished at last her head drooped upon her hands. I bent over her and reverently kissed her forehead.

She sprang to her feet.

"Forgive me. Music is my meat and drink. I love it next to heaven."

"Then I can only hope for a third place in your affections," I said pointedly.

She did not reply, and we passed out to the veranda, her hand just touching my arm.

The silvery moonlight was over every thing, and Zathoe glanced about her appreciatively. "Hazelcroft is a beautiful place," she said at last. "I have loved it from childhood."

"Then why not become its mistress to-morrow?" I asked eagerly.

But she shook her head. "To-morrow I am going away with Cousin Margaret. Her home is in Boston."

"I will follow you there," I continued boldly. "You shall not escape, Zathoe Lynn. I love you more than life itself! Promise that you will try to love me a little in return?"

"I have begun to try already," she answered, naively.

"Then, at our next meeting, I can hope for a different welcome?"

"Yes."

I drew her beautiful face to mine, and covered it with passionate kisses.

* * * * * * * *

We were married the following winter. For ten happy years Zathoe has been my cherished wife, and I have every reason to believe that she has long loved me, far better than she ever did the boyish face in the locket.—Norristown Herald.

Washing Among the Ainu.

Washing of person and clothing for the sake of cleanliness never seems to be considered of the slightest importance to them. In warm weather the younger people are tempted to cool off a bit by bathing and swimming in the rivers or salt water estuaries near the villages, but during all my experience (and this is fully confirmed by the statements of others who have had longer knowledge of them), I never once saw a man or a woman performing any thing like ablutions in an Ainu village. When brought under civilizing influences, they adapt themselves to their environment, and make very good servants.

An old custom of the people forbids an Ainu woman exposing her person in any way. Some go so far as to say that they must not be unclothed even in private. Consequently the girls whom I saw in bathing wore their cotton gowns cut in the shape of a shift, while the boys were without clothing of any kind, though some of them wore amulets (of Japanese origin) tied around their necks.

I was particularly struck by the shapeliness of the Ainu limbs and extremities. Some of the women had small hands and feet, attached to well turned wrists and ankles, whose symmetry and delicacy of shape dirt could not hide. The color of the skin seems to be darker than that of the Japanese, but just how much of this is due to exposure, and how much to their antipathy to water and utter ignorance of soap, it is impossible to even guess.—J. K. Goodrich in Popular Science Monthly.

Girls and Boys in Persia.

Boys and girls never play together. Even at home the inferiority of the girls is insisted on, just as much by the mother as by the father. The little girls have to invite playmates of their own, but their games are not lively ones. The little girls prefer to sit by themselves, under the shade of mulberry or pomegranate trees in the garden (which generally is laid out in the courtyard surrounded on all sides by houses or high walls), and listen to fairy tales which their mothers and nurses can tell very interestingly indeed. While thus there is not much companionship or love between brothers and sisters, there is no quarreling and no fighting either, between them and the boys, while thinking themselves above the girls, show them many little kindnesses.—Wolf von Schierbrand in Cosmopolitan.

A Dog's Sense of Guilt.

The raid which Larkins' dog made upon our camp was amusing rather than annoying. He was a very friendly and intelligent shepherd dog, probably a collie. Hardly had we sat down to our first lunch in camp before he called on us. But as he was disposed to be too friendly, and to claim too large a share of the lunch, we rather gave him the cold shoulder. He did not come again, but a few evenings afterward, as we sauntered over to the house on some trifling errand, the dog suddenly conceived a bright little project. He seemed to say to himself, on seeing us: "There come both of them now, just as I have been hoping they would; now while they are away I will run quickly over and know what they have got that a dog can eat."

My companion saw the dog get up on our arrival, and go quickly in the direction of our camp, and he said that something in the cur's manner suggested to him the object of his hurried departure. He called my attention to the fact and we hastened back. On cautiously nearing camp the dog was seen amidst the pails in the shallow water of the creek, investigating them. He had uncovered the butter and was about to taste it when we shouted, and he made quick steps for home, with a very "kill sheep" look. When we again met him at the house next day he could not look us in the face, but sneaked off, utterly crestfallen. This was a clear case of reasoning on the part of the dog, and afterward a clear case of the sense of guilt from wrong doing. The dog will probably be a man before any other animal is.—John Burroughs in The Century.

A VAST MILITARY CAMP.

Russia's Standing Army the Largest in Europe—The Reserves.

Russia is a vast military camp, and has been since the war with Turkey; 1,800,000 able bodied men compose the standing army, the largest in Europe, supported at a cost of nearly $300,000,000 a year, while the work in the wheat fields and the gardens is done by women and girls. I saw women carrying hods, digging sewers, ditches, and doing all sorts of manual labor, which in other countries is done only by the strongest men, and when I asked why it was so, was told that all the men were in the army. A few days after I took a trip to Krasnoe Selo, about forty miles from Petersburg, and saw 90,000 idle men in camp.

Until the late war with Turkey, it was the custom to recruit the army in the agricultural district, and in the cities, resorting to conscription only whenever the ranks needed to be filled; but the late czar reorganized the military establishment, and issued a ukase requiring every mail citizen of the empire to serve as a soldier for fifteen years, five years to be spent in actual service, and ten as a member of the militia or imperial reserves. At the age of 18 every young man, therefore must enter the service or furnish a substitute who can be obtained, usually, by the payment of a small bounty to some professional soldier who has served his own time. But whoever offers a substitute must serve in the militia reserves, and is liable to be called into the field at any time. The substitute is merely a hostage, and does not relieve his principal from service if the czar needs his arms. After five years of active service, the young men, well drilled and having a knowledge of military duty, are sent home to serve in the reserves till they are 33 years of age, being called upon each year to spend a few weeks in camp, so as to keep their hands in.—W. E. Curtis.

The Delights of Listening.

A listener and observer! How the import of this attitude comes out in the biographies of the literary men who have been most skillful in making their characters talk naturally, and who were themselves, on fit occasions, fine talkers! What prodigious powers of sitting silent, and simply absorbing, had such delineators of human life as Addison and Moliere. Their own personality was sunk out of sight, as they sat watching, and contemplatively taking in the ideas, humors, follies, virtues of those about them. The whole scene was a school of instruction. They did not want to air themselves, did not want to drive every other man's ideas out of his head and substitute their own. No wonder, then, that so often, at the end of an evening during which they had scarcely opened their mouths, they were pronounced the most agreeable and delightful of men. They were such.

The man or woman is always delightful who is a sympathetic listener. Exchange between mind and mind is not by word of mouth only. A nod, a smile, a spontaneous interjection goes farther than many a set speech. In fact, how can the man who is ever on the stretch to thrust in his own ear fail to destroy all capacity of passive reception in his nature. He inevitably ceases to feel others, ceases—to use an old word—to "sense" others, their ideas, humors, enthusiasms, and becomes not only an egotist and a nuisance, but—what, if he only knew it, would trouble him far more—a man of too blunt perceptions of external objects and personalities ever to make an effective, discriminative, sympathetic talker.—Boston Herald.

Judging a Man's Drinking Habits.

What mother for her daughter's sake, or what maiden for her own sake, would not be glad to know how to judge of a young man's drinking habits at a glance? A barber at the Astor house has developed a skill in phrenology. But this is not all. He has a plan for telling just what sort of liquid refreshment a man is partial to by the fashion in which he wears his hair and whiskers. If a man is clean shaven and his hair rather short in the back, this tonsorial expert declares he is either a very light whisky drinker or does not take any alcoholic stimulant. Those with side whiskers and mustache invariably prefer mixed drinks containing either brandy or whisky. A mustache alone is indicative of a whisky consumer, who takes absinthe in the morning. A man with a full beard, he says, is likely to drink beer, as a rule, and he with chin whiskers generally calls for ale and pepper in the cold weather. Bald headed men are apt to be more temperate than those with a heavy head of hair. He adds, also, that among the professions doctors are more temperate than lawyers, but he declined to venture an opinion as to clergyman or editors. One point, however, he was willing to stake his reputation upon—that the young men of to day consume quite as much "hard liquor" as their elders. Mothers and wives should stick a pin in all this wisdom.—New York Sun.

Tricks of Young Doctors.

"Some of the devices resorted to by young disciples of Æsculapius to give the public a high estimation of the volume and respectability of their practice, are very amusing to those persons who are aware of the real number of calls they have to make." This remark was made by a gentleman who is a close observer and has frequent reason to call at the offices of numerous physicians.

"Tell me some of them."

"Well there is one that is particularly noticeable, and when I tell it to you keep your eyes open and see if I am not correct. Most all physicians have a slate. One of the first things a young physician does is to get a slate. He persuades himself he cannot get along without one so he gets one, and generally a large one. Some of them grow discouraged at the paucity of messages, and fill their own slate, which generally hangs at the front door, with imaginary calls for the 'doctor' to please come in a hurry to see one of his imaginary patients. Others will not go thus far, but will allow every call placed on the slate to remain there until the slate is finally pretty well filled with genuine calls, but some of them very ancient.—Louisville Courier-Journal.

Tigers in Calcutta's "Zoo."

At the lower end of the esplanade is the zoological garden. It is well kept up and has the finest collection of tigers I ever saw. Two captive man eaters are noble specimens, as far surpassing the beasts of the menagerie as a big tomcat does a sick kitten. One, not long since captured, is said to have eaten 200 natives. He is as perfect in his glossy skin as is possible. I shook my stick at him; he sprang toward me with a roar which caused my heart to pulsate painfully for nearly an hour after. I had often felt desirous of participating in a tiger hunt, but this fierce animal has made me contented with what I may read of such things hereafter. Lord Dufferin told me yesterday that he would give me an open letter which might be useful to us in our tour through the country, provided I would not ask for elephants for a tiger hunt, which was the grand aim of globe trotters. I laughed, and told him of my scare, and that I would not hunt tigers if the elephants were twice as high.—Carter Harrison in Chicago Mail.

His Offense.

West Point Cadet (to young lady)—I am surprised to hear that Corp. Callow has been punished. Did you learn what his offense was, Miss Smith?

Young Lady—I believe, Lieut. Shoulderstrap, that it was conduct unbecoming either an officer or a gentleman, but I have forgotten which.—New York Sun.

How to Keep Cool.

"How cool and comfortable you look, dear," said a mother to her daughter. "Have you been taking a bath?"

"No, mamma," was the reply; "I have been reading a love scene from Howells."—New

DIAMOND PALACE.

We have been informed by Colonel A. Andrews, who has just returned from the East, that his Diamond Palace will be open every evening until further notice. We have examined his magnificent stock of diamonds, watches and jewelry, and must confess that we never saw its equal in any city.

It will certainly pay intending purchasers of goods in his line to go a few blocks out of their way and examine his choice stock before purchasing elsewhere, as they can save at least from 20 to 25 per cent. In the line of diamonds and watches, he has the largest stock of any house in the State, and his prices defy competition. Parties in the interior will do well to send their orders direct to Colonel Andrews, stating the article wanted and the price, and leave the selection to his good taste, judgment and honor, and they may be assured of being justly dealt with. If the goods do not suit, they can be exchanged, or the money refunded. Goods forwarded C. O. D.

The Diamond Palace is situated at 221 Montgomery Street, San Francisco, under the Russ House.

The Exception—She—I love poets. He—I'm delighted to hear that, for I am a poet. She—I didn't know that, but anyway, you will do to prove the rule.

CRAMPS OF THE MUSCLES CURED.

John I. Wood, of Stratford, Ont., was cured of cramps in the legs by wearing ALLCOCK'S POROUS PLASTERS. Mr. Wood says:

"Some three months ago I was taken very sick with severe pain in the small of my back over the kidneys. The pain was excruciating. I applied an ALLCOCK'S POROUS PLASTER over the affected region and had relief almost within an hour. At the same time, in conjunction with this trouble, I had very great nervous disturbance, affecting my legs with cramps so I could scarcely sleep. Meeting with such success with my back I applied a plaster under the knee on each leg, and in three days was completely cured, and have never been troubled in either way since."

The hold-over turkeys will be sold for Christmas dinners.

Washing powders are strong alkalies, and *ruin clothes*. The Purest soap obtainable is the best and cheapest. Dobbins' Electric Soap has been acknowledged for 24 years to be the *purest of all*. Try it right away.

Professor Koch's consumption cure may not accomplish all that is hoped for it, but it at least tends to make the bacilli feel lymph.

COUGHS AND HOARSENESS.—The irritation which induces Coughing is immediately relieved by "*Brown's Bronchial Troches*." Sold only in boxes.

"God help the Indian who fires the first shot," says General Miles.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles and Itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c. and $1.00 per box. WILLIAMS M'F'G CO., Prop's. Cleveland, O.

Try Germes for Breakfast

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

"But why do you want to marry her?" "Because I love her." "My dear fellow, that's an excuse, not a reason."

SOMETHING FOR THE NEW YEAR.

The world renowned success of Hostetter's Stomach Bitters, and their continued popularity for over a third of a century as a stomachic, is scarcely more wonderful than the welcome that greets the annual appearance of Hostetter's Almanac. This valuable medical treatise is published by The Hostetter Company, Pittsburgh, Pa., under their own immediate supervision, employing 60 hands in that department. They are running about 11 months in the year on this work, and the issue of same for 1891 will be more than ten millions, printed in the English, German, French, Welsh, Norwegian Swedish, Holland, Bohemian and Spanish languages. Refer to a copy of it for valuable and interesting reading concerning health, and numerous testimonials as to the efficacy of Hostetter's Stomach Bitters, amusement, varied information, astronomical calculations and chronological items, &c., which can be depended on for correctness. The Almanac for 1891 can be obtained free of cost, from druggists and general country dealers in all parts of the country.

"I vote aye with a big E!" exclaimed a rural member of the Ohio Assembly, as he promptly responded to the roll call.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

The Companion Calendar

For 1891.

This Beautiful and Unique Calendar and Announcement is called "THE BOOK OF DAYS." It has Fourteen Pages finely printed in Colors, the design being selected from nearly Two Thousand received in the Prize Competition. It is considered the most novel and attractive Calendar of the year. Mailed on receipt of ten cents.

Offer to New Subscribers.

This Calendar will be sent to each New Subscriber who WILL CUT OUT and send us this advertisement, with $1.75 for a year's subscription. The Youth's Companion will be mailed from the time that the subscription is received to January, 1891, FREE, and for a full year from that date.

No other weekly paper gives so large a variety of entertaining reading at so low a price.

Double Holiday Numbers—Illustrated Weekly Supplements.

POULTRY AND EGGS.
If you want big prices and prompt returns in Cash for them, send to Smith's Cash Store, 418 Front Street, S. F., Cal. Ask for the *Home Circle*; it contains directions for shipping, and a list of wholesale and retail prices of many thousand articles for family use. Do not send poultry to arrive later than Friday mornings. Some special bargains just now in Boots and Shoes of the best quality. Woolen and leather Mitts and Gloves for everybody, and many other articles which you will see quoted in the list. (Sample copy sent free.)

The Oldest Medicine in the World is probably
DR. ISAAC THOMPSON'S CELEBRATED EYE-WATER.
This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century. There are few diseases to which mankind are subject more distressing than sore eyes, and none, perhaps, for which more remedies have been tried without success. For all external inflammation of the eyes it is an infallible remedy. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits. For sale by all druggists. JOHN L. THOMPSON, SONS & CO., TROY, N. Y. Established 1797.

BIG G. Cures in 1 TO 5 DAYS. Guaranteed not to cause Stricture. Big G is the acknowledged leading remedy for all the unnatural discharges and private diseases of men. A certain cure for the debilitating weakness peculiar to women. I prescribe it and feel safe in recommending it to all sufferers. Sold by Druggists. PRICE $1.00.
Manufd by THE EVANS CHEMICAL CO. CINCINNATI, O. U. S. A. Trade Mark. A. J. STONER, M. D., DECATUR, ILL.

FOR MEN ONLY!
VIGOR AND STRENGTH For LOST or FAILING MANHOOD; General and NERVOUS DEBILITY; Weakness of Body and Mind. Effects of Errors or Excesses in Older or Young, Robust, Noble MANHOOD fully Restored. How to enlarge and Strengthen WEAK, UNDEVELOPED ORGANS & PARTS OF BODY. Absolutely unfailing HOME TREATMENT—Benefits in a day. Men testify from 50 States and Foreign Countries. Write them. Descriptive Book, explanation and proofs mailed (sealed) free. Address ERIE MEDICAL CO., BUFFALO, N. Y.

I CURE FITS!
When I say cure I do not mean merely to stop them for a time and then have them return again, I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

RIDING ON SNOW SHOES.

Sliding Down a Mountain Pursued by Wolves.

THRILLING ESCAPE OF A HUNTER.

Chased by Wild Beasts he Trusts Himself to the Mountain Side.

Perhaps not many people east of the Rocky mountains have ever traveled on snow shoes. The Norwegian snow shoes or skees, are the ones mostly used here. Going down a decline one goes at such a terrific rate of speed that one has to use a brake—that is, "ride the pole," which is generally a stick some eight feet long, which is held in front in the hands and then sat upon so it will plow in the snow, thus lessening the speed.

On the 17th of February I started from my cabin at the foot of Storm mountain to make a trip to the top to see if the fur bearing animals were still out. It is only about ten miles to the top, and I reckoned that I could easily make there and back in a day. Packing a slight lunch I tied it to my belt and started.

When I had reached the top and looked over I was surprised to find the sun just going down. Darkness falls very sudden in this country after sundown and I concluded to await the rising of the moon, which I knew would rise soon after dark, as it would be dangerous snowshoeing down the mountain side in the dark, for one could not keep the trail and would be liable to rush headlong against a tree or go plunging over a precipice.

Darkness fell as I have never seen it before. Everything was obliterated. I sat on my snow shoes at the head of the trail waiting for the light of the moon. The silence was oppressive. All around me I could see the dim outlines of the snow capped peaks, dark and somber, rearing their heads toward the sky. I must have fallen asleep, but I awoke with a start at the cry of a panther coming from a path of green timber a short distance to the left. This was followed by the cry of a timber wolf, which was answered by another and another, until the hills resounded with their weird howls. Soon gaunt shadows flitted from tree to tree all around me. Then the awful thought burst upon me that I was surrounded by wolves, which at this season of the year are very hungry and fierce.

If I could keep them at bay until the moon rose I was safe, as I could easily keep away from them. As one came close I did a very foolish thing. Pulling my revolver, I shot him through the body. With a fearful yell he started to run, the blood pouring from the wound in a stream. He was pounced upon in a second and torn to pieces by his companions. Crazed by a taste of blood the whole yelping pack charged upon me. It was growing light in the east where the moon would soon rise, but was still too dark to travel with safety; but I tarried not.

Hastily slipping my feet in the leathers of my snow shoes I started down the steep incline as if shot from a catapult. Down, down, down into the darkness I rushed at a headlong rate. A gaunt brute crouching near a tree sprang at my throat, but he had not calculated on my rate of speed and passed harmlessly through the air ten feet behind me. On came the pack, but their cries became fainter and fainter, and I soon began to ride my pole and slacken my rate of speed, as I was passing close to the brink of a precipice and soon had a turn to make, which one cannot easily do with snow shoes twelve feet long. I stopped at the turn to await the rising of the moon, which soon came up, making it as light as day.

I believed that the wolves had left to hunt some slower game, but that delusion soon suffered a rude shock. Soon the yelps commenced with redoubled fury as they scented me, and came closer and closer. I got on my shoes and waited, nothing loath to showing them again how easy it was to give them the slip. On they came, and as they got close I started out once more, but was horrified to find that at this place the decline was not great enough for the shoes to run themselves. I had forgotten until this time about this place. There was a bench about 500 yards long, and from there the trail veered to the right and for half a mile descended very nearly at an angle of 45 degs.; then the angle was not quite so much, but still very steep, down a trail as straight as a string to my cabin, seven miles below.

On came the howling pack, and knowing it was life or death to get to the steep decline before my pursuers I bent every energy to reach it. As I reached the turn I could hear their yelps right behind me, and could even hear their heavy breathing. While I was turning my shoes one big brute in advance of the rest reached me, and with a fearful snarl sprang at my head. I stooped, and as he went over me I straightened myself on my shoes and started down the steep hill. I plunged down with a speed that no steam could give. Trees flew like spectres; looking down the narrow path it seemed like a plunge to destruction.

My pole snapped like a pipe stem under the heavy strain, and I bounded forward with increased speed. The world swam before my eyes; trees reeled back from my course with a horrible nightmare weirdness. I don't exactly remember what the next sensation was, but I tried to peep out from under the brim of my hat, and it was all a blur—trees, rocks, landscape were all blended together in an undistinguishable mass. It seemed an age, but it was in fact but a very few moments until my speed began to decrease. The momentum was speeding me out onto the "mesa" (Indian for valley). I saw my cabin close by, but having no pole I could not stop, so I disengaged my feet from my snowshoes and rolled off into a drift, and let the shoes go on. I found them next day nearly a mile from there.—Steamboat Springs (Colo.) Cor. Inter Ocean.

RURAL REALITIES

As Guy Carleton Found Them too Near New York.

It is now the golden time when the thoughtful man says unto himself, lo, it is hotter than beeswax in town, and I will arise and flee as a bird to the mountains; I will lay me down, languid with a midsummer night's dream, by the bank of the laughing waters, under the trees beloved by the slow stirring wind; I will view the coming of the chariot of day through the gates of pearl garlanded with roses; I will listen to the choir of happy birds, the drone of the wandering bee, the pipe of the nestlings under the eaves, the fiddle of the locust and the deep throated

boom of the bullfrog in his seigy lair; I will watch the storm king build his towers and walls and battlements on high, hurling cloud against cloud and thunderbolt against thunderbolt till his wrath is appeased, and then to me shall be blown the sweetness and the coolness of wet fields, and through the long and languorous purple hour shall come twilight and the peace of him who liveth well; and under the solemn dome of dusk, under the young eyes of the stars, under the broad sheen of the rising moon shall I float down the river of rest to an infinite calm.

This is the city man's dream of a country heaven, but I have not found it.

I found the trees beloved by the slow stirring wind, but I found, too, that a large colony of painful ants had got there before me and was disposed to quarrel with intruders. I have watched the coming of the chariot of day through the gates of pearl, and I noticed the thermometer throw one leg over the eightieth rung, and then reach up and pull himself up to the ninetieth before the chariot had got fairly going. I have learned to love the drone of the wandering bee at immense distances, having discovered that that pampered insect considers it quite a joke to poniard a slumbering stranger without provocation.

I have seen an abundance of fresh vegetables in rural districts and miles of orchard bending under the wealth of pippin and cherry, but the frugal and far seeing farmer had mortgaged the entire lot, and the stranger had to content himself with a snuffle for yellow peas just picked from a Baltimore can.

These things have made me sad. It seems to me the honest granger should have nobler aspirations than to paint his house yellow, his barn blue and his well box green, insert a four line advertisement in the Sunday papers and steer unsuspecting citizens against his corned beef and malaria in the guise of health and economy. It seems to me somewhat unreasonable for a man to seek so far and fare so badly when he could just as well enjoy his flies and skimmed milk, his insomnia and profanity without leaving the city.

But the fact is every man bred in a city considers himself swindled unless he has two weeks of summer on a farm, just as the farmer thinks life not worth living without an annual tour through the joys of the Bowery in winter. It is an outbreak of inward cussedness, like the hives, and every man gets it. The whole pharmacopœia can furnish no remedy, and the only relief is to go and pursue the wayward fancy and come home full of sunburn, colic and repentance.

Go to the country, you toilers seeking for rest, but let it be country indeed, with no mingling of town. Seek your balm from sky and field, from sea and hill, from leaf and blossom and bird, and you will get it for the asking. Let the sun brown the cheek and hands of your daughters. Let your boys scurry through the tangle of woods, wild as the chipmunk they chase. Get as far as steam can carry you from the city and its worry, from the crowd and its tiresome agency; be a child of nature, a worshiper of laziness and sunshine—there is the sovereign healing you seek, and you will seek it in the gatherings of fashion in vain.—N. Y. World.

Very Sociable.

"The people of New York are not very sociable, are they?" said a western man, addressing an acquaintance who lived in the east.

"Well, I don't know but they are, although they may be a little peculiar in that respect. For several years I had my office in a very large building on Broadway. One day a fellow came in and asked if my name was J. W. McFiddleton. I told him it was, and then, after a few moments' silence, he said: 'My office is just across the hall, and ever since I saw your sign several years ago I have been intending to drop in and see you. I am your brother, you know, and—well, how are you getting along, anyway?' Yes," continued the eastern man, "they are a trifle peculiar, but after you get in with them you find them very sociable."—Arkansaw Traveler.

Goodby, Goosy.

"Little do you know how we bartenders are imposed upon. Woe is our lot. Today a six footer entered our saloon and called for brandy. He imbibed a large quaff.

"'Has Goosy been in?' he asked.

"'Who-o Goosy?' said I.

"'Goosy walks like this.'

"The six-footer drooped on his haunches, spread his legs apart like a painfully bandy-legged being and waddled towards the door. Suddenly straightening himself out, he howled at me 'Goodby, Goosy,' and fled a mile up the street before I found time to run from behind the bar."—Philadelphia News.

Dangers of Education.

Hotel Guest—I don't believe in this modern custom of tipping. I want you to understand that.

Waiter—I's been to school, sah, an' I happen to know there ain't nothin' modern about it, sah. The custom is as old as civilization, sah.

"Oh, come now."

"Fac', sah. I learned in history, sah, that one time a rich man like you named Caligula went somewhere to supper an' it cost him $400,000 before he got through, sah. By the way, sah, all the things you ordered is out, sah."—Omaha World.

In Need of a Prefix.

"Hello, old boy! Heard you're going to be married—and a fine girl, too, eh?"

"Well, yes, she has a very comely figure."

"Oh, but that's aside from the question. How about the incomely figure?"—Detroit Free Press.

Signs of Summer Flights.

First Beer Garden Waiter—Mrs. De Goode is off for the summer again.

Second Waiter—How do you know anything about that fine lady's movements?

"Mr. De Goode has just come in."—Omaha World.

GROWTH OF CREMATION.

Efforts Made to Render it Easy and Practical.

OVERCROWDED CEMETERIES OF PARIS.

Attempted Solution of an Unexpected Problem—Where it Rests.

Cremation in France is attended with difficulties. Technical questions have arisen and the laws regulating freedom of burial have caused unpleasant delays. Still, the crowded condition of the Paris cemeteries, where the dead are crammed into narrow mausolea and piled in an indiscriminate way on top of one another renders a solution of some kind imperative. When the cemeteries of Pere la Chaise and Montmartre were established they were on hillsides that were at some distance in the country. Now, though they are not in the heart of the city, they are far within the city limits and have a dense population on all sides of them. No city in the world feels more imperatively the need of regulating the important question of burials in a manner that, while it shall respect the prejudices in favor of the dead, shall at the same time sufficiently protect the interests of the living. The establishment of a new cemetery on a grander scale at Mery sur Oise, a few miles from Paris, has been in contemplation since 1879, and as the project approaches solution the question of cremation is again being earnestly discussed.

In 1879 and again 1880 cremation was by city ordinance made optional for the friends of the deceased, but the keeper of the seals found legal objections in the civil and penal code. Pending the settlement of the doubtful points involved a society to promote the cremation was formed, of which Gambetta was a profoundly convinced and exceedingly active member. A new law regulating freedom of burial was passed, and a crematory, or crematory chapel, was erected in the least used part of Pere la Chaise, which is a conspicuous object in the scenery if nothing else. The law has not accomplished all that its projectors desired, and various unexpected difficulties have arisen, which have strengthened the hands of the enemies of cremation.

At Milan, Lodi, Cremona and other cities in the north of Italy, at Zurich and in Germany, cremation is effected in two hours. This is of itself considered a sufficient objection in Paris, since the long waiting, even in a room set apart for the purpose, would be too painful for relatives and their friends. To make it practical in a populous city, where, if cremation became fashionable, time would be precious, the process should be accomplished in half an hour. It is this shortening of the time that the experts are studying at present. After having made a personal examination of the crematories at Zurich and Milan they concluded that the desired result could only be obtained by raising the temperatures, and that wood should be replaced by illuminating gas mingled with a current of air. Wood only gives a temperature ranging from 900 to 1,000 degs. centigrade, while gas gives from 1,800 to 2,000 degs.

Experiments have been made on the carcasses of sheep at one of the gas manufactories of Paris which, though they have not been entirely satisfactory, have shown that they were tending in the right direction. For instance, it was remarked that when the high temperatures effected incineration in the desired time, it rendered the pulverization of bones more difficult. A curious chemical process takes place. The bones, composed principally of carbonate of lime, acquire almost the hardness of porcelain when brought to a temperature of 1,800 to 2,000 degs. centigrade.

What was to be done in a case like this? The cremator could not evidently give to the weeping relatives a petrified skeleton maintaining approximately the original proportions of the defunct, and incapable of being put into any cinerary urn, instead of the handful of ashes which they wished to be put into a china vase on the parlor mantelpiece. So he set himself to solve this unexpected problem and discovered that if at a given moment, that is after the tissues were perfectly reduced to ashes, the remains were suddenly plunged into water, by a mechanical device easy of fabrication, the petrified bones would at once resolve themselves into fragments of the desired minuteness. The process can be taken with glass which, when heated to a high temperature and plunged suddenly into water, is reduced to a condition of impalpable powder.

This is where the question rests. The experiments have been made under the direction of the Paris municipal authorities, who expect in any arrangements for cremation they may hereafter effect to respect implicity religious prejudices. They desire that the time of the ceremonial shall be as brief as possible. The body brought to them for incineration will not be removed from the coffin, but reduced to dust with the wood, clothing, ornaments and jewels, all of which will be returned in a condition of fine powder. This will be done when, as expected, the crematory at Pere la Chaise is in working order. There are four "ovens," as they are technically called by the French, and, as the demands for cremation are numerous, it is expected that they will all be kept busy when physical and legal difficulties are removed, which it is hoped will be soon. It is not only the good French who will be cremated, but foreigners who may wish to give their burial ceremonial a sort of eclat. A Belgian some time ago sent money to pay for his cremation at Pere la Chaise. In due time he died, and the crematory not being in working order, he was buried at Brussels with the understanding that his remains will be taken to Paris for cremation as soon as everything is ready.

The efforts of the French to render cremation easy and practical naturally interest those Americans who have sought to introduce this method of burial. Where not a dozen persons are cremated in a year in a population of 60,000,000, the time occupied is of comparatively little consequence. But should cremation become fashionable art and science will have to be called on to render the process not only inoffensive to the finest sensibility, but even æsthetic.—San Francisco Chronicle.

Will you smile if I say that I believe the study of science will help make a child truthful? The habit of lying usually begins in an unchecked course of exaggeration—the result of an over vivid imagination. In science there is legitimate use for even the boldest imagination, but always, at every step, the most careful distinction between fact and fancy, and a niceness of discrimination in shades of meaning entirely unknown in the other fields of study.—Frances Fisher Wood.

The Musical Sense in Animals.

The higher animals can also enjoy themselves, as my house cat shows, when she comes at the playing of the piano to sit by the player, and sometimes jumps into her lap or on the key board of the instrument. I know of a dog, too, in a family in Berlin, which comes in in like manner when there is music, often from distant rooms, opening the door with his paw. I knew of another dog, usually thoroughly domestic, which occasionally played the vagabond for love of music. Whenever the semi-annual mass was celebrated in the city he could not be kept at the house. As soon as the so called Bergknappen, who were accustomed to play at this time in the streets, appeared he would run away and follow them from morning till evening.

Evidently neither cats nor dogs, nor other animals that listen to human music, were constituted for the appreciation of it, for it is not of the slightest use to them in the struggle for existence. Moreover, they and their organs of hearing were much older than man and his music. Their power of appreciating music is therefore an uncontemplated side faculty of a hearing apparatus which has become on other grounds what we find it to be. So it is, I believe, with man. He has not acquired his musical hearing as such, but has received a highly developed organ of hearing by a process of selection, because it was necessary to him in the selective process, and this organ of hearing happens also to be adapted to listening to music.—Popular Science Monthly.

A Cat Flirtation.

We see a cat come stealthily rubbing up against a chair leg, the head inclined coquettishly over one shoulder, regarding us with a furtively coaxing smile. With a flirt like that, whether maid or matron, there is no occasion for ceremony. You snatch her up and on your knee; she pretends to be offended and to struggle to escape. But she curls herself up with a sensuous purr when you begin tickling the fur that lies just behind the ear, and thenceforth it is all plain sailing. It is very different with a corpulent and sturdy Tom, who, though he may have luxuriated in comfortable quarters all his life, has, nevertheless, had his sad experiences, and seen something of the worst side of human nature.

Mischievous boys have heaved half bricks at him, ill bred and unsympathetic servants have resented his patrician manners, expelling him with ignominy from the lower regions, and sometimes punching his head. Even his master, who is the reverse of a passo maniac, may never have appreciated him according to his merits. No wonder that a cat of that stamp should be slightly misanthropic and suspicious. Naturally he mistrusts a stranger's advances, but, nevertheless, there is something in your voice which sends a quiver through his ears and makes him visibly relax the rigidity of his tail.—Saturday Review.

The Sense of Smell.

Smell is the most acute by far of the five human senses. Take an ounce of musk—most powerful of scents—and leave it where the atmosphere is still, open on a table, for a year. At the end of that time, having for full twelve months rendered odorous the whole air in its neighborhood, the most delicate scales cannot detect that it has lost a particle in weight. Yet the smell has been infinitely distributed, microscopic portions of the musk floating off and exciting impressions upon the nerve papillæ under the delicate lining of the nasal passages; for this is what smell means. The sense has grown almost rudimentary in human beings through want of necessity for its use under civilized conditions, but it is highly probable that the cave men had it quite as well developed as the sharpest nosed beasts.—New York Telegram.

The Price of His Handwriting.

One of the wittiest and most popular of American writers tells of his elation in the budding days of his authorship when he saw his name in a long list of "Autographs of distinguished men for sale" displayed in a shop window. Entering with an air of indifference, he asked, "How do you sell Blank's autographs?" naming himself.

"Two for three cents, sir," was the prompt reply.

"I left the shop," he says, "a sadder and wiser man. If they had said 'a cent apiece' I could have borne it. But 'two for three,' like a rotten banana! From that hour I adjured popular applause.'—Youth's Companion.

New York "Groceresses."

The groceresses of New York, to coin a feminine term, number 320. Nearly all are widows. Mrs. Catherine Egbert, of No. 647 Washington street, the wife of a skilled mechanic, preferring to be independent, conducts a retail grocery business by herself, and is proud and happy in the success she is making of it. More sweet things are done by this pretty, gray eyed, raven haired merchant than the world will ever know. Her ledger is black with bills that she has no expectation of collecting, but that does not harden her in the least, and no woman or child is ever denied the credit asked at her counter.—New York World.

Descendants of Great Men.

It is a singular fact that great men seldom leave direct descendants. Napoleon, Wellington, Washington, all prove this rule. Shakespeare left only two daughters, whose children died without issue. Probably the nearest relative to the great poet now living is one Thomas Hart, a resident of Australia, who is said to be the eighth in descent from Shakespeare's sister Joan. Walter Scott's line ended with the second or third generation.

A Negro's Monster Head.

Abner Dorsett, a negro living in Hickory Mountain Township, North Carolina, has the largest head of any person in the United States so far as heard from. It is thirty-two inches in diameter, and gives Abner a decided "top heavy" appearance.—St. Louis Republic.

HOME EDUCATION.

Play Should be a Part of the Household System.

DAMAGE DONE IN THE SCHOOL ROOM.

Hereafter Education Will Mean Culture of the Whole Body.

Children should not be compelled to take to the streets for sport. It should be a part of the household system to afford play, and to do it as surely and systematically as books and food. We have a good deal yet to learn about play. We should have our hours for sport and relaxation when the whole household join in games. As home education increases, and it must increase, these hours will be doubly necessary. I would not allow a child to study or read over an hour consecutively. Then let him play and exercise his body one hour. At what age should we cease to play? If fools, we may stop early in life. Only wise people never cease to love and enjoy games.

But the play room is not all. This is the age of manual culture. The grandest of innovations has occurred. Hereafter education will mean the culture of the whole body—handcraft as well as headcraft. It follows that each house that is intended for a home should have its provision for the education of the hand—a workshop, a tool room for every member of the family to find his chosen occupation. If necessary, a separate building should adjoin the house. Where there are five children there may be five separate occupations chosen. One of mine prefers carpenters' tools and engineering, another printers', and a third cares mainly for horticulture.

OUR SCHOOL SYSTEM FAULTY.

I am now advocating such household appurtenances purely on the score of health. Our school system is a blunder. No child should study from 9 till 12, and especially in rooms where they must sit. A child at study should, much of his time, be on his feet, or reclining if he chooses, and changing about. When you add the books taken home for evening study, you have shown up our common method, whereby, to perfection, we destroy the health, vigor, beauty and character of our children. Every one is damaged, and the majority are spoiled. I insist upon play as a duty, as a part of life, as in fact itself a part of study. A teacher of play would be far more sensible than the piano at $2 to $4 a lesson.

How about dancing? As a matter of health it is generally of no advantage whatever. It is no sooner acquired than night is turned into day, and then the play is carried to such extremes as to be disastrous. I have watched this matter from a physician's standpoint, and object totally to three or four hours and especially to six or eight, devoted to hilarious dancing, and those hours the ones that nature devotes to sleep. There is another point I cannot overlook. It is the close contact of bodies in round dances—a contact unwholesome, purely from a physical point of view. The moral effect others may discuss, but I object to any delicate person being borne so closely into the atmosphere of grosser, coarser ones. The physical effect is not likely to be understood, but it is seriously evil. I do not, therefore, care for dancing, unless conducted as a part of home sport, as it is not likely to be.

A GOOD MORAL ATMOSPHERE.

It is, however, folly to talk of a healthy home that is not charged with a good moral atmosphere. I assure you the moral atmosphere is as real and tangible and efficient as the physical, and those who refuse or neglect to consider it will suffer accordingly. It is impossible for us to have about us, in close intimacy, those of gross temperament and physical sensuality, and not feel the effect on our bodies as well as on our minds. This holds good, of course, of our own relation to ourselves. If we do not sustain a spirit of self-control and manly aspiration in our souls, our bodies are diseased as a consequence. One-half of all disease is the result of unsanitary mental conditions. Uniform honor, good faith, manhood, temperate desire, kindness, will have a powerful effect in sustaining vigorous physical health.

I have a brother physician who insists that if all people would keep in the best of humor for one hour before eating, during meals and for one hour after, they would never be troubled with any disorders of digestion, or with headaches. He is a trifle crochety, but he is not far from right in his valuation of good temper as a foe to dyspepsia. At meal time it is peculiarly important that all should be decorous and kindly. The fashion of haste and fret at our meals is an indication of nervous irritation, and affects digestion directly. But in all other ways a house should be delivered from the destructive influence of immoral or unmoral habits. An habitual scold is not only a disagreeable termagant, but a destroyer of the physical health of her children. The effect on moral character is tallied by the effect on the features of the young. I have supposed some to be more sensitive to moral atmosphere than others, but on larger experience I am satisfied that all are influenced in this way, and to their serious detriment. The art of building a healthy home is dependent upon the art of being ourselves pure hearted and honorable, generous, just and adaptable.—M. Maurice, M. D., in Globe-Democrat.

An Observant Citizen's Calculation.

An observant citizen makes the following calculation, which is given for what it is worth. Out of every ten average American men, one will take the wrong side of the walk, two will stand in the door of a car if there is no seat, three will sport a toothpick in their mouths in public, four will expectorate in public places, five will carry an umbrella horizontally under their arm in the street, six will cross their legs in a car, seven will fail to remove their hats in a down town elevator when a lady enters, eight will forget to shut a car door when they go in or out, nine will risk their lives to catch a train when they could just as well wait for the next one, and the whole ten will growl all their lives at public nuisances without doing anything to abate them.—New York Tribune.

"Do you know what makes May such an unhealthy month in Atlanta?" asked a citizen. "Why it is all on account of these abominable ailanthus trees. In 1878 there was an ordinance to have them all cut down and allow no more to be planted, but still they flourish and bring sickness and death. May is their full blooming time, and consequently everybody is sick during that month. The flower is rank poison to children and adults having any kind of membranous trouble."—Atlanta Constitution.

Brain Workers and Rest.

Some brain workers toil on year after year, contenting themselves with the relaxation of a day or two now and then. They have no real vacations, and the brief intervals that they are away from their duties do them but little good, not being long enough for them to forget their work and vexations and get out of the groove they have been running in. There comes at last to these men a time when memory weakens, when it is hard for them to fix the mind upon one subject, and their work seems to grow more and more irksome, and in conversation there is a slight tendency to incoherence. It is rather difficult for them at times to express themselves clearly; the suitable words do not come to them as readily as they once did.

When conversing they start in well, but after a short time their ideas are somewhat confused, and they are obliged to make considerable effort to keep their attention fixed upon the subject they are discussing. In writing there is a hesitancy, especially on long words or sentences. They are obliged to stop and think, seeming to drop the thread that they have been holding. These are signs of mental failure, which must not be disregarded. In this condition of brain exhaustion, not only are the reasoning faculties sluggish, but unusual effort is required from the weakened will to keep the attention fixed. Good mental work is then accomplished only at the expense of the brain, which is still further weakened by every intense effort.

The time has now come when mental rest is imperative, and it should be as complete as possible. A long vacation should be taken; short rests are not likely to do any good. A sea voyage promises the greatest good to the weakening brain worker. On shipboard he seems to drop almost entirely out of his old life. His vacation should not be of less than a month's duration, and it ought to run on for several months. Failing to take the needed rest, insanity is very likely to be the penalty.—Boston Herald.

The Toad and the Duke of Wellington.

Short Cuts has unearthed a peculiarly delightful letter of the Duke of Wellington's, which runs as follows: "Strathfieldsaye, July 27, 1837.—Field Marshal the Duke of Wellington is happy to inform William Harries that his toad is alive and well." During one of his country walks the duke found a little boy lying on the ground bending his head over a tame toad and crying as if his heart would break. On being asked what was the matter the child explained that he was crying "for his poor toad." He brought it something to eat every morning, but he was now to be sent away to school a long distance off, and he was afraid that nobody else would give it anything to eat and that it would die.

The duke, however, consoled him by saying that he would himself see the toad well fed, and by further promising to let the boy hear as to its welfare. During the time the boy was away at school he received no less than five autograph letters similar to that given above, and when he returned for the Christmas holidays the toad was still alive to gladden his heart. The story is even more delightful than that of the duke's indignation when he found that a party of children at Strathfieldsaye—among whom, we believe, was the present prime minister—were having their tea without jam. The incident roused him to immediate action, and he at once rang the bell and issued a general order that "children's tea" was never to be served in his house with such "maimed rights."—Spectator.

A Shoe Blacking Syndicate.

The syndicate shoe blacking on the Pennsylvania ferryboats is not a success. The company receives $2,000 for the privilege from the padrone who employs the boys who nominally polish passengers' boots. The padrone is a regular slave driver, and the boys in order to satisfy his demands try to polish three pairs of boots on one passage. They are not able, in the time occupied by the ferryboat in crossing, to give more than a few daubs of blacking and a hurried brushing, and by the time the passenger gets to Broadway his boots are dull and dirty.

The boys are also very persistent, filling the cabins with their calls until they have become a regular nuisance. It was a sorry day for the railroad's reputation when it sold this privilege to the Italians. Meanwhile the padrone is clearing about $3 a day out of every boy. He gives them $1 a week and keeps two on each boat. It is estimated that the padrone makes $10,000 per annum on the Pennsylvania boats alone, besides large sums on the Staten Island boats and the other North river ferryboats.—New York Gor. Philadelphia Bulletin.

Reveling in Fiction.

"I am literally wallowing in fiction just now," said a young Chestnut street merchant. "My family are out of town and I am taking advantage of the opportunity to read up the standards. Let me see what I have on hand at present, for the tables, chairs and even the floor of my sitting room are absolutely flooded with the works of the great novelists. I have all Dickens' novels, all Sir Walter Scott's, all Charles Reade's, all Thackeray's, some of Lever's, some of Cooper's, some of Clark Russell's, all of Rider Haggard's, and—well, others too numerous to mention. All my copies are, however, what are known as 'cheap libraries', and I picked them up still cheaper at second hand. I don't think the whole lot cost me quite $5, so I shall get my acquaintance with the standards at a wonderful bargain. There's no excuse for a live American not being well up in the great romancers, believe me!"—Philadelphia Inquirer.

Too Matter of Fact.

Mrs. Malaprop—What's the matter with your husband?

Mrs. Brown—I guess he got out on the wrong side of the bed this morning.

Mrs. Malaprop—Why don't you stop that by putting the bed against the wall?—Epoch.

FREAKS OF INSANITY.

More Prevalent Among Men Than Women.

WHERE INSANITY IS ALMOST UNKNOWN.

Insane People not Deceived by the Delusions of Their Fellow Patients.

Insanity is a peculiar disease, more prevalent among men than women. As a rule, insane men either die or are cured in the course of a few years, and of the former probably 90 per cent die of general paralysis. It is the result either of overwork or bodily excesses, and generally attacks a man between the ages of 30 and 40. An interesting fact in connection with the insane is the great age to which so many female lunatics live. A madwoman is really a first class insurance risk. In almost every lunatic asylum the women greatly outnumber the men, not only because they are so long lived, but also because they are so seldom cured.

It commonly surprises visitors to a lunatic asylum to find that insane people are not for a moment deceived by the delusions of their fellow patients. Each will think himself perfectly sane and healthy, while knowing that all the others are hopelessly mad. Although a lunatic's mental freedom may be destroyed, it does not follow that his consciousness is abolished. A minister who was called upon once to preach to a congregation of lunatics treated them to a sermon he had written for children. Much to his surprise, he received an indignant letter from one of his listeners afterward reminding him that while they might be insane, they were not idiots, and that many of them were fully his equals in education and intelligence.

It is a novel experience to attend a religious service at an insane asylum. Imagine a congregation of lunatics and imbeciles, men on one side, women on the other, in all stages of physical decay and all degrees of madness. Helpless, old, gray haired fellows, with staring sunken eyes and hollow cheeks, mumbling and groaning to themselves, in utter unconsciousness of their surroundings. Gaunt looking, wild eyed women, with nothing human about them but their vanity. Wellington and Napoleon, Elizabeth and Mary Queen of Scots, Catherine de Medicis and Diana of Poitiers, in full costume, facing each other, God and the devil, side by side, restless girls, who make their handkerchiefs into dolls and rabbits and talk baby talk to them, occasionally beating them and tossing them in the air.

Interspersed throughout this motley crowd are bright, keen, young faces, with no apparent trace of their terrible curse to any but an expert observer, refined and cultivated women, who in their lucid intervals are as pure and spiritual minded as angels, and yet are like the devil incarnate when the mania seizes them, fine, manly looking gentlemen, devout, dignified and scholarly today, to morrow like the herd of swine into whom the evil spirit enters. On either side of the chapel sit the keepers, alert and watchful in case of an emergency. Facing them is the chaplain, a stupid listless looking man, relegated to this depressing field by his own lazy inefficiency.

All writers on disorders of the mind have found it difficult to define insanity. In medical jurisprudence, illusions, delusions, hallucinations, incoherence and delirium are all phases of insanity. The "Christian Science" people say that all sin and all sickness are insanity. Insane people frequently reason correctly, but from erroneous premises. A delusion is nothing but a false premise—the conclusions drawn from it may be entirely logical. There is no reason why a man who thinks he has legs of glass, and in other respects is in possession of all his faculties, should not be capable of making contracts, and responsible for legal acts which have no connection with the subject of his madness. Such a species of insanity seldom prevents a man from managing his own affairs or undertaking any legal relations for others.

Most people are prone to delusions or illusions of some form or other. Many people never see things exactly as they are. If delusions and hallucinations are a test of insanity half the world would be in lunatic asylums.

It is an interesting fact, recorded by Pritchard and others, that among savage nations mental diseases are almost unknown. They come forward with the dawning of civilization, and keep pace with the advancement of mental culture. The restraints imposed by social order, the diversity of interests, the pressure of universal competition, overwork, griefs, anxieties and disappointed hopes, the artificial life of cities, are among the causes most influential among civilized people in the development of insanity. Among weak minded and half educated people emotional religious revivals also operate to a great extent. In France, however, the opposite extreme is found, for while indifference to religion saves the people from religious insanity, great numbers lose their reason through the vices for which their low moral standard is responsible.

It is a curious fact that raving maniacs are never attacked by any contagious disease. Even consumptive disorders, dropsies and other chronic maladies have disappeared on the accession of violent insanity.—New York Post.

Inventor of the Dynamite Gun.

"There is an untold story connected with the invention of the dynamite gun, which is worthy a place in the story books alongside the accounts of Robert Fulton's tea pot, Isaac Newton's falling apple and Galileo's swaying chandelier." Thus said a Michigan congressman who was among those watching the recent launching of the dynamite cruiser Vesuvius. "The dynamite gun, which is now thought to be such a wonder," he continued, "grew from a piece of gas pipe mounted on a saw buck. Some five or six years ago a school teacher at Detroit conceived the idea of using a dynamite projectile thrown from an air gun. He got a long piece of ordinary three quarter inch gas pipe, about twelve feet in length, and made a rough air gun to put his idea into practice. This was mounted on a saw buck, and those who saw the odd thing laughed at it as the product of some crank's brain. It was taken to Fort Wayne, below Detroit, where the officers tried it out of charity to the supposed crank. It threw a small dynamite shell a short distance. Several wealthy Detroiters were impressed with the value of the gun, and a company was soon organized to take hold of its manufacture. The perfected dynamite gun came from this obscure beginning of a gas pipe mounted on a saw buck."

At this point some one asked what became of the schoolmaster.

"Oh, he has been lost sight of," concluded the congressman, "the same as most other inventors."—Washington Cor.

INYO INDEPENDENT.

C. Mulholland,

FRIDAY, JANUARY 23..... 1891

County Official Paper.

It is proposed to make very large additions to the White House, at Washington, as it is alleged to be entirely too small to accommodate the President and his family, and all the clerks and office room required. When the house shall be enlarged it would also be a very great improvement if a provision could be made that no no small men shall be sent to occupy it.

It is a very significant fact that in an interview with General Miles the Brule Indians said they were quite willing to go back upon their reservation if an army officer should be sent with them as agent. Most of the trouble with Indians has been caused by thieving agents who robbed them without mercy, and it is highly creditable to the army that the Indians find they can trust the soldiers.

In a speech made at a public dinner recently the German Emperor expressed strongly against silver coiuage. He said the trading nations of the world would soon agree upon the universal adoption of the single gold standard for coinage. The Emperor is very eager to keep up the immense army he now has. This forces his government to borrow enormous sums, and so he is at the mercy of the money lenders and must support whatever financial policy suits them.

In the death of George Bancroft the United States has lost a citizen whose life and works will reflect the highest honor upon his country through all the coming ages. When living millionaires are forgotten, or remembered only as Croesus and A. T. Stewart are remembered, the great mind and pure life of George Bancroft will be held in highest honor. His name is forever linked with the history of California. As Secretary of the Navy in the Cabinet of President Polk, he issued the order for the navy to take possession of the territory that is now our own State.

A bill has been introdused iu the Legislature to limit the rate that may be charged by corporations for water supplied for irrigation. The rent charged for the use of water must be fixed so low that the profit shall not exceed one per cent on the investment. This bill should be entitled "An Act to Prevent The Further Developement of Irrigation." It is an unwise proposition. There is no direction in which greater encouragement should be given to the investment of capital than in irrigation works. The bill will never become a law in its present shape.

Irrigation creates wealth almost with the suddenness of enchantment. In the counties of Los Angeles, Orange, San Bernardino, San Diego, Fresno and Tulare, in ten years the total wealth has increased one hundred and forty-one millions of dollars. Before irrigation was extended all of the land was worthless desert. On the Alessandro irrigation district property has increased from $10 to $120 an acre in six months, and a tract of 8400 acres of land that one year ago was of little value has since been sold in small lots for $560,000.

Wealth or prominent position are not always the result of superior ability, learning or diligence. Many men have wealth acquired by every form of knavery that can be practiced without being punished as a crime, and not a few gain prominent position by the use of all the despicable arts that cunning without conscience can suggest. The man without honor and insensible to shame will often gain money or influence because he will, without hesitation or scruple, do or say what an honorable man would never think of doing or saying. Impudence is not seldom mistaken for real ability, and the scoundrels often succeed better than men of solid merit who have regard for truth and manhood. Knavery triumphs even over death, and the costly monument inscribed with lying praises rises over the rotten carcass of the thief who stolethe money that paid for it. While all that is mortal of the man who loved virtue more than lucre is consigned to earth without anything to mark the spot where he is laid. But coin and consequence, dishonorably gained, are not the most enduring good.

"The man o' independent mind,
He looks and laughs at a' that."

And knavery or sham can never be so entirely concealed that they escape discovery and contempt.

A BARRIER BETWEEN THEM.

Hostile Neighbors in Africa Who Have Established a No Man's Land.

A little British expedition recently steamed far up the Benue branch of the Niger river in a small steam launch, and finally entered a tributary of the Benue and explored a region which no white man has ever visited before. The most interesting thing about their journey was the curious experience they had with the natives.

They had been passing for a good while through a region that was inhabited by Moslem blacks, fruits of the rather severe methods of conversion employed by the Arab invaders of the Soudan. The country was very fertile, and the people were numerous; but all of a sudden, though the country still wore its usual aspect, and the soil was apparently rich, population entirely ceased. For a stretch of over twenty miles not a hut was to be seen, nor was a single sign of human life anywhere observed. The expedition wondered at this remarkable state of affairs, for the country was certainly inviting, and they could not imagine why it had no inhabitants.

All at once, however, as they rounded a bend in the river they saw big crowds of natives running down the slopes of the hill to the bank. They brandished their spears at the white men on the little boat, and told them to go back, for they wanted no Moslems in their country. There was an interpreter on the vessel, who succeeded in convincing the natives that the visitors were not Moslems, and thereupon the people became quite friendly.

Then the reason for this cursous lack of population was ascertained. When the tribes who had been converted to Islam found the natives near them were just as strong as they were, the spread of their religion in that direction abruptly ceased, but these heathen people and the Moslem converts near them could not live at peace with one another. It was finally decided that as they could not be good neighbors, a stretch of country should be placed between them where no one should live, and in that way they expected to get along with less bloodshed.

So all the people who inhabited this fertile region, about twenty miles wide, packed up their little belongings and moved away, and the stretch of country thus came to be without a single inhabitant. Today it is a No Man's Land, and the only reason is that the people who are neighbors there cannot live on friendly terms, and, having tired of fighting, have put this barrier between them.—Boston Herald.

Freak of a Somnambulist.

A young man who is well known in this city had an unpleasant experience a short time ago. He is a somnambulist and often does peculiar things in his sleep. He went to visit some friends in Waterbury, and as he was not in the habit of retiring as early as the members of the family he was visiting, he remained up and took his shoes off before ascending the stairs.

A few nights after his return to his home he lay down on a lounge and fell asleep. After sleeping soundly a half hour he arose, walked to the foot of the stairs, took off his shoes, and not being content with doing that, he drew off his stockings also. He then clambered upstairs to his room. Taking a match from his pocket he brought one of his feet up so that he could reach the bottom of it, and then deliberately scratched the match on the flat surface.

The match did not light immediately, but he kept on scratching. Finally the match did light. The holder was unconscious of the fact and kept on scratching. Suddenly he awoke in great pain from the burn. He limped about for several days, and since that time questions about the proper mode of lighting a match have been distasteful to him.—New Haven Palladium.

Honors to a Dead Dog.

I saw a queer corpse in the undertaking establishment of Lewis Jones, on LaGrange street, a few days ago, queer even in that grim receptacle. On the embalming board lay the body of a pretty brown spaniel and near by a handsomely constructed hardwood box, elegantly lined, which was to be doggie's chamber when planted in the cold, cold ground. The animal was the pet of a rich lady, who, when he one day became ill, sent him to the dog hospital, and when he died had his body cared for with as much tenderness as though he were a human being. Doggie was shipped from here to the lady's former home in Maine, where the animal was interred with full honors.—Boston Record.

A Poor Sportsman.

We have all encountered him in the field, the man who howls like a maniac at his dog. It is not because the dog is deaf, for even if he were there would be no need of the howling and shrieking, but it is that the howler knows not a bit better. He has the notion that a hunting dog must be worked like a sledge dog amid Arctic ice fields, and so he makes an Esquimau of himself every time he goes shooting. And none of us ever yet saw a dog that worked any better for the racket than he might work, or might at least have been trained to work, without it.—Forest and Stream.

Well Preserved Blankets.

Hon. Moses Tenney, of Georgetown, state treasurer, and receiver general from 1856 to 1861, sleeps between blankets woven by his wife's mother 100 years ago. The blankets have been in use the greater part of the time since they were made, and are in a remarkable state of preservation. Mr. Tenney is nearing four score years, and is remarkably active for one so old.—Haverhill Bulletin.

Old Enough.

Mrs. Grubbs—And so your daughter's wedding is set? Don't you think she is too young to marry?

Mrs. Dubbs—No, indeed. She has ruled the whole family for three years.—Good News.

Cremation at Milan.

The Italian clergy, unlike the clergy of France—and for the most part of England—have never made any objection to cremation, and at Milan, where nearly 2,000 bodies have been cremated during the last thirteen years, and where at the present rate of increase cremations will soon reach an average of one a day, the same funeral service is performed, whether the corpse be destined for slow corruption under the earth, or for rapid incineration above ground. Two systems of cremation are followed at Milan.—Westminster Review.

Knee Breeches and Silk Stockings.

And so knee breeches and silk stockings are to be the fashion for full dress occasions in England this winter. And why not in America as well? Long have gentlemen in society struggled to be allowed to make some distinction between their own dress and that of the waiters. But fashion or custom is inexorable. A year or two ago a very sensible society lady in New York gave a ball, at which the gentlemen were requested to appear in variously colored garments. The result was charming, a revival of the days of Louis and of the Charleses. But the fashion thus set, or attempted to be set, did not continue. Why not no one can tell.

After this one ball was over the crimson and blues and purples were laid aside and appeared no more, and their owners reappeared in their somber "claw hammers." To resume the garb of our forefathers for ordinary wear would be an absurdity, but to revive these graceful and elegant garments for dress occasions would certainly be good taste and could not be unfavorably received by the ladies. The revival of the silk stockings and breeches in English society is perhaps a forerunner of some such revolution. Already we of this country are growing sensible in the matter of summer attire; why should we not grow sensible as well in our garments for social occasions?—Boston Advertiser.

Naming Colts.

Naming colts as they are brought into the world on a big stock raising farm might seem to be a simple operation; but, just as when the parents of a dozen children find themselves short of names and have to resort to a Biblical or classical terminology, so do the owners of a lot of horses kept for the purpose of raising horses for the turf find themselves running short of names. Who has failed to notice the odd nomenclature of the race course? The proprietor of a farm and a big lot of thoroughbreds in Pennsylvania has made a rule for himself. To all the colts born in the first year, under this rule, he gave names beginning with A, in the second year B, and so on. He put the idea into practice nine years ago, and has reached the letter I. Sometimes there are queer combinations of names. For instance, a colt was named Harmony, and the next year his brother had tacked to him the name Impudence. As the breeder has fifteen colts this year to be named with names beginning with the letter I, he confesses himself puzzled to originate attractive and orotund names enough to go around.—New York Sun.

Punished for Being Honest.

John Brannon, a man bearing a good character, found a check at the Edinburgh exhibition. He could not read, and the friends to whom he showed the check advised him to keep it and look out for a reward. This he did, buying the Edinburgh papers for a month, at the end of which time he handed over the check to the police. He then got his reward.

He was prosecuted for not giving up the check within the prescribed time after finding it, and was brought before Bailie Walcot, who, although "he did not think there was any intention of theft," imposed a fine of £1, or two days' imprisonment, "it being too serious an affair for his lordship to pass by." The bailie therefore expressly finds that the man was not a thief. Why, then, the sentence? Evidently as a punishment for honesty, since if the man had destroyed the check instead of delivering it to the police he would never have got into trouble.—London Truth.

A Cool Thief.

A thief went through the Mount Vernon, O., Sanitarium the other day. He drove up to the door of the building in a buggy, hitched his horse, and went in. Soon after a lady patient entered her room and found a man there with a two foot rule measuring a window. Turning to her he said: "There seems to be only one slat broken out of that blind, and I've only found four so far in the house." He then went out and went through the other rooms, and, having completed his researches, got into his buggy and drove away. Soon after the lady who saw him in her room found that her purse, with $17, was missing, and an investigation proved that the thief had ransacked all the rooms right before the eyes of the manager and all of his assistants.—Cleveland Leader.

Suggestions to Secretary Tracy.

Secretary Tracy is selecting names for cruisers, and we suggest for his consideration Raleigh, North Carolina, or Bell, in honor of Admiral Henry Bell, of Orange county, who lost his life in Japanese waters in 1867. Admiral Bell was in Perry's expedition that opened up Japan to the commerce of the world and was engaged in the fight with the Pei-Ho forts. As we have had a Roanoke, perhaps he might like the Swannanoa.—Raleigh (N. C.) News.

The Holy Carpet in Quarantine.

"The holy carpet," which is now being brought back to Cairo, where it will have to submit to the indignity of quarantine for fifteen days, is one of those which are periodically taken to Mecca, there to be sanctified, and is made of a thick sort of silk, embroidered with letters of gold, each letter being two feet in length and two inches broad. It covers what is known as the Beat-Allah or inner sanctuary of the temple.—Paris Galignani.

Blondin Still Active.

Thirty-one years ago M. Blondin made his famous journey across Niagara falls on the high rope. It may surprise many of our readers to learn that the veteran gymnast is not only still living, but that he was a few days since, although now in his 67th year, again astonishing large crowds in the neighborhood of London in the old style and with the old agility and daring. The occasion was a two days' fete at Brockwell park, Herne hill, prior to the handing over of the beautifully wooded estate to the public, and Blondin gave his high rope (seventy feet) performance twice each day. The hempen track was not only high, but unusually long, and upon it he went through a varied entertainment of more than an hour's duration.

Appearing in glittering brazen armor, he rang and skipped along the cord blindfolded (by means of a sack pulled over his head) as well as free, and subsequently carried his son upon his back, stood upon his head, and rode a bicycle with grooved wheels. His piece de resistance, however, as in the olden times, was his appearance with an oil stove strapped to his back, which stove he balanced (as well as himself) on the center of the rope while he prepared, cooked and "tossed" a savory omelette.—Belfast News.

HENRY M. STANLEY

IN DARKEST AFRICA

The complete story of Stanley's recent thrilling adventures and the disclosure of his important discoveries will appear for the first time in the work written by himself, entitled "In Darkest Africa." Do not be deceived by any of the so-called "Stanley books" now being offered as "genuine" and "authentic." To no one of these has Stanley contributed a line.

There is no question about this statement being correct in every particular. We guarantee it, and will give particulars on application.

CAUTION In order not to be misled, see that the book bears the imprint of CHARLES SCRIBNER'S SONS. And that the canvassing agent carries a certificate of agency from us.

COURT NOTES.

Geo. M. Gill, Superior Judge.

MONDAY, January 19th.

Frank E. Densmore filed bonds as Notary public.

A. A. Diaz et als. vs. N. Rhine—Filed demurrer to complaint.

TUESDAY, January 20.

Estate of William Walker, deceased—W. H. Walker, Administrator, filed bond.

Estate of J. W. Harvey, deceased—Entered judgment.

WEDNESDAY, January 21st.

Estate of E. Mallory, deceased—Order of Court setting apart personal property for use of family and making family allowance.

THURSDAY, January 22d.

Estate of John Mullane, deceased—Petition filed of Richard Hessian for probate of will.

Mr. S. G. Gregg was in town last Monday.

Mr. Al McGee was down from Fish Spring yesterday.

Mr. S. P. Roberts was down from Big Pine on Monday.

Mr. J. A. McKenzie was in from Darwin at the beginning of the week.

Mr. J. Peregrine of Bishop was in town during the week on business.

Judge Hakes, late of Mono County, has gone to Arizona to make his home there.

Mr. A. Plumley came down from Bishop on Wednesday and was in town a day or two.

Mr. Frank Densmore has been appointed a Notary Public and is now ready to attend to all duties in that line.

Mr. D. Levy came down from Bishop on Wednesday and remained in town a few days. His wife accompanies him.

The Legislature of Nevada met on Monday of this week. California congratulates her neighbor—misery loves company.

The Indians held a fandango at Black Rock at the beginning of the week. It was but such a social gathering as is common to them.

At Independence rose bushes and other plants are leaving out and the weather continues warm and everything indicates that spring is at hand.

Jewett Adams, Ex-Governor of Nevada, has been in the valley during the week. He came to Independence yesterday and goes north tomorrow.

The Supervisors of Kern county have instructed the District Attorney to begin suit against the Railroad Company for taxes now delinquent.

Mr. A. O. Collins came down from Warm Spring on Wednesday and is yet in town. Mr. Collins is Inspector for the Masonic District that includes Inyo County and is attending to official duties in that connection.

A Sate Citrus Fair will begin at Los Angeles on March 3rd. An extensive and liberal premium list is offered for exhibits. The Fair at Los Angeles last year was a great success, and no effort is spared in preparation to make the coming Fair still more successful.

A movement has been started at Bakersfield for the purpose of keeping business houses closed on Sunday. The *Democrat* strongly supports the project. If the business men of Bakersfield will observe how business is done in Los Angeles, San Francisco and other large cities, they will not hesitate to close up on Sunday.

On January 31st of last year the INYO INDEPENDENT contained the following: "No trains have passed over the southern division of the C. & C. Road in nine days Snow drifted on the track where it crosses the spur of mountains south of Belleville." Up to date there has not been one stormy day this winter.

It will be time well spent for the Supervisors at their next meeting to examine some of the expense bills connected with the last trial of Elliott at Bakersfield. The bill of the shorthand reporter is said to be nearly eight hundred dollars and several tax-payers of Inyo county would like to see an itemized statement of that bill.

Last week a defective stove pipe caused a fire in the residence of Mrs. Schuman at Bridgeport. The *Chronicle-Union* says that for a time it looked as if the building must certainly be destroyed, but by hard work and a good deal of daring it was saved. The townspeople gathered around with buckets, men climbed upon the roof, and all worked till the building was saved.

On Monday James M. Eubanks was hanged at San Jose for the murder of his own daughter at Los Gatos. Eubanks was a worthless brute; his daughter was earning an honest living by working as a domestic servant. On December 22nd. 1889, he went to the place where she was employed and fired the contents of a shot gun into her, killing her instantly. The rope nearly tore his head off; if he had fifty necks they should all have been broken.

The Annual Report of the State Mineralogist is the best issued since the office was created. It is a large volume filled with carefully collected and well arranged information about the mining interests of the State. Several well prepared maps of different mining districts accompany the Report. Mr. Irelan, the State Mineralogist, has done good service since he has been in office, and not the least is the preparation of this Report.

Preliminary Examination.

On Monday morning Manuel Leon was brought into Court at Independence for examination on charge of murder. On Sunday, December 21st, the body of an Indian woman named Maggie was found at Independence with the throat cut. Leon is accused of the crime. The examination occupied three days. Most of the witnesses were Indians, and taking their testimony was very tedious. Mr. William Birchim of Round Valley was interpreter. He speaks the Piute language as one of the Indians and was very patient and careful. It was very difficult to get most of the witnesses to give direct answers to the questions, long dialogues being frequent between the interpreter and the witness on the stand, each talking rapidly in strange gutteral tones, and Mr. Birchim putting the question in different forms so as to make it possible to get answers. The Indians do not know anything about the names of months, nor could they fix time by dates, and this added to the difficulty of getting the testimony in legal form. One witness spoke the Spanish language, and Under-Sheriff Holland was interpreter. The whole made a strange mixture of tongues—English, Spanish and Indian—and the Indians, with their blankets wrapped about them in colors of bright red, yellow and blue made an equally strange spectacle in a Court-room. No testimony was offered to show that the defendant had been in company with the deceased or had met her on the day of her death or at any other time. No witnesses had seen him at or near where the body was found, on that day. It was not tried to prove at what hour the murder was committed. C. W. Robinson testified that on the Saturday evening before the body was found about 7 o'clock he saw the defendant in the lane at the place where Doctor Woodin lives; there was some moonlight. Defendant was under the shadow of trees and appeared to be wiping his hands. Witness could not tell on what he was wiping them. The place described is about a quarter of a mile from where the body was found. This is the only direct evidence offered connecting the defendant with the crime. An Indian testified that he had traced and examined foot-tracks leading from the body toward a brook and that the tracks corresponded with shoes he had seen the defendant wear on the day before the body was found. A small tin box was offered as evidence. A witness testified that the box had belonged to the deceased and that defendant had given it to an Indian woman on the day the body of the murdered woman was found. There was a stain or splatch upon the lid of the box that might have been blood, but no evidence was offered that it *was* blood. On Wednesday Sheriff Gorman testified that the stains on the box were not so clear at that time as when it was sent into the Court on Tuesday. Under-Sheriff Holland testified to the same effect. W. P. Yaney testified that he had traced foot prints from the body of deceased to the verge of a stream. He did not testify who made the tracks. The examining Magistrate could not find that any evidence had been offered fixing the crime of murder, or any other crime upon the defendant, and was convinced that if sent to trial evidence could not be had to secure his conviction. The Magistrate therefore ordered that the defendant be discharged from custody. The District Attorney did his whole duty in trying to get all the evidence possible in the case to fix the guilt of the crime where it belonged. There is a strong belief in many minds that Leon committed the crime, but when it is clear that evidence cannot be had to secure conviction it would be useless to go to the expense and trouble of a trial. John W. P. Laird and P. H. Mack, Attorneys at Law, were counsel for the defendant, and subjected most of the witnesses to a close examination. C. Matholland, Justice of Peace, presided.

Apportionment.

The County Auditor has made the following apportionment:

State Fund	$6745 53
Salary Fund	9413 11
Bond Fund	3361 75
Gen. Expense Fund	3361 75
Building	2958 47
School Fund	2689 46
Co. Road Fund	2689 46
Bridge Fund	1344 73

The County Road Fund is apportioned as follows:

Gen. Road Fund	$672 36
Road Dist. No. 1 Fund	176 82
" " " 2 "	310 54
" " " 3 "	370 61
" " " 4 "	230 29
" " " 5 "	454 09
" " " 6 "	325 89
" " " 7 "	148 76

Please Tell Us.

John Sherman never misses an opportunity for expressing his opposition to silver coinage. John is a millionaire. He began life poor, has never inherited wealth, has never gained wealth in any professional calling, in commerce or in manufactures. He has always been an office holder with no visible means of earning money beyond his official salary, and on all sides it is alleged that the salary of such offices as he held is entirely too small. If Mr. Sherman would kindly tell the poor men who mine silver, or the millions who are glad to have it to use as money, how millions of money can be secured without sweat or toil on his part, doubtless they would care as little for silver coinage as he does.

Brothers Indeed.

Last Sunday in Chicago 132 Knights Templor each submitted to have a piece of skin cut from an arm or leg, to be transplanted upon a brother Sir Knight, who had a large portion of his thigh cut out because of a cancer. When it was found that so large a quantity of live human skin was necessary to secure the recovery of the sick Knight, every member of the Commandery to which he belonged promptly volunteered to supply a portion from his own body. Several of the Knights fainted under the operation but not one of them flinched from the sacrifice. At last reports the operation promised to be successful.

Profitable Investments.

The principal engineer of works for the irrigation of 60,000 acres of land in Kern County informs the *Californian* that the total cost of the works has been about $900,000. This is an average of $15 per acre; for one third of that expense per acre at least 300,000 acres of land could be irrigated in Owens Valley. But the investment in Kern County has been enormously profitable. Every acre of the irrigated land is now worth at least sixty dollars and much of it is worth a great deal more. There is no safer nor more profitable investment for capital than in irrigation works.

The Canal Project.

The managers of the proposed canal to Salt Wells Valley say that a few riparian owners along Owens river have not yet granted to the projectors a relinquishment of riparian rights, and that till this is done work upon the canal will not be begun. It may be that the riparian owners are holding back till sufficient security shall be given them that work will be completed within a reasonable time after relinquishment of their rights, and that they will be supplied with water as needed.

OFFICIAL.

PROBATE NOTICE

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Mullane, deceased.

Notice for publication of time appointed for proving will, etc.

Notice is hereby given that Monday, the 9th day of February A. D. 1891, at ten o'clock a. m. of said day, at the Court-Room of said Court, at the town of Independence, in the County of Inyo, State of California, has been appointed as the time and place for proving the will of said John Mullane, deceased and for hearing the application of Richard Hessian Sr. for the issuance to him of letters testamentary thereon.

J. N. YANDELL, Clerk.

P. W. FORBES, Attorney for Petitioner.
Dated January 22d, 1891.

DELINQUENT SALE NOTICE.

STEVENS DITCH COMPANY.

Location of principal place of business, Independence, California. Location of ditch, near Independence, Inyo county.

And in accordance with law, and an order of the Board of Directors, made on the 29th day of Nov., 1890, so many shares of each parcel of such stock as may be necessary, will be sold at public auction, at the office of the Stevens Ditch Company, Independence, California, on Saturday, the 7th day of February, 1890, at the hour of 3 o'clock p. m. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

P. H MACK, Secretary.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2,324, Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.

Dated Cerro Gordo, January 2, 1890.

ORDINANCE No. 32

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

SECTION 1. The regular meetings of the Board of Supervisors of Inyo County, State of California, must and shall be held at the Town of Independence, in the County and State aforesaid, being the County Seat of said County on the first Monday of February, May, August and November of each year, and must continue from time to time until all the business before the said Board is disposed of. Such other meetings must be held as are otherwise provided by law.

SECTION 2. This ordinance shall take effect and be in force on and after fifteen (15) days from its passage, and Ordinance No. 31 of said Board of Supervisors together with all ordinances or parts of ordinances in conflict herewith, are each and all of them hereby repealed.

SECTION 3. This ordinance shall be published in the INYO INDEPENDENT, a newspaper published in said Inyo County, at least two weeks, said publication to be made for said time and before the expiration of said fifteen days.

This ordinance was passed by the Board of Supervisors of said Inyo County, State aforesaid, at a regular meeting of said Board, held on January 5th, 1891, by the following vote: AYES—J. J. Stewart, Seth G. Sneden, R. Love and J. B. Steward.

Supervisor Eddy not being present.

Attest: JOHN N. YANDELL, Clerk of said Board of Supervisors. (SEAL)

By ALEXANDER CLARK, Deputy Clerk.

J. J. STEWART, Chairman.
SETH G. SNEDEN,
ROBERT LOVE,
J. B. STEWARD.

[ENDORSED.]

ORDINANCE NO. 32.

Filed and recorded January 5th, 1891, in Ordinance Book "B" on page 71 et seq.

JOHN N. YANDELL, Clerk.
by ALEXANDER CLARK, Deputy Clerk.

Proposals for Care of Indigent Sick of Inyo County.

Notice is hereby given that sealed proposals will be received by the Board of Supervisors of Inyo county, at the office of the County Clerk until 10 o'clock A.M. on Wednesday, Feb. 4, 1891, to contract for the care of said indigent sick for the term of one year from May 10th 1891 to May 10th, 1892, said bids to designate the amount for which parties contracting will care for said indigent sick on the basis of an average of four patients per day throughout the year, and to include all medicine, nursing, board, lodging and washing. Said bids to include the burial and funeral expenses of any indigent sick person or persons who may die while under such care.

Said contractor to care for all the indigent sick properly admitted to the contractor's care. And said bids to designate the price per head at which all excess of patients over the average of four each day throughout the year will be cared for, said excess to be paid for by extra allowance on presentation of bills duly sworn to, at the regular meeting of said Board immediately after said contract has expired. The average four per day to be paid for at the regular meetings of the Board on presentation of bills duly verified. All payments to be made by warrants drawn upon the Hospital Fund of said county.

The person or persons to whom said contract shall be awarded shall give a good and sufficient bond in double the sum of the contract price, for the faithful performance of said contract.

The care and management of said indigent sick by such contractor shall be at all times subject to the inspection of said Board of Supervisors, or any member thereof, or any person appointed by the Board for such purpose.

Said proposals must be endorsed, "Proposals for Care of Indigent Sick," and the same will be opened between the hours of ten o'clock and twelve o'clock A. M., on the 4th day of Feb. 1891, and the Board reserves the right to reject any and all bids. JOHN N. YANDELL, Clerk.

We keep constantly on hand goods of all kinds needed in a country home. We order only First-Class Goods and ask no more than a reasonable profit. Give us a trial.

THOMAS & HILL.

A signal service to weak womankind is the finding of lost health—the building-up of "a run-down" system. Nothing does it so surely as Dr. Pierce's Favorite Prescription. It cures all the derangements, irregularities and weaknesses peculiar to the sex. It's the most perfect of strength-givers, imparting tone and vigor to the whole system. For overworked, debilitated teachers, milliners, seamstresses, "shop-girls," nursing mothers, and feeble women generally, it is the greatest earthly boon, being unequaled as an appetizing cordial and restorative tonic.

"Favorite Prescription" gives satisfaction in every case, or money paid for it is promptly refunded. That's the way it's sold; that's the way its makers prove their faith in it. Contains no alcohol to inebriate; no syrup or sugar to derange digestion; a legitimate *medicine*, not a *beverage*. Purely vegetable and perfectly harmless in any condition of the system. World's Dispensary Medical Association, Propr's, 663 Main St., Buffalo, N.Y.

When birthday's hour has come again,
When Yule tide's time we see,
I trust, O brave to have men,
That you' I remember me.

A man who has practiced medicine for 40 years ought to know salt from sugar; read what he says:

TOLEDO, O., JAN. 10, 1887.

Messrs. F. J. Cheney & Co.—Gentlemen:—I have been in the general practice of medicine for most 40 years, and would say that in all my practice and experience have never seen a preparation that I could prescribe with as much confidence of success as I can Hall's Catarrh Cure, manufactured by you. Have prescribed it a great many times and its effect is wonderful, and would say in conclusion that I have yet to find a case of Catarrh that it would not cure, if they would take it according to directions.

Yours truly,
L. L. GORSUCH, M. D.
Office, 215 Summit St.

We will give $100 for any case of Catarrh that can not be cured with Hall's Catarrh Cure. Taken internally.
F. J. CHENEY & CO., Props., Toledo, O.
Sold by Druggists, 75c.

He (who has just been accepted)—Do you believe in long engagements? Chicago Widow—No, I prefer short ones, and—(thoughtfully)—plenty of them.

You can't ask a conceited man a question so hard that it will not be easier for him to answer than to say, "I don't know."

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

We look in vain in works on ornithology for information about the stool pigeon.

The good reputation of "*Brown's Bronchial Troches*" for the relief of Coughs, Colds, and Throat Diseases has given them a favorable notoriety.

NOVEL DEATH FIGHTS.

Some Western Methods of Settling Disputes.

A DUEL IN THE COMSTOCK MINE.

Wrestling in a Gulch Filled with Rattlesnakes—Lariat Throwing.

The riata duel is not a new thing on the Mexican frontier. Indeed, there is hardly a big cattle range anywhere that has not its stories of hard fights with the lasso. Such duels are bound to be fierce.

But so skillful and quick do these rope throwers become that such a duel not unfrequently lasts for hours.

Probably the best remembered fight of this sort was that between a Texan, known as Kid Long, and a little Mexican who was only spoken of as "Gabilan"—hawk—on the great Lievre range. They circled around each other, dodging the rapid throws from 10 in the morning until after sunset. When the horses had almost given out the Texan threw at his adversary, who threw back so that his noose passed right over the other man's lasso and hand and caught him fair around the neck and under the armpit. In almost no time Kid was out of his saddle and being dragged over the ground at a rate that knocked the life out of him before he had gone a hundred yards.

The west, during its wild and woolly days, and the Mexican frontier have had many remarkable duels.

KING OF THE CAMP.

That between "Farmer" Peel and a soldier, near one of the forts in Utah, is among the classics of the field of honor—or what has answered for that in the cow towns and mining camp. The weapons were rifles, revolvers and bowie knives. The men principals were placed on opposite sides of a hillock, around which ran a road, and started to meet. The curve of the hill prevented their seeing one another until they were within a hundred yards. As soon as they saw one another both fired. Though part of the rim of Peel's hat was cut off, and the soldier's sleeve was pierced, neither was hurt. Then they pulled their pistols and advanced, firing. Both dropped badly wounded when less than twenty yards separated them. They lay there squirming and shooting until both had emptied their weapons. Peel was desperately hurt and his adversary had one ball through the stomach and several others distributed all over his anatomy. When they could shoot no more they lay for a short time swearing. Then Peel, who was so badly hurt that he could not advance even on his hands and knees, began to wriggle toward the fallen soldier. He pulled himself along with his elbows, and with his one uninjured hand finished the soldier with his bowie knife.

Farmer Peel already had the biggest private graveyard of any man in the vicinity. This encounter spread his fame all over the coast, and when he went over to Nevada he received everywhere the homage of lesser lights.

They have lots of deadly encounters up there on the Comstock. There was one a number of years ago fought over half a mile under ground. According to the evidence given at the inquest by the survivor, the two miners were working alone in a drift. They were rivals over the affections of a woman, and in a quarrel one made a drive at the other with his candlestick. A miner's candlestick consists of a metal socket attached to a sharp steel spike, so that it can be stuck in the face of the drift anywhere. The second miner defended himself with his candlestick, and there, thousands of feet under the ground, they wrestled and stabbed until one's life was gone. As they did not come up when they should have gone off shift others went down in search of them. They found one dead and the other unconscious through loss of blood. The jury, of course, had to take the survivor's story of the affair, and he was acquitted.

A strange duel was fought in a sparsely settled part of Sonora, Mexico, about fifteen years ago. Capt. Villenueva and a lieutenant of a battery of light artillery belonging to one of the posts had some trouble about who was the best shot with the mountain howitzers. They quarreled and agreed to settle it with the howitzers at 500 yards. They took neither seconds nor assistant gunners, but from the top of small hillocks they fired explosive shells at one another. The captain was wounded by a fragment of a shell, but they fired ten shots before either was disabled, though each was covered with dust. Finally the captain landed a shell fairly under his adversary's gun and the explosion so mangled the lieutenant that he died before they could remove him to the post.

A little blind canyon in the Sierra Madre used to furnish the Apaches with the means of formally settling their disputes. This gulch is fairly alive with rattlesnakes. When two bucks had a quarrel that they did not wish to settle off hand they repaired to this gulley, and while the remainder of the tribe stood around and watched from the hills on either side the combatants went together to where the serpents were thickest. There stark naked and weaponless they would wrestle. This would wake up every rattler in the glen. The aim of each was to force the other on to the angry snakes. It was not unusual for both to be bitten while they struggled and rolled around among the rocks. Each was bound to remain and wrestle as long as his adversary had life or strength enough to struggle with him.

A most remarkable duel was fought at Las Carnitas, N. M., many years ago. An under sized stranger came to the town and picked a quarrel with "Handsome Harry," a gambler renowned as a dead shot. They got out into the road and both fell mortally wounded. It was discovered that the stranger was a woman, and though she never spoke after she fell the story became known that she was a sister of a girl whom "Handsome Harry" had wronged years before.—San Francisco Examiner.

His Curiosity Satisfied.

That the daughters of Eve do not possess a monopoly of curiosity is pretty well sustained by a circumstance which recently occurred in this locality. Some boys were playing with a turtle, one of the snapping species, when one young lad thrust out his tongue to see whether it would bite. The turtle promptly carried out its part of the programme, it being found necessary to forcibly remove its hold from the lad's tongue, which was quite severely bitten.—Cor. Brockton Enterprise.

Not Half Warm Enough for Him.

"Warm?" he said, putting on a heavy pair of gloves and buttoning his light overcoat, "you don't call this warm weather, do you?"

"Do I call it warm?" said the other, mopping his brow and trying to fan himself at the same time, while his face grew redder and redder. "I call it gridiron heat."

"Pooh, pooh, my dear fellow; the mercury isn't above ninety-two."

"Ninety-two!"

"And it hasn't been above a hundred more than once this year."

"Shades of all the Icelanders!" cried the red, fat man, "what would you like to have it—135 in the shade? Would you like to boil eggs in the public fountains? Do you want foundries to run their furnaces without fire? One hundred! Do you want to sizzle and vanish in steam? One hundred!" he screamed in shrill, agonized tones, and he danced around madly in his wrath until his face was of flaming scarlet. "One hundred! Why, man, haven't you got any blood in your veins?"

"Oh, yes," said the other, shivering as a warm breeze touched him, "but I have 40,000 tons of ice cornered."

And then the little stout man fell in a swoon, and an ambulance carried him to the hospital, where he was recorded as suffering from prostration by heat, while the ice king went home to order the servants to put more coal on the fire.—New York Tribune.

Telegraphing in Africa.

That the conduct of a cable station is not always monotonous is shown by a letter recently received from an officer of the West African Telegraph company. This gentleman is in charge of the Kotonou station, in the territory of the notorious King of Dahomey. The king, it seems, had for some time been spoiling for a fight, and had at last become so ugly and aggressive that it was deemed advisable to arm the station, and have some soldiers handy. "Early one morning the station was surrounded by the natives," the superintendent writes, "and we were under the painful necessity of sending a few of them across the Styx. The station was for a time in imminent danger; Orsini and I fired more than 250 rounds each, and the thirty-five Senegalese sharpshooters who helped in the defense fired some 120 rounds apiece. An artillery sergeant who worked our two guns was killed, and the white gunners were so hard pressed that they had to club their rifles. This racket began at 4 in the morning.

"At 9 a. m. we left the soldiers still firing and went to the instruments, and you may imagine what a dance the mirror led us. By 10 o'clock, however, all was quiet in our neighborhood and the messages had all been sent through. I must not forget to tell you that we had to do with the famous Amazons. They were very fine creatures, fought like wild beasts, and were worth ten men."—New York Sun.

A Self Inflating Life Saving Belt.

In nautical circles a newly patented life saving belt is attracting much attention. This new apparatus clasps around the body at the waist line, and in its empty condition is easily carried. To this girdle is attached a little iron flask, which contains carbonic acid or carburetted hydrogen gas, the former mixed with from 10 to 20 per cent. of pure alcohol in order to prevent the chilling of the gases when filling the flask. The hollow space in the belt has a capacity of a little less than 100 English quarts. Two hundred grains of fluid carbonic acid gas and twenty grains of alcohol are required to fill it. When the belt is to be used a conveniently placed valve is opened and fills at once with light gases. According to scientific principles 100 liters of gas will displace the same amount of water; that is to say, will support in the water a weight corresponding to 100 quarts, or, in other words, about 200 pounds. Any human being equipped with the girdle has every prospect of success in a combat with the waves.—New York Journal.

Of Course She Regretted It.

On one of our suburban streets resides a lady who has a passionate fondness for plants and flowers, and many of these can be seen in the windows, which almost overhang the sidewalk. Sunday evening I happened to be strolling along the street in question, and noticed that the gentleman preceding me wore an almost supernaturally brilliant tile. As he passed Mrs. F——'s house one of the windows happened to be up and a present plant was dislodged. The flower pot was attracted by the shiny tile, and lit on it with a resounding thump, that sounds so funny when it's some other fellow's hat and so sad when it's your own. The gentleman under the crushed stovepipe ejaculated some words certainly not from the book under his arm, and passed on. Soon Mrs. F—— rushed out and said: "It's too bad—the only double geranium I had."—Bangor News.

Poison In Eels.

Eels contain as much poison as vipers, according to one studious Italian scientist. After careful investigation he finds that an eel weighing four pounds possesses enough venom to kill ten men. When the fish is cooked, however, the poison loses its power.—Chatter.

Not Her Size.

Customer from Seedville—Do you keep the best make of shoes here?

City Dealer—Yaas; our shoes are all A No. 1.

Customer from Seedville—Then you can't suit me. I take B No. 5.—Argosy.

Of Malleable Glass.

A writer in The St. Louis Globe is looking hopefully forward to the time when the walls, ceilings and floors of our dwellings will be of malleable glass as a period when approximate cleanliness will be possible.

Kaiser Frederick said in accepting honorary membership in the Academy of Legal Sciences at Madrid, "The first task of the legislator is to procure equal rights for all."

George Macdonald is and looks like a poet prophet of the old type translated into modern life.

SCENES IN CHINATOWN.

Youngsters Who are Fond of Slumming.

AN INTERESTING SCENE IN MOTT STREET

Cleanliness of the Orientals—Meals at a Restaurant.

There has grown up a fancy among the young people who are rather suffering for amusement to explore Chinatown, and they find much that is amusing beside the yellow skinned beauties. Sunday evening is the time chosen for this sort of slumming, as then the pigtailers congregate from far and near to buy supplies of Chinese food, which last them all the week in their Jersey City and Hoboken laundries. At that time Mott street and its vicinity present a pretty fair imitation of Hong Kong, despite the fact that trains are thundering by through the elevated network at Chatham square. The streets are almost impassable with the chattering crowds of Chinamen, each with a parcel under his arm, containing salt turnips, dried shrimp, tea and rice, which they have come to purchase for their seven days' supply. These Chinese eat comparatively little American food, and the Chinese groceries, of which there are thirty or forty, do a thriving trade, drawn from all the cities within easy distance, many of the grocers being worth anywhere from fifty to a hundred and fifty thousand dollars.

You will find their stock is nearly all imported; they keep very few American products, and you will wander among these jostling crowds for hours without hearing one word of English or suspecting that such a tongue was known were it not for the patent medicine advertisements, which carry the language everywhere, and are seen here in profusion, setting forth their merits in both tongues, and reaping, it is said, great store of shekels from the pigtailers, who dote on stuff of the sort and pay fortunes to their own nostrum sellers for the style of medicines which were in vogue in Europe in the middle ages. In every grocery hangs three or four pairs of antlers in the velvet, and the powder obtained by pounding a fragment of them in a mortar with a sliver of Chinese ginseng root makes a dose which would go on a silver quarter, costs anywhere from $40 to $75, and is taken once a year by any one who can afford it with the firm conviction that it has power to not only cure but ward off possible disease during the coming year.

The method of getting prescriptions is simple but somewhat haphazard. A Chinaman who feels that something is seriously wrong inside goes to the joss house, sets up two incense sticks in the incense burner, takes a small jar full of narrow bamboo slips in his hand, bows three times and begins to slowly shake the jar from side to side. In the course of a minute or two one of the slips works its way out from the others and falls on the floor. It has a number on it, and that number corresponds to a prescription to be found in a tattered and dingy "oracle book" hanging on the wall. The patient secures that prescription from his chemist, and takes it with full faith in the Joss' diagnosis and remedy. Nearly every man Jack of these Chinamen that the society people go down to gaze at curiously as they clatter through the narrow streets among the stands where salted peanuts and Chinese cabbage and cucumbers are sold, is a washerman.

There are 2,000 laundries in New York alone, 900 in your city and 200 in Jersey City, which is called in the Confucius "musquito land." Each laundry has from two to five men working in it, and most of them make money, for the Chinese exclusion bill keeps away competition and gives them a sort of laundry trust of it. One young woman, who has lately been on an expedition of this sort, when she acquired this piece of information saw in it the explanation of a fact that had greatly puzzled her—which was that every Chinaman she saw was clean. She had gone into little rooms crowded to the doors with Orientals, where the windows were shut and the gas burning, and yet there was not the smallest hint of unpleasant odor. She had explored opium dens and found every smoker with the snowiest stockings on his unslippered feet, and she came home much amazed having had some previous experience among the lower classes of other nations. Possibly the laundry profession being so widely diffused explains their cleanliness. They not only wash themselves, however, but the Melican man can go into their barber shops any evening and see the barber brush out and braid up their long queues, shave away all the hair around the face and neck, remove all traces of beard and manicure their nails, his customers coming out from his hands as fresh and clean as a yellow rose.

Of all the places in Chinatown the most interesting are the restaurants, of which there are eight. The Delmonico's is Hong Ping Lo's, where one can order a "spread" of forty courses, which it takes two days to eat and which can be had for the sum of $50, and provides enough for a party of six. Here's a meal for three at the Chinese Delmonico's and the prices. We had tea samsu (rice brandy), two kinds of wine, dish of chow chop suey, which is a pungent and palatable conception of chicken livers and gizzards, fungi, bamboo buds, bean sprouts, water chestnuts and all manner of savory spices stewed together; a dish of cuttlefish, one of ducks' breasts, chickens' wings, pigeons' wings, a bowl of rice and a mooncake by way of sweets, and for this, with all the attendant dishes of sauces and condiments, one pays $1.25. A full, square meal, deliciously cooked, dainty and delicate, for about forty cents apiece or less, because there was enough on the dishes to have fed three or four more people. This fact is becoming known, and over five hundred Americans are regular customers at the Celestial eating house. They do not want them there, either, because they are too cheap. They study matters closely, and manage to get their meals for about ten cents, while the Chinese, who are all high livers, spend their money freely.—New York Cor. Brooklyn Eagle.

CENSORSHIP OF THE PRESS.

Under the lottery law framed by Congress and the instructions given by the Postmaster General to his subordinates throughout the country, there is a serious danger of encroachments on the liberty of the press that should be rebuked and opposed by the newspapers of the country without regard to party lines.

These postmasters are instructed to act as censors and inspect all second-class matter, and whenever the postmaster finds, what he considers unlawful matter, or even suspects that articles are of that character, he is authorized to suppress the publication and refuse it passage through the mails.

This dangerous innovation is claimed under the specious pretext of suppressing lottery advertisements, and so far the public seems to acquiesce without a protest against this new assumption of power. If this step meets with popular favor then the next move will be to examine first-class matter, breaking the seals of letters in search of contraband publications or writings. If that be accomplised then we will rapidly forget the Louisiana State Lottery in the multitude of grounds upon which these postmasters can act as censors of press and people.—*Lexington* (Ky.) *Press*, Nov. 5.

A $2.50 PAPER FOR $1.75.

THE YOUTH'S COMPANION gives so much for the small amount that it costs it is no wonder it is taken already in nearly Half a Million Families. With its fine paper and beautiful illustrations, its Weekly Illustrated Supplements, and its Double Holiday Numbers, it seems as if the publishers could not do enough to please. By sending $1.75 now you may obtain it free to January, and for a full year from that date to January, 1892. Address, THE YOUTH'S COMPANION, Boston, Mass.

After one girl has given you the sack and another the mitten, it is time to give up trying to gain your suit on the installment plan.

SOMETHING FOR THE NEW YEAR.

The world renowned success of Hostetter's Stomach Bitters, and their continued popularity for over a third of a century as a stomachic, is scarcely more wonderful than the welcome that greets the annual appearance of Hostetter's Almanac. This valuable medical treatise is published by The Hostetter Company, Pittsburgh, Pa., under their own immediate supervision, employing 60 hands in that department. They are running about 11 months in the year on this work, and the issue of same for 1891 will be more than ten millions, printed in the English, German, French, Welsh, Norwegian, Swedish, Holland, Bohemian and Spanish languages. Refer to a copy of it for valuable and interesting reading concerning health, and numerous testimonials as to the efficacy of Hostetter's Stomach Bitters, amusement, varied information, astronomical calculations and chronological items, etc., which can be depended on for correctness. The Almanac for 1891 can be obtained free of cost, from druggists and general country dealers in all parts of the country.

He Went for Him—Did you go for the doctor? Stupid Servant (very muscular)—You bet I did, and sure he's a distressin' sight to behold.

PILES CAN BE CURED.

Richard Bennett, Westfield, N. Y., writes: "For thirty-two years I suffered from piles, both internal and external, with all their attendant agonies, and like many others suffered from hemorrhoids. All those thirty-two years I had to cramp myself to pay doctors and druggists for stuff that was doing me little or no good. Finally I was urged by one who had had the same complaint, but had been cured by BRANDRETH'S PILLS, to try his cure. I did so, and began to improve, and for the past two years I have had no inconvenience from that terrible ailment."

The most grateful man is the one for whom you have done the least.

Pure soap is white. Brown soaps are adulterated with rosin. Perfume is only put in to hide the presence of *put id fot*. Dobbins' Electric soap is *pure*, white, and unscented. Has been sold since 1843. Try it *now*.

Head and Tale—Spacer—What head did you put on your tick? Lever—None. It is a tie.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

CAMP LIFE.

The one thing you'll always find in every cowboy's outfit when he goes on the spring round-up is a "Fish Brand" Pommel Slicker. They make the only perfect saddle coat, and come either black or yellow. They protect the whole front of the rider's body, being made to fit round the outside of the saddle entire. When used as a walking coat, the extension pieces neatly overlap each other, making a regular overcoat with a double storm-proof front. When riding, the saddle is dry as a bone, from pommel to cantle, and the rider is entirely protected in every part of his body. These "Slickers," being of extra width, make fine blankets for camp. Beware of worthless imitations, every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER, - Boston, Mass.

A SINGULAR SOCIETY.

The "Shut Ins" Who Never see Each Other.

A UNIQUE SOCIETY OF INVALIDS.

They Exchange Letters and Photographs.

New York city is the headquarters of a society whose members and associates 1,800 in number are scattered over the five great divisions of the world It is an association scarcely known beyond the circle of its own members and their individual friends and acquaintances It is never mentioned in the newspapers It is governed by no laws or rules Yet there is nothing secret in its origin, aim or organization for it is organized It is not a charitable society though it does not despise donations and its members are willing to help each other to their full extent Its name will not be found in the directory list of organized associations in this city or in fact in any list whatsoever Its members never meet together never see each other never exchange handshakes or other greeting in propria persona It has no club house no rooms for social gatherings There is no annual dinner there are no periodic festivities or celebrations as with most societies The organization alluded to is an altogether unique affair

This remarkable sisterhood and brotherhood for it includes persons of both sexes as well as of all ages—is called the Shut In society Its members consist of men women and children who are 'shut in' by disease from the outside world of invalids who seldom or never leave their rooms or perhaps even their beds and who in some cases have remained for more than a generation in one never changing spot catching sight of life and nature only through the window

ORIGIN OF THE NAME

The name of the society was suggested by the words "And the Lord shut him in," from Genesis xvii 16, where reference is made to the Creator's inclosure of Noah inside the ark In a polyglot Bible the marginal texts imply that these words may be taken in an emblematic as well as a practical sense, and that when the former meaning is bestowed they signify a kindly and protective Providence It is in this sense in which the term "shut in" has been appropriated by the society The name was bestowed by Mrs J M D Conklin of Convent, N J, and the society itself originated in 1877 among the contributors to The Advocate of Guardian, the organ of the American Female Guardian society and Home for the Friendless in this city Some of these contributors secluded by sickness exchanged letters of sympathy and this formed the basis of an ever widening communion which existed for eight years in an unorganized condition The society was finally incorporated in August 1887 Its objects are mainly to relieve the weariness of the sick room by sending and receiving letters and tokens of remembrance and to testify to the consolation and help derived from religion To be a sufferer shut in from the outside world constitutes one a proper candidate for membership There are about 500 associate members who are not themselves invalids but who being in deep sympathy with chronic sufferers devote a considerable portion of time to their relief There is an advisory board of fifteen persons chosen from the society and selected from different parts of the country their duty being to confer personally or by letter concerning the interests of the association

THE SOCIETY MAGAZINE

Mrs Mary L. Dickinson is the editor of The Open Window the organ of the association a neat twenty page monthly magazine As a rule the reading matter betrays only an average order of intellect while at the same time it remains true that some of the members of this remarkable federation have minds that are as cultivated as their sensibilities are acute The vast majority are women The reason for this is that there are more chronic invalids among women than among men and that the gentler natures of women thus afflicted lead them to this sympathetic intercommunion whereby they form cherished ties with fellow sufferers whom they have never seen and never will see

Many of the shut ins are poor and support themselves One of them possessed of some literary ability has secured entrance into not less than twenty seven magazines and newspapers more than can be said of many talented professional writers in the enjoyment of health and strength Another who is compelled to be constantly on her back has executed some exquisite lace work but so slowly and with such difficulty that it is scarcely an exaggeration to claim that every stitch took an hour One member is an agent for magazines and journals a good many get up devotional and birthday boxes scrap books crazy quilts paper flowers paper boxes dolls clothes etc, occupy the time of some Interchange of photographs and letters is popular among invalids who read about each other in The Open Window It is stated that the existence of the Shut In society has a tonic effect upon its members They constitute a unique phalanx bound together by the tie of suffering the bondage of a room, yet sparsely spread all over the world From Sweden to the Sandwich Islands from the Netherlands to Syria in India, Burmah China and Japan the 'shut ins' are to be found as well as in the towns and cities of Great Britain and the United States

Invalid children who wish to join the association may do so In fact especial attention has recently been given to juvenile 'shut ins' between the ages of 5 and 12 a lady in Plainfield and one in Boston having them in particular charge A missionary society has likewise been started called the Invalids Bienlhary.—New York Herald.

The Amende Honorable.

"What! Hittie going to marry that old man Jones just for his money! What will poor Ted do, after having squandered his salary in taking her driving all summer?"

"Oh, that's all right, the livery man hasn't been paid yet, and Jones promised Ted last night to settle the bill himself."—Harper's Bazar.

India's Marriage Customs.

Marriage customs in India are to be reformed. The bride and groom hereafter must have attained the ages of 14 and 19 respectively. The families will not spend so much on festivities.—Chicago Globe.

The only way for a young man to get married comfortably on $500 a year is to throw himself on the generosity of his father-in-law.

Not Half Warm Enough for Him.

"Warm?" he said, putting on a heavy pair of gloves and buttoning his light overcoat, "you don't call this warm weather, do you?"

"Do I call it warm?" said the other, mopping his brow and trying to fan himself at the same time, while his face grew redder and redder. "I call it gridiron heat."

"Pooh, pooh, my dear fellow; the mercury isn't above ninety-two."

"Ninety-two!"

"And it hasn't been above a hundred more than once this year."

"Shades of all the Icelanders!" cried the red, fat man, "what would you like to have it—135 in the shade? Would you like to boil eggs in the public fountains? Do you want foundries to run their furnaces without fire? One hundred! Do you want to sizzle and vanish in steam? One hundred!" he screamed in shrill, agonized tones, and he danced around madly in his wrath until his face was of flaming scarlet. "One hundred! Why, man, haven't you got any blood in your veins?"

"Oh, yes," said the other, shivering as a warm breeze touched him, "but I have 40,000 tons of ice cornered."

And then the little stout man fell in a swoon, and an ambulance carried him to the hospital, where he was recorded as suffering from prostration by heat, while the ice king went home to order the servants to put more coal on the fire.—New York Tribune.

No Market for Cough Drops.

He hurried across the City Hall park and flew into the counting room of a morning newspaper in Park row. He was an old man, with long white hair and a snowy beard, and he wore a pair of huge arctics. Wandering up to a bookkeeper's window he extracted a small box from his pocket, and began in a high tenor voice:

"I have here, my dear sir, probably the greatest invention of the age. It is a cough drop. The only effective and useful cough drop ever placed before the American public. Upon feeling the well known first symptoms of a cold, you open the mouth, place a drop carefully upon the tongue and permit it to dissolve slowly. The cold then disappears."

"No more consumption is now possible sir," continued the venerable high tenor. "If you find yourself with a hectic flush and a hacking cough, place two of these drops upon the tongue, and immediate cure"——

"Are they good for anything else?" inquired the bookkeeper, peering through his window at the cough drop advocate.

"Well I should say so," said the latter, greatly encouraged. "It bowls over headache, sore throat and dyspepsia, and I am selling hundreds of boxes as Christmas"——

"See here, old man," interrupted the bookkeeper, "for your sake I deep y regret that I have not the preliminary symptoms of a cold. Moreover, consumption is unheard of in my family. My father died of curiosity and a buzz saw, and my mother still lingers at the age of 92. As for dyspepsia I could digest a carpet tack, and I don't know what Christmas means. You see old man, we don't seem to connect, so put up your pellets and amble along."

The cough drop dealer gathered up his boxes, settled his beaver firmly on his venerable brow, and said sadly, "Very sorry to disturb you sir; I didn't mean to hit the circulation liar."—New York Tribune.

Sometimes the Big Bill Dodge Fails.

The other day, as one of the conductors on a Worcester street car was taking his fares, a man sitting in one corner of the car complacently handed out a $20 bill. It was an old game; one that is often tried. The conductors are usually ready for such things, but this time change was short and the man of the patent register had just rung in a fare on himself when a drummer, standing on the rear platform, said: "I guess I can break that $20 for you." The face of the big bill man fell in a moment as the drummer handed over a lot of small bills to the conductor. His meanness was useless. He had to pay his fare.

"That's a slim game," said the drummer to another passenger, shortly afterward. "I never see it tried but I want to break it up, if possible. A short time ago I was riding on the cars, near Bridgeport, Conn., when I saw the conductor come up to a man who sat in front of me for his fare. The fellow handed him a $100 bill. His fare was thirty-six cents. The conductor was an old friend of mine. He came along to me and said: 'I guess I'm stuck, Frank.' 'Perhaps I can help you out,' I answered. I happened to have with me 131 silver dollars, and I counted out 100. If you ever saw a pleased man it was that conductor. He went back to the sharper, gave him sixty-four cents change, and then gave him ninety-nine cartwheels. The fellow swore and threatened, argued and pleaded; it was no use. The conductor had his fare and he had his change. It's a mean trick, and nothing pleases me better than to see it foiled."—Boston Herald.

Appointing a Time.

Creditor—When shall I call for the amount of my bill, Mr. Smith?

Debtor—Oh, at any time. What day will best suit your convenience?

Creditor—Well, I have less to do on Thursdays than any other day of the week.

Debtor—Very well. Then you may call for the amount every Thursday.—New York Sun.

A Little Rusty on Oxides.

Professor Flogg—I called, Mr. Grubb, to inquire about your son James. I haven't seen him at the academy lately. I hope you have not decided to keep him out of school.

Farmer Grubb—Well, I dunno. I've set Jimmie to blasting out stumps for awhile till he gets his bearings again I guess we can save him, but he was purty badly out o' plumb. Came home t'other night and commenced to talk to me about iron ox hides.—Chicago Times.

DANISH FARMERS.

Peasantry Divided Into Four Classes.

FEEDING AND LODGING THE LABORERS

The Law of Inheritance.—Keeping Poultry.

The peasantry of Demark are divided into four distinct classes, namely, the "Gaardmand" (pronounced Gorman), or yeoman farmer who either owns or rents from thirty to eighty five acres (English), secondly the "Parcelist," who owns or rents from eight to thirty acres, thirdly the "Husmand," or cottager, with from one to eight acres, and lastly the "Insidder" who generally rents his cottage and garden plot, and from this last class it is that the laboring men are principally drawn

Until marriage the laboring men are fed and lodged upon the farm where they work and in one of the buildings just referred to are the dormitories for the "Karle," o which upon such a farm there would be about twelve beside the foreman there too, is the roomy kitchen and the refectory where these stalwart hungry youths are fed and particularly well fed too, partaking of no less than five good meals a day At 6 in the morning their breakfast is served consisting of huge slices of bread and butter—cut by a machine—with coffee and a small glass of "snaps" or corn brandy on the island of Zealand this early meal is a kind of thick soup made of rye bread and beer with which a salt herring is eaten At noon dinner which is soup or porridge followed by meat, or codfish or pork with vegetables and beer at 4 p m bread and butter cheese beer and more snaps, and finally a supper of porridge with milk

The farm hands are hired by the half year and the whole system has hitherto worked to the mutual satisfaction of both laborer and employer This, however, is greatly due to the fact that there exists a code of hiring laws which provides an easy settlement of all disputes between master and man Every servant farm or domestic is under these laws compelled to keep a book which is officially registered and wherein are written all his or her certificates of character each one of which is necessarily countersigned by the magistrate of the district wherein the master or mistress resides

The Gaardmand's homestead is substantial, square and thatched, the barns stables, etc, are joined to it, forming together a quadrangular farm yard with the entrance gate facing the dwelling At the back is a garden, usually of about three quarters of an acre, devoted to fruit vegetables and hops, with a few roses and gilly flowers near the house door A farmer working from sixty to eighty acres will have upon his farm two "karles," a boy and two girls for the dairy, all of whom are helped in their work by their master and his family Generally such a farmer keeps upon his land fifteen or more cows four sheep four horses and two goats for every farmer is a horse breeder more or less The poultry is his wife's care and perquisite and forms a highly important item in her yearly budget These farms when owned by the yeoman are, generally speaking mortgaged for half their value a fact to be attributed in most instances to the repeal of the law of primogeniture

At present the parent is permitted, if he pleases to leave one third of his property to his eldest son a clause in the law of inheritance much appreciated and in general use As the valuation for probate is extremely low the eldest son generally raises a loan with which to buy out his brothers and sisters with their consent and the race being a practical one, endowed with generous instincts this modified form of "partage force does not appear as yet to produce the jealous feuds of to work the evil it is known to do in other countries though as indeed the system has not been long in force, it is perhaps rash to predict that it may effect no change for the worse during the lapse of a century In cases where a loan is impossible owing to a previous mortgage subdivision steps in and in some instances has been repeated until the minimum area has been reached under the new law already referred to Necessarily if the family be numerous and all elect to retain their share in the land they sink to the position of Husmand, and have to resort to a trade to eke out their livelihood Should however a younger member of the family have had the good luck to have married the child of a wealthy Gaardmand with a good dowry then the newly married pair proceed to buy a small farm of about twenty five acres, and become Parcelists

Class distinctions are clearly marked and rigidly adhered to among the peasantry Not so very long ago it was argued from certain political platforms in the Midlands that the farm laborer who possessed "three acres and a cow" would no longer have the need to touch his hat to the squire Judging from the Danish peasantry however, a race fully as sturdy and independent as our own, it would appear that an increase in the number of owners of land does but augment the number of those who demand a respectful salutation from the laborer, whether he possesses a cow or not

When the marriage of a Gaardmand's son with a Husmand's daughter occurs, all the peasant society of the district is put in a flutter and the match is considered a grave mesalliance not at all to be encouraged The younger sons of Gaardmand who have neither the prospect of a good inheritance nor of a good "match" usually learn a village trade, such as that of wheelwright or blacksmith those with a better education and more enlightened may become village schoolmasters and village "vets" and sometimes if they have a preference for horseflesh, they may take the post of coachman at the Herremand's though it is rare for the yeoman class to enter domestic service Those who do so like those who take to a trade lose caste and may freely choose their wives from the Husmand's daughters but not so the veterinary or schoolmaster for whom it would be unpardonable

Fowls are kept invariably They help to pay the rent and often more besides Upon the highway one meets the tiny child of 4 or 5 fair haired and blue eyed her mother in miniature as regards dress from the close fitting cap and large apron to the little sabots peeping out from under the long full petticoats She is armed with a switch and is there alone to guard the flock of poultry searching for a meal by the wayside, and which ever living on terms of close intimacy with the family are well conducted birds easily amenable to discipline In winter they are stowed away in all sorts of places, in the loft, or more often in hutches.—Fortnightly Review.

STORIES OF MEN.

Dr. Bryant's Joke Upon a Teller of Old Stories.

Dr. Bryant, who accompanied President Cleveland on his recent tour through the west and south, is a serious man, who never jokes and never uses slang. One day the doctor was walking through the woods on the Belle-Meade farm, near Nashville, with Gen. "Bill" Jackson, who is known far and wide as a very successful racconteur. The general was in particularly high spirits that day, and stories ran out of him like sap out of a sugar maple.

At the end of one especially good story the doctor, who did not seem to be much pricked by the point of it, continued to look up at the trees, which he had been some time examining, and said:

"General, you raise a good many chestnuts here, don't you?"

All the rest of the day the doctor wondered why Gen. Jackson told no more stories.—Chicago News.

Elihu Washburne, Sr. and Jr.

Elihu B. Washburne, Jr., who was called home by the death of his distinguished father from the college he had been attending at Kingston, N. Y., told this anecdote of him to a friend at the Coleman house, New York: The ex-minister was entirely lacking in appreciation of American humor. From the time he was rocked in the old oak cradle at Livermore he saw the sterner side of life, and failed with the most favorable surroundings to appreciate Yankee fun. Last summer Elihu, Jr., spent some weeks with his father at the old homestead in Maine. During the collegiate year the young man had not failed to draw on his father for funds. As the old gentleman was sitting and reading and meditating perhaps on the promeness of youth to make money fly upward, like the sparks, Elihu, Jr., passed by in the hall singing in a fine baritone:

The fifteen dollars
In my inside pocket,

whereat the elder lost no time in answering, in the same strain, but with a slightly sarcastic intonation:

Since when, Elihu,
Since when?

—Chicago Herald.

M. Quad Gets Into Trouble.

EUFAULA, Ala., Nov. 7.—While Mr. C. B. Lewis (M. Quad), of The Detroit Free Press, who has been on a visit for a week to this city, was sitting in front of the St. Julien hotel in conversation with a local newspaper man, they were approached by a stranger from the country, who asked:

"Which is M. Quad?"

"This is," Mr. Lewis answered, pointing with a smile to the local newspaper man.

"All right," said the stranger, addressing the Eufaulan, "I heerd you wuz in town, and I've walked fourteen miles ter day jist ter get er chance to lick yer."

It appears that the countryman had once written a communication to M. Quad, the plans and specifications of which the humorist criticised or made fun of, and so won the countryman's lasting enmity. After the affair the two scribes rescued their tall hats from the sand, and arm in arm they went up the street, while the countryman was recovered and detained long enough to be fined $4 and costs for assaut and battery. Mr. Lewis left this afternoon for Troy, Ala.—St. Louis Globe-Democrat.

Another Lincoln Anecdote.

Seymour Curtis is one of the characters of Stratford. He went to the war as 'lieut, and since has been what may be called an ardent, working Republican. He comes to Bridgeport nearly every day, and on his last visit told the following anecdote never before printed:

"During the presidential campaign of 1856, when John C. Fremont was the Republican nominee, Mr. Curtis, in company with James Booth, came to this city to hear Lincoln speak. As Lincoln stepped upon the platform to begin his speech Booth said to Curtis, 'What a homely man! He's the homeliest man I ever saw.' But as Lincoln talked and waxed eloquent, Booth brought his clenched fist down on Curtis's knee (and the latter said he hit hard) and said, 'Seymour Curtis, he is not so bad looking after all! He grows handsomer all the time.' At last, with a sledge hammer blow of his fist on Curtis's knee, Booth exclaimed, 'Curtis, he's the handsomest man I ever saw.'"—New York Tribune.

Why Bennett Came Home.

Tom Ochiltree's "latest" is at the expense of James Gordon Bennett. When told that the editor of The Herald had returned from Europe he evinced no surprise whatever, and murmured, "of course, of course," in the most matter of fact tone. "But why 'of course?'" demanded his informant, impatiently. "What do you know about it, anyhow?" "Nothing," was the witty Texan's rejoinder, "only—of course he's coming home to edit that new paper of his in Paris."—Chicago Herald.

Bishop Potter's Poser.

Bishop Potter is credited with the following joke: A young clergyman, not far from Harlem, being on the eve of marriage, and not wishing to trouble any of his clerical brethren, wrote to the bishop inquiring if, as he had already published the bans from his own pulpit, he could marry himself. The bishop at once capped the query with another: "Could you bury yourself?" That settled it.—New York Ledger.

Funnier Than It Seems.

The Princess Bismarck, speaking to a friend shortly after a man in Posen had left her husband about $500, said: "I'm so glad Bismarck got the money just at this time, when he needs a good, steady horse to ride. He always refused to buy one on the ground that he couldn't afford it. It comes in handy, doesn't it?" The prince, it will be remembered, has an income of $125,000 a year.

Dickens' Characteristic Reply.

An enterprising phrenologist once wrote a note to the late Charles Dickens, asking permission to make an examination of his cranium. Dickens replied: "Dear sir: At this time I require the use of my skull, but as soon as it shall be at leisure I will willingly place it at your disposal."—Manchester Guardian.

Tabor to the Rescue.

"It is a shame," said a patriotic Colorado man to Senator Tabor, "that we have no monuments to any of our great men in this state."

"So it is. I'll have my measure taken for one immediately," was the reply.—Chicago News.

A Career of Wealth Cut Short.

A Long Island man ate seventy-five clams at one sitting and won $100 by the feat. After defraying his funeral expenses there was $20 left. Twenty dollars a day, clear profit, is pretty good wages, and if the Long Island man had continued in the business ten years he might have been able to buy a couple of Patti tickets annually, besides having a couple of hundred dollars for inclement weather. His sudden death, just as he had entered upon a money making career, was rather unfortunate.—Drake's Travelers' Magazine.

ABOUT RATTLESNAKES.

By a Woodman Who Lives Among Them.

MARKET FOR SNAKE SKINS AND RATTLES.

Consumption Cured—A Popular Superstition.

"The splitting of a live chicken and applying the warm flesh to a rattlesnake bite, said a backwoods resident who lives almost within gunshot of a rattlesnake den on the Upper Shohola creek "is believed by nine out of ten of the old time dwellers among the mountains of northeastern Pennsylvania to be a never failing extractor of the venom of that reptile I have never known personally of a case of fatal poisoning by rattlesnake bites in human beings In fact, I cannot remember of a single person ever having been bitten within my knowledge and I live within ten minutes walk of a place where over 200 rattlesnakes were captured by one man in the spring of 1886, and where I can go any day and gather as many rattlers as a customer may desire Within the past five years there has arisen a craze among city people who spend the summer in the Pike county and other North Pennsylvania mountains for specimens of rattlesnake skins and rattles, and I have myself driven a profitable business in supplying hides and buttons for that purpose for three summers I know one summer boarding house keeper who buys these things on speculation to sell to his boarders I furnished him more than fifty big skins and as many sets of rattles last summer and have now a contract for 100 of the same this season I have known as much as $2 50 to be paid for one rattlesnake skin Some fanciers have the skins stuffed and mounted, and others have belts pocketbooks, card cases, cigar cases and even slippers made from the skins, after a careful process of tanning, by which the colors and luster of the skin are preserved as they are when the snake is alive and ready to sink his fangs in his aesthetic antlizer

"The person who caught the 200 rattlesnakes two years ago was Elijah Pelton, a big double listed woodman He kept them all alive without removing a fang and was the only person I ever really knew to handle live, fang whole rattlesnakes with impunity He did this daily nearly all summer at Shohola Glen before hundreds of New York people who visited that place, and I always thought the performance a singular one to be made an attraction of a summer sojourning place, especially as Pelton did not conceal the fact that the snakes were captured within an hour's journey of the resort He had the snakes in a large cage, which he entered and handled there at will, to the accompaniment of an almost deafening chorus of rattling from his vicious looking pets as they darted here and there about the cage or coiled themselves in the position they always assume when about to strike Pelton asserts that he was bitten time and time again but that he simply sucked out the poison, and did not stint himself as to whisky

"There was once another rattlesnake king in Pike county named Sam Helms He supplied himself with snakes from the same den that Pelton got his from and was never known to be without his bosom and pockets filled with them He died some years ago of consumption and his death from that disease shook the faith of the old mountaineers in the efficacy of the rattlesnake as a curative power

"The high value that is set on rattlesnake oil wherever that snake is found is widely known I have known as much as $5 to be paid for an ounce of rattlesnake oil, so great was the purchaser's faith in it as a cure for rheumatism and many believe that the oil is infallible as an internal remedy in all kinds of fever and in some places it is regarded as a never failing cure for fits It is on record that many years ago over in Sullivan county the settlers on the east branch of the Delaware got together one fall and killed over 1,200 rattlesnakes at their dens for the purpose of trying out the oil for bottling

"But the uses of the live rattlesnake as a medicinal agent are not so well known The father of one of my present neighbors suffered some years ago from an ulcer on his leg He did not seem to receive any benefit from rattlesnake oil, so he took the advice of an old resident, now dead and carried a live rattlesnake to bed with him and kept it there three days The old gentleman always insisted that he was bitten by the snake, and that the poison simply counteracted the poison of the disease that was in his blood and drove it out How true that may be I do not know but it is certain that the man's ulcer disappeared and he got well and lived for several years I don't know whether the snake died or not, but very likely it did

"Then there was and to some extent is yet a belief that if a consumptive should bite deep into the neck of a live rattlesnake at certain times the disease would be cured When it was found that Sam Helms had the consumption the live rattlesnake treatment was tried on him From all accounts he must have bitten the necks of a whole den of live rattlesnakes but consumption's hand was not stayed and Sam was gathered to his non snake biting fathers

"Another popular superstition among the old residenters and one that some of their descendants believe in yet, was to carry a set of rattles in their hats to prevent or cure headache and render sunstroke impossible It was also once believed that if a person bitten by a rattlesnake should swallow a few drops of the poison itself the former would have no effect Not a few woodsmen I have known always had a little vial of the poison which they extracted from the sacs at the base of the fangs of rattlesnakes they killed for their oil, to be used internally in case they should have the misfortune to be inoculated by a snake bite in their tramps through the woods But I never knew of any of them having occasion to use the alleged antidote, although if some of them are to be believed they have taken pints of the venom during their lives

"There used to be a man named Geer who lived near Long Eddy Sullivan county and who claimed to have an infallible cure for rattlesnake bites that his grandfather obtained from the Indians The composition of the cure was a secret but Geer would go any distance to doctor persons who were snake bitten He claimed to have saved the lives of many people suffering from rattlesnake poison Geer died a year or two ago, but the secret of the rattlesnake cure is still in his family It is a singular fact that none of the alleged antidotes for rattlesnake bites is effectual in case of poisoning by the copperhead or pilot.—Hawley (Pa.) Cor. New York Sun.

Visitors of Hospital Patients.

One of the very amusing though at the same time considerably annoying occurrences incident to charity hospital experiences is the daily arrival of all manner of indigestible food for the patients which is either sent in or brought to the hospital by interested friends and relatives The first thing a woman does when she comes to visit her husband son or lover" said a hospital surgeon on a recent occasion, "is to give him a bath

"A bath?"

"Yes a bath of tears She cries all over him don't you understand? And then she talks a lot of stuff regular mush you know and when she has him all stirred up pulse way up fever rising and everything in a fine condition she tries to make a finish of him by feeding him a lot of pie, cake, crullers or something of that kind We usually watch them and take the stuff away down to the office, but very often a woman conceals it under her apron and we find under the man's pillow after her departure an apple pie, a lot of custard cake fruit tobacco and even whisky Why a man was brought in here insensible the other day from a blow on the head dealt by the gentle hand of the new aqueduct elevator We had him propped up in bed with his head in an ice pack all tied up in a rubber bag, and his feet in a vapor bath Presently his wife, children sister brother in law and most of the rest of his relatives gathered in a line outside the doorway His wife insisted on going up stairs, of course and came flying down and said she was going right home to get him some breakfast that he hadn't had a mouthful to eat since early in the morning and she knew she could cook him something that would bring him round all right No wonder he was faint lying there all day with nothing to eat or drink."—New York Sun

Crickets in Algeria.

Accounts are published of the devastation caused by crickets in Algeria The insects resemble but are not identical with either locusts or grasshoppers Last year swarms of grasshoppers ravaged the colony This year the crickets have taken their place They spring like grasshoppers but have a more rapid and sustained flight They form clouds which shut out the light of the sun When they alight on the ground they destroy every trace of vegetation They sometimes fall exhausted on the ground in such numbers as to cover it with a layer of dead bodies from which pestilential exhalations arise The correspondent of a Paris newspaper in a letter from Algeria says that the railway trains have been stopped by the insects between Constantine and Batna

The method still employed to check the evil in the African possessions of France is the old and expensive one of digging long trenches at a right angle to the advancing swarms and placing on the most distant side a sort of fence formed by a web of cloth The advancing insects strike against the cloth, fall into the pit and are there covered with lime or mold The Algerian authorities have spent 700,000 francs in destroying them, and now contemplate a further expenditure of 1,000,000 francs to complete the work.—London Times

A Corset for the Fat Lady.

A clever little corsetiere on Seventeenth street says "The most difficult customer I have to fit is Barnum's fat lady She measures fifty inches round the waist, but laces down to forty four Her size is her stock in trade to be sure Yet, woman like, she will pull herself in For common wear I make her a plain article of strong jean at $25, for best, a satin embroidered corset at $75 You see I have to use about three times as much material and about three times as much whalebone, and the latter is costly as I do for an ordinary customer

"Yes, I have a customer in private life who is nearly as large She is a very rich and fashionable lady who lives on Fifth avenue, near Bryant Park She tells me that as a girl her belt measure was the same as that of the Empress of Austria and the Empress Eugenie just eighteen inches Now she is over 40, and cannot well make herself less, as one attempt at that for a charity ball brought on an attack of apoplexy No, I do not like to make corsets for overstout people They always want to squeeze themselves and be comfortable at the same time."—New York Press "Everyday Talk"

The Cost of Various Wars.

The following statistics are of French origin, and pointed Under Napoleon III the Crimean war cost France 200,000 men and 2 milliards of money England 23,000 men and 5 milliards of money Piedmont, 2,000 men and 175,000,000 francs of money, Russia 6,000,000 men and 4 milliards of money Turkey 35,000 men and 400,000,000 In 1858 the Italian war cost France 80,000 men and 1 milliard of money Italy 60,000 men and 150,000,000 Austria 120,000 men and 875,000,000 In the Mexican war France spent 500,000,000 money and 70,000 men The Syrian expedition cost 15,000 men and 125,000,000 money In the Franco German war France lost 225,000 men and 9,288,000,000 money And now France is bristling with Boulangism and will be compelled to go in with Russia ere long in a struggle more terrible than all before it The estimate is that France and Russia together can put in the field 9,500,000 of men, while Germany Austria and Italy can meet them with as many more Think of 20,000,000 men eager for each others' lives on European battle plains—and what has been the gain of it all.—Globe-Democrat.

A Difference in Dress.

It isn't always that a woman can afford to forego the quality of distinction in dress They are telling of a man who died lately and left as a widow a young woman who had formerly been his cook that he succumbed to her in consequence of her appreciation of this principle She was a good looking and intelligent girl, but he paid no attention to her so long as he saw her only in kitchen attire But she saved up two or three months wages invested the money in the handsome and becoming costume of a lady carefully arrayed herself in it for an ostensible trip to the city from the suburban home and then managed to show herself in that improved garb to her employer She was no longer a mere servant in calico She was transformed into a fine handsome lady in finery They were married within a month, and now she is a widow with a fortune.—New York Sun

I am myself so deaf that common conversation is inaudible to me when in a room where there is no other noise but when there is singing or instruments playing I can hear as well as any one and when on board of railroad cars in motion I have frequently heard conversation from the seat behind me that those on the seat with me could not hear I have known a number of people similarly affected I am 70 years of age, and have been deaf for more than fifty years

OLD TIME TUNES.

Old Songs and Their Local Associations.

THE ORIGIN OF "THE OLD OAKEN BUCKET"

"Life on the Ocean Wave" and Other Familiar Verses.

In a small and old fashioned but cozy chop house, way down town, two veritable Bohemians sat the other afternoon, and over their pipes exchanged recollections Their talk after a while touched upon old familiar songs, many of which possess peculiarly interesting local associations

"Now there's 'The Old Oaken Bucket,' said one of the Bohemians "that song had its birth up here in Duane street in 1817 Samuel Woodworth, a gifted but erratic printer, was living there at the time One hot summer's day he went into his house and drank a glass of water, remarking, 'that taste's good, but now I wish that I could drink just at this minute from the old oaken bucket on my father's farm' Woodworth's wife remarked sympathetically, 'What a poem could be written on that thought!' The printer pondered for a minute, and sitting down at the nearest table began to write Soon the touching verses beginning 'How dear to this heart are the scenes of my childhood' were written Soon afterward the words were coupled with a melody composed by Kiallmark for 'Araby's Daughter,' and were sung far and wide."

"'Woodman, Spare That Tree,' is another famous song, based on a local incident," said the second Bohemian. "The words were written by George P. Morris, who lived in New York almost all his life and died here in 1864. When he was a boy his home was on a farm not far from Bloomingdale. He was wont to play there under an old tree planted by his grandfather.

"Many years after he had left the farm and the property had passed out of the hands of his family he happened in that neighborhood one day, and saw a man about to cut down the old familiar tree. He begged the man to desist, and received the gruff response that the tree would bring $10 for firewood He gave the man the money and took a bond for the safe protection of the tree Soon afterward he wrote the noted song, which was set to music by Henry Russell."

"You have heard how 'A Life on the Ocean Wave' came to be written, I suppose?" queried the first speaker, as he moistened his lips. "No? Well, it was this way Epes Sargent was walking along the edge of the Battery one bright morning when the numerous craft, dancing on the glistening water, brought to his mind a suggestion made to him some time before by his friend, Henry Russell, that he write a marine song He wrote the words of 'A Life on the Ocean Wave,' and showed them to George P Morris, who remarked that they made a nice little poem, but they would not do for a song

Soon afterward Russell met Sargent and asked him for the verses. Taking them to a music store at Broadway and Park Place, Russell went into a little back room, seated himself at a piano and in a few minutes composed the air of the famous song. Sargent never received a cent for it, although the sales of the song were large.

"'Ben Bolt,' you remember, was a noted song along about 1850," continued the first Bohemian. "The original words of that song were written in 1842 by Dr. Thomas Dunn English, of Philadelphia, while on a visit to New York, and sent as a gratuitous contribution to a magazine edited by his friend N P Willis. Some years afteward the verses were repeated from memory to Nelson Kneass, a New York Bohemian, who set them to music, adapting an old German song. The instantaneous success of 'Ben Bolt' made it a source of great profit to its publishers, but Kneass died in poverty, complaining that he only received a trifle for his work So far as is known the writer of the original verses got nothing."

"But few writers of popular songs ever made any money out of them," oracularly remarked the second Bohemian. "There's the familiar case of John Howard Payne, a New York boy, who wrote 'Home, Sweet Home' while starving in an attic in Paris The song was to be sung in his opera, 'Clari, the Maid of Milan. Payne never got anything for it, and later in his life he wrote to a friend in this city: 'How often have I been in the heart of Paris, Berlin, London or some other city, and have heard persons singing or hand organs playing 'Home, Sweet Home' without having a shilling to buy myself the next meal or a place to lay my head.'"

"True, Payne's case was a pathetic one," assented Bohemian No. 1, "but there have been instances where song writers made a great deal of money and did not know how to keep it. Take the experience of Stephen Collins Foster, for example. He produced 'Old Kentucky Home,' 'Old Dog Tray,' 'Old Folks at Home,' 'Old Uncle Ned and scores of other popular songs for which he received large sums of money. It is a matter of record that more than 125,000 copies of 'Old Dog Tray' were sold in eighteen months Foster was a reckless, happy-go-lucky fellow Some of his most famous songs were written on brown wrapping paper in the back part of a downtown grocery in this city. He was taken sick here and was conveyed to a hospital, where he died penniless Jan. 18, 1864.

"Another man who received large sums of money for his songs was Henry C. Work, of this city, the author of 'Wake Nicodemus,' 'Marching Through Georgia and 'Grandfather's Clock.' The sales of the last mentioned song were enormous, and Work received $75,000 in royalties on that alone."—New York Times

County Official Paper.

An exchange say sthe number 13 is not unlucky if you put a mark before it, S. Brother Price would be of another mind if the words "please remit" were put after the mark.

Since W. M. Evarts is to be succeeded in ahe Senate by a Democrat, it is well that his successor is an able man. Political opponents of Governor Hill must in candor admit that he is the ablest man of the Democratic party in New York. His election to the Senate need not interfere with his candidacy for President, and he will be a much stronger candidate than Mr. Cleveland. No democratic newspaper will ever brand Mr. Hill as "a stuffed prophet."

Senator Stewart of Nevada has in charge a bill to reimburse the states of Oregon, California and Nevada for money expended in aid of the supression of the War of the Rebellion. The Senator has lately been acting with the Democrats in opposition to Republican measures, and now the Republicn Senators are very angry with him and threaten to defeat his bill. This they can easily do by uniting with the Democrats, who will always oppose any measure for the payment of claims for putting down the Rebellion. The loss to California by the defeat of the bill would be nearly two and a half millions of dollars.

It would have been a happy event for the State and an honor for the members if the Legislature had adjourned after the form was gone through of electing Senator Stanford. Since then the proceedings have been little else than a continual wrangle between two men to determine which shall be "leader" of the Republican party. "The evil that men do lives after them." Buckley showed how politics could be made to pay as well as levying assessments on mining stock or running a lottery, and now every small politician wants to be a Buckley and our Legislature is occupied with very little besides the struggles of two aspirants, each of whom thinks that he should be by merit raised to that bad eminence.

In the new states of Washington and South Dakota there appears to be a lack of competent politicians. In the Legislatures of both states members declare that they have been offered large bribes to vote for certain candidates for the United States Senate. Any of the older states could furnish politicians who would quickly teach the aspirants for Senatorial honors in Dakota and Washington how to offer bribes so deftly that members of the Legislature would not be put to the awkward necessity of publically declaring that attempts had been made upon their virtue. But a little practice will enable the young states to do that business as quietly and as often as their older sisters.

PUBLIC NOTICE

Is hereby given that unless the foregoing taxes and costs are paid I will on

TUESDAY, The 24th Day of February, 1891,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 30th day of January, A. D. 1891.

J. S. GORMAN,
Tax Collector of Inyo county, California.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, Cal.

NOTICE IS HEREBY GIVEN THAT AT A meeting of the Board of Directors, held the 16th day of December, 1890, an assessment (No. 11) of Ten Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, No. 132 California street, San Francisco, California. Any stock upon which this assessment shall remain unpaid on the 30th day of January 1891 will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on FRIDAY, the 20th day of February 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale. By order of the Board of Directors.

G. W. LUCE, Secretary.
Office, 135 California St., San Francisco, California.

Rev. H. J. Winsor will breach in Lone Pine at 11 a. m.; George Creek 2:30; Independence at 7 p. m. Sunday school at Lone Pine and Independence at 2 p. m.

Mr. T. J. Goodale was in town some days this week.

An interesting continued story will be found on the second page.

Walter Ober got back to Independence on Tuesday after an absence of several months.

John Anton and B. F. Grey came up from Keeler yesterday and stayed in town till this afternoon.

Doctor Bishop has tendered his resignation as Superintendent of the Asylum for the Insane of Nevada.

John Kelley, the well known mine superintendent of Bodie, is reported to be dying of consumption at San Francisco.

Mr. and Mrs. Frank Fitzgerald are in from Modock. They spent several days at Independence at the beginning of the week.

Last Friday the County Clerk issued a marriage license to Mr. Samuel C. Brown and Miss Clara Chamberlain, both of Bishop.

Robert Russell walloped a man named Burns at Bishop, and on Tuesday he was taken before a Justice of Peace and taxed $15 for the job.

At Tuscorora, Nevada, a large number of miners have been discharged. It is thought that most of the mines will employ greater forces in the spring.

Mr. Bolton, an attorney from San Francisco, has been at Independence during the week. He is attending to legal matters for the Sylvania Mining Company.

The Los Angeles *Herald* is cracking its cheeks whistling for rain, like sailors in a dead calm whistling for a breeze. This season so far is the dryest in many years.

At the soda works at Keeler nothing is doing at present beyond shipping the last crop of soda. The weather has been too windy the past week or two for work at the ponds.

Mrs. Partington took up a news paper yesterday and said, "Dear me, isn't that too bad! The death of Prince Badun causes great constipation of Belgium", and the old lady sighed deeply.

Remember the concert at the M. E. Church on Monday evening, Feb. 2nd., The following have kindly consented to help us: Mrs. Webb, Misses Mulholland, Craig, Stuarts, James and Mr. F. Densmore.

It is announced that Parnell has retired for a time from the leadership of the Irish party in Parliament. It would have been much better for his country and for his own honor if he had at once retired when the late scandals began.

The Lyon County *Times* says that the Piutes at Hawthorne, Nevada, were growing impudent and the Governor sent arms to the citizens there, so that if the Red Man becomes too demonstrative he can be effectually sat down upon.

Good reports come from Cerro Gordo. It is said that there are better prospects now than at any time since the present management took charge of the mines. One six horse team is kept busy hauling ore down from the hill to Keeler.

The authorities of Merced County have retained Hon. P. Reddy to prosecute August Olsen, accused of the murder of John Ivett. The murder was committed on the 9th of last November. Olsen is the brother of the wife of the murdered man.

Representatives of the Stevens Ditch Company and of the Salt Wells Valley Ditch company met at Independence Wednesday. Certain propositions were submitted by the former to the latter, but nothing definite was done. The propositions were sent for consideration to the Directors of the Salt Wells Valley Company at San Francisco.

The State of Nevada has seven hundred thousand dollars in the school fund. This is invested at a very low rate of interest. Francis G. Newlands suggests that this money should be loaned for the construction of irrigation works and argues that it would be amply secured and the benefit to the State would be immense. The people of Nevada will be very slow about letting the school fund be subjected to any risk.

Geooge Thorpe came down from the White Hill on Sunday. He says Pat Keys has a good vein of ore in sight and is adding to the pile in the dump every day, The ore is of the average good quality common to the Hill ledges. Wells Barnes is working on one of his claims. There is no ore body in sight, but the prospect is good for a speedy strike.

The Kern County *Californian* says that the trial of Elliott has been set for February 24th. The Superior Judge of Kern County was engaged in the prosecution of Elliott at two of the three trials already had, and consequently would not be competent to act as Judge at another trial of the same case. If another trial is had, some other Judge will have to try the case. Unless a request for a dismissal of the case should be made from Inyo County the trial would go on. Surely it ought now be clear enough that another trial would be useless.

The Rock Point mill near Dayton has not crusned any ore for a month past., the reason being that the Savage mine does not furnish ore enough to keep that and the Mexican mill running. The Lyon County *Times* says as soon as the mill stopped running the sulphurets and slimes were cleaned up in a hurry. Stockholders in the mine allege that fraud is and for a long time has been practiced by letting a large proportion of the gold and silver contained in the ore escape in the tailings. When it suits the mill men the tailings are worked over and the gold and silver are recovered and kept by them.

Death To The Fairs.

At this session of the Legislature it is proposed to make no appropriation for the District Fairs of the State, but to use the funds hitherto given from the state treasury for their support, in aid of the California exhibit at the big fair at Chicago. In every Assembly district in the state there is a fair district, and it would endanger the scalp of any Assemblyman to vote against the appropriation for his district. In every one of these fair districts there are "influential" citizens who have a keen interest in the appropriation, and no Assemblyman will want to incur the hostility of an "influential" citizen. Therefore they will vote against any proposition of the kind stated. But such a proposition should not be entertained anyway. These district fairs have done much good in the way of stimulating farmers and stock raisers to strive after improvements in every branch of their business. The money is distributed widely in small sums and to people who deserve it. Not one in many thousands of those who attend district fairs will see the big fair at Chicago, and whatever benefit comes to the state from that exhibit, those who are most interested in district fairs will be the last to profit by it. The first and greatest gainers will be the holders of great tracts of land, and there are enough of these in the state to subscribe among themselves every dollar of the sum required to make a grand exhibit at Chicago. To take the money that should go to the district fairs and give it to the Chicago exhibit would be robbing the poor for the benefit of the rich. This offers the strongest chance of the scheme being accomplished, however.

Wide Awake Bishop.

More solid improvement is being made in the neighborhood of Bishop than in all the rest of the county. Irrigating ditches are being extended in all directions, land is being fenced and brought under cultivation, and new buildings in various directions show that settlers are making homes there. In the south end of Owens Valley much is said about what *will* be done, but there no settlers are locating and very little improvement is going on. Very little has been said or published about Bishop, and not till a visit is made there and one travels about the country can one realize what improvements have been made recently. A great deal of good land, an abundance of water that can be cheaply conducted upon it, easy access to railroad, and last but not least, excellent schools,—these are the advantages that attract settlers. The country about Bishop has got a big start ahead of all other parts of the county and bids fair to keep it for many a day.

An Error.

On several occasions the Bridgeport *Chronicle-Union* has stated that the INYO INDEPENDENT was an advocate of the scheme for the annexation of California east of the Sierra Nevada mountains to the State of Nevada. Perhaps the Mono County paper has been honestly, even if stupidly, in error in making these statements, but a repitition now would be a lie outright. The INYO INDEPENDENT has never discussed the subject at all, well knowing that to do so would be a mere waste of words. There is not a citizen of this part of California who would vote in favor of annexation to Nevada, unless he were paid his price for doing so, and we believe there are few who would be so degraded as to sell themselves to the scheme for any price.

Here's Richness!

Archie McCormick, a prospector, came to Independence Wednesday with some very extraordinary gold ore. In fact, to call it ore does not fairly describe it. The stuff is about the size of walnuts, each piece being irregular in form and having many small cavities. These spaces appear to have been filled with iron rust or matter that resembles it. The rust or dust can be easily shaken out, and all the remainder of the mass is pure gold. Mr. McCormick sold about $500 worth of his gold at Bishop to get money for his immediate wants and came on to Independence with the balance. He refuses to tell where he found it but says it was outside Inyo County. He says there is a large vein of quartz in his mine with a seam about two inches wide containing this rich ore. It is highly improbable that a large body of ore of such amazing richness exists, but even a small pocket of such stuff would be a valuable find.

School Apportionment.

The County School Superintendent has made the following apportionment:

Bishop	$570 00
Big Pine	209 64
Fish Springs	190 00
Irving	190 00
Independence	199 82
Lone Pine	380 00
Milton	190 00
Round Valley	190 00
Station	190 00
Union	190 00
Warm Springs	190 00
	$2,689 46

Big Pine and Independence get extra on census over 70.

School Report.

Following is the report of the Independence public school for the fifth month, beginning December 22nd 1890 and ending January 23rd, 1891.

Whole number of days attendance, 636; whole number of days absence, 47; number of tardinesses 36. Total number of pupils enrolled, 46; average daily attendance, 34.526; percentage of attendance, 95 888.

The following named pupils were successful in passing their regular monthly examination, held January 23rd 1891.

Elsie Gill	92	Frank Sherrer	90
Lavina Partridge	96	Cora Craig	77
Effie Roeper	84	Arthur Robinson	77
Charles Rose	76	Lester Laird	77

NOTICE OF SALE OF REAL ESTATE AT PUBLIC AUCTION.

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Superior Court of the County of Inyo, state of California, made on the 29th day of January, 1891, in the matter of the Estate of Charles D. Begole, deceased, the undersigned, the Administrator of the said Estate, will sell at public auction to the highest bidder, for cash, gold coin of the United States, and subject to confirmation by said Superior Court, on Saturday the 21st day of February, 1891, at 12 o'clock m., at the late residence of the said deceased, in the town of Lone Pine, County of Inyo, State of California, all the right, title, interest and estate of the said Charles D. Begole at the time of his death, and all the right, title and interest which the said estate has, by operation of law or otherwise, acquired other than, or in addition to, that of the said Charles D. Begole at the time of his death, in and to the following described real estate situate, lying and being in the said County of Inyo, State of California, bounded and described as follows, to wit:

Lots in the town of Lone Pine, County of Inyo, state of California: Lots Nos. one and four in Block no. six. North half of No. 6, No. 2 and 3 in Block No. thirteen. Lots Nos. two, three and seven in Block No. twenty-six. Lots Nos. six and seven in Block No. twenty-five. Lots Nos. five and eight in Block No. twenty-three. Fractional part of lot No. one, fractional part of lot No. seven and fractional part of lot No. eight in Block No. one. Block No. twenty-seven. Block No. twenty-eight. Block No. three. Block No. eight. Lots Nos. five in Block No. three and lot No. six in Block No. eight.

Also the following described real estate situate in the County of Inyo, State of California.

The East half of the South-west quarter and the West half of the South-east quarter of Section No. twenty-one, in Township No. fifteen, South, of Range No. thirty six, East, M. D. M. Also an undivided one-half interest in and to the following described lands, beginning at a point twenty chains East of the North-west Section corner of Section No. twent-eight, in Township No. fifteen, South, of Range No. thirty-six, East, M. D. M., (mag. va. fifteen degrees and fifteen minutes East), thence south thirteen and ninety-one one-hundredths chains to North-west corner of J. G. Dodge's land; thence North, sixty-eight degrees and twenty minutes East, twenty two and thirty-one one-hundredths chains to Brewery street in the town of Lone Pine; thence North, twenty-one degrees and forty minutes West, twenty-one one hundredths chains; thence south, sixty-eight degrees and twenty minutes West, eight and ten one-hundredths chains; thence North eight and forty-eight one-hundredths chains to North line of Section No. twenty-eight; thence West thirteen and twenty-one one-hundredths chains following the line of said Section to the place of beginning. Containing fifteen and one-half acres.

Terms and conditions of sale: Cash, gold coin of the United States, ten percent. of the purchase money to be paid to the Auctioneer on the day of sale, balance on confirmation of sale by said Superior Court. Deed at expense of purchaser.

THOMAS PARKER.
Administrator of the estate of Charles D. Begole, deceased.
Independence, Cal., January 29th, 1891.

"Well! Well!"

That's the way you feel after one or two of Dr. Pierce's Pleasant Pellets have done their work. You feel well, instead of bilious and constipated; your sick headache, dizziness and indigestion are gone. It's done mildly and easily, too. You don't have to feel worse before you feel better. That is the trouble with the huge, old-fashioned pill. These are small, sugar-coated, easiest to take. One little Pellet's a laxative, three to four are cathartic. They regulate and cleanse the liver, stomach and bowels—quickly, but thoroughly. They're the *cheapest* pill, sold by druggists, because you only pay for *the good* you get. They're *guaranteed* to give satisfaction, every time, or your money is returned. That's the *peculiar* plan all Dr. Pierce's medicines are sold on.

Can you ask more?

GOOD NEWS FOR THE AFFLICTED.

A Remarkable Cure of Rheumatism and Catarrh.

Baldwinsville, N. Y.

Pardee Medicine Co.

GENTLEMEN:—About one year ago I chilled my blood and was under the Doctor's care for about six months when I had a counsel of eight *physicians* and was given up to die. Soon after, a lady friend came to see me and told me about *your great Remedy*. She said she had been cured by it after having the rheumatism *seven years*, and that her rheumatism was first brought on by a cold. At this time I was suffering severe pain all through my body and near my heart. The doctors called it only "frozen blood." Through the persuasion of my friend I procured a bottle. I found some relief. Seeing this I procured more and was entirely cured by its use; and what was my surprise and pleasure at finding that I was not only cured of my rheumatism, but the catarrh, which had been troubling me for years and had become very offensive, had entirely left me.

Wishing your remedy every success, and thanking you very much for my double cure, I remain,

Truly yours,
MRS. LUCY BRONSON.

Reduced to a Skeleton by disease, and Restored to Health with Dr. Pardee's Remedy.

Wilson, Niagara Co., N. Y.

GENTLEMEN:—In April, 1883, I was prostrated by a severe attack of inflammatory rheumatism and was confined to my bed four months. I was attended by the best medical skill, but rapidly grew *worse* until I was reduced to a *mere* skeleton.

The disease had gone to my lungs and to the region of my heart and I was finally given up by the physicians, who said I could live but a few hours at most and that all they could do was to make me as easy as possible by killing the pain by frequent injections of morphine. I was finally advised by a friend to take Dr. Pardee's Rheumatic Remedy. Upon being asked as to giving it to me, the physician said "I have no faith in patent medicines, but give it to him; it will not hurt him."

I was then so near dead that my limbs were cold below the knees, and a numb sensation began to creep over my body, and I suffered with great pain in my chest and about my heart. After I had taken the first few doses I experienced more pain than before, for it seemed to drive the pain from the vital parts toward the extremities. I continued to take it according to directions. Four days after the physician who gave me up called to see me, and said I was much better. In about four weeks I could sit up; I then gained very fast and became as well as ever. CHAS. O. BARNUM.

Brother of D. C. Barnum, Attorney, 126 Powers' Block, Rochester, to whom persons can refer.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price, $1 per bottle; six bottles, $5.

Pardee Medicine Co., Rochester, N. Y.

Rochester, N. Y.

GENTS:—I was confined to my bed with Inflammatory Rheumatism for over a week; was very badly afflicted, suffering from severe pains in my chest, it was going to my heart. On Thursday the 15th I commenced using Dr. Pardee's Rheumatic Remedy at 9 o'clock, P. M., and on Saturday the 17th, was able to walk all over the house, and have since continued to improve, and take pleasure in recommending it to all who are afflicted with the terrible disease.

THE JEWS OF MOROCCO.

A Most Interesting Race of People.

DESPISED AND DEGRADED BY THE MOOR

The Terrible Punishment Inflicted on the Hebrews.

The Jews of Morocco are to my mind at once the most interesting and the most trying race of people I ever met. Subject to restrictions in their life and business which would exterminate an ordinary race of people in two generations they have grown prospered and in many places are masters of their masters.

No one knows just where the Moorish Jews came from but of course they have been connected with the lost tribes and all that. The main facts are they are in Morocco without knowing themselves just how they got there. Among the anomalies connected with them is that they are hated and despised by the Moors subject to every insult and degradation that can be imagined yet they are recognized as such necessary members of society that there is a law which is actively enforced forbidding Jews to leave the country under any circumstances. The Jews outside of one or two coast towns are treated worse than the meanest and lowest animals and, whether in the way of retaliation or the means which in the first place secured them this brutal treatment I am not competent to say they in return treat the Moors with fairly devilish cruelty when they get them in their power, as they often do through money transactions, for as in other lands, the superior cunning of the Jews makes them the bankers of the country and with a debtors law which allows the imprisonment of a man until his debt is discharged there are ample opportunities for the Jews to act as fiends incarnate.

KILLING A JEW.

In return for this a Moor thinks no more of killing a Jew if he can do it quietly than of killing a rat, and as for dishonoring the family of a Jew it is looked upon as the natural course of events and truth compels me to say that the husband and father looks on the transaction with a fair degree of complacency provided always it helps along some end he has in view. The Jews are not allowed to carry arms of any kind, nor to ride upon a horse, mule, donkey or bullock but must make all journeys on foot neither are they allowed to wear any foot covering outside of their own quarter where they are herded together like animals, their dress being regulated and restricted so they may always be known from the believers at a glance and they are forbidden to build any places of worship or to hold religious services of any kind which command is religiously disregarded services being held regularly in their houses, with in some cities, a guard posted to inform of the approach of strangers. If there is any nasty work to be done, as for instance the embalming of the heads of executed rebels so that they may hang the longer at the traitor's gate the Jews are pressed into the service. If the sultan or one of his officers wishes a few thousand dollars to meet a sudden demand some wealthy Jew who has paid the least for protection is seized without notice and thrown into a dungeon until he has been squeezed out of a proper sum.

If a Jew meets a Moor no matter how low the position of the latter he is obliged to step barefooted into the filth of the middle of the street so as not to touch the garments of a follower of the prophet and he is not allowed under any circumstances to enter the street upon which a mosque is situated. The punishment for the disregard of any of these laws is simply terrific, ranging from burning to death to bastinadoing.

THE BATH UNKNOWN.

The use of the bath either for the face or the body is totally unknown among the Jews, except the hand bath before eating at other times the face being simply rubbed with a dry cloth when it becomes unpresentable. The Jews of Morocco look upon themselves as a persecuted race but from my own observations I think I had rather be a Jew than a Moor as far as persecution is concerned, for his deadly hatred of the Moor, coupled with his own superior cunning gives him in the course of his lifetime a chance to return oppression for oppression and to my certain knowledge the dungeons of Morocco are filled with Moors rotting to death in payment of debts owed to this same persecuted race.

Of the Jews' quarter in Alcazar much cannot be said, except that it is something dirtier than the rest of the city and the inhabitants decidedly hospitable. For some reason all white skinned people are looked upon by the Jews as their friends, consequently there is no limit to a Jew's hospitality, or to his requests for political favors after you have received it. As the most interesting event that could be shown, it was at once suggested that I attend a Jewish wedding then taking place, and while I feared to offend the proprieties by coming into the presence of the timid bride in top boots and a flannel shirt, Jacob insisted that she would not mind if I had no boots at all on, or wore them around my neck. I was a little afraid we would arrive late until I learned that it was the playful custom of the Jews to keep the poor bridegroom in suspense by stringing the ceremony out for a week, and that this wedding had already reached its third day.—Morocco Cor Boston Transcript.

Forks a Modern Invention.

It is difficult to realize what a modern invention the table fork is. Queen Elizabeth never heard of one. She had it is true a few dainty forks, perchance with crystal handles, for eating preserved fruit at dessert. But long after her time dinner forks were unknown in England. The very earliest now to be found belong to the same nobleman whose hour glass salt has been already spoken of, and these are not older than the middle of the reign of Charles II. The few early forks of the reign of George I are three pronged, but few of our neighbors can show us four pronged forks much before the reign of George III, from which time their fashion has remained unaltered to the present day except for their handles, which have followed the fashions of spoons finishing up with the familiar "fiddle pattern" of Nineteenth century use.

Before the days of forks the ewer and basin, which have now generally disappeared were much in request after every course whereas now the basin alone, with a little rose water, makes its appearance at civic feasts after dinner, as a matter of fashion rather than necessity. Four out of five fine old basins have no doubt been melted up to supply the very forks whose invention rendered the washing of the fingers superfluous.—Mrs. Merry's

Charity of the Jews.

Every Jewish association, whether a club, or debating society, a musical party, a mutual insurance fraternity, a business league, or what not else, is by those concerned in it deemed incomplete if it does not do something for charity. At every wedding merrymaking festival and memorial celebration public or private and even in the house of death, the box for voluntary offerings to some charity is conspicuous. And when public calls are made in the synagogues for contributions in aid of a charity, the responses are such as are evoked nowhere else.—New York Sun.

The Interest in Athletics.

The universal interest in all these trials of strength and dexterity and quickness is a feature of the time. The derided baseball crank finds himself numbered by thousands. In spite of all the mockery leveled at him, in spite of hippodroming and possible unfairness in results, in spite of the fact that players are but somebody's "hired men" and local enthusiasm a farce the grand stand and the bleaching boards scarcely contain the multitudes who gather to see the fun. Lawn tennis, an importation of comparatively few years ago, is now in national repute. Lacrosse holds its own and cricket is overcoming the objection to it as a strictly English pastime which refuses to be naturalized elsewhere. Our great races are few and our prize winners have no "grand prix" to fight for. But our breeds of running and trotting horses are improving steadily and a larger constituency looks day after day with keen interest, for the record of the judges. Every form of outdoor sport has come into distinctly greater favor and although some of this enthusiasm will undoubtedly effervesce, it will leave permanent traces upon our life and modes of thought and habit of enjoyment.

The result of the progress of what, for want of a better term, we designate interest in athletics, will prove, we doubt not, highly beneficial. All these things have their flood tide and their ebb. The history of intercollegiate contests epitomizes theirs. The first college contests at bat and oar were simple and friendly rivalries. With the awakening of youthful ambition and determination to win they were carried beyond the point of wisdom or safety. Too much of value was subordinated to their requirements, and college authorities felt themselves obliged to interfere with the single devotion to athletics that threatened physical as well as mental injury. Restrained within reasonable limits, the intercollegiate games and races will continue to play a part scarcely inferior in their way to the discipline of ordinary college work. So the furore over general sports and amusements which now possesses the public will pass away, as it ought.—St. Paul Pioneer Press.

Superstition of an Author.

Howard Seely, the Texan writer who has been attracting attention for several years past by his clever sketches and stories of frontier life, and whose recent novel, "A Nymph of the West," received favorable comment, has some curious superstitions about literary composition and is unique in his methods of work. The most unique feature of his study is a human skull and femora surmounting a bookcase. The thigh bones are those of a man, but the skull is a woman's, said to have formerly appertained to a Mexican senorita of great beauty. There is some mystery about this relic, for the author is reticent about talking of it.

The brain cavity is lined with black velvet, and the top of the skull opens with a hinge, for this ghastly box is a receptacle for pens and the names of his heroines inscribed upon bits of ivory. It is his custom when the name of a heroine has been selected, and her character and physical attractions are in process of development, to put this title in the head of the skull and let it remain there until the story is finished. The eyes of the skull are provided with silver fonts to contain ink—the left red and the right black. When in the throes of composition this skull is used, and his fiction may, therefore, be said to emanate from the left eye, and consequently from the right hemisphere of the skull of the Mexican senorita.—New York Graphic.

Beauty of the Coffee Plant.

Nothing can be more beautiful and interesting than studies of the annual blooming budding growth and ripening of coffee and its gathering and preparation for the market. The leaves which are ovate in form are about four inches long. They set opposite each other in pairs and are dark green in color. Similar in texture to the mammee leaf they have the waxen surface of the Indian laurel. The foliage is perennial. Shooting out from the axes of these pairs of leaves, after the manner of our cherry blooms are seen the coffee blossoms almost precisely like a diminutive tuberose in clusters of three to six, snow white and with an indescribably delicate subtle and delicious odor. For two months in spring time a coffee plantation is simply one vast plain of white, a region of intoxicating odor, with the blue sky half shut from sight by myriads of honey seeking butterflies, humming birds and brilliant winged songsters fluttering and circling in apparent ecstacy of revelry and delight. For nearly six months new blossoms come as the old ones disappear. Blossom and ripening berries are continuous. As the breezes snow the dying blossoms upon the ground, tiny green buttons take their place. They change to a pale pink then to a bright cherry, finally to a reddish purple. Then they are ripe and ready for gathering.—Edgar L. Wakeman's Cuba Letter.

Reconstructing the Bastile.

The Parisians have just been treated to the spectacle of the restoration of a whole quarter of the old Paris of a century ago—the quarter out of which the revolution and the new ideas which govern modern France sprang, the quarter of the Faubourg St. Antoine and that sombre fortress and last stronghold of French absolute monarchy—the Bastile. This is part of an elaborate series of reconstructions which will be one of the features of the great exhibition of 1889, it being proposed to construct on both sides of the Seine from a point nearly opposite the Palais de l'Industrie and extending all the way down to the Champs de Mars and the Trocadero, sections of old Paris as well as specimens of the architecture, palatial and private, of different nations. The main entrance to the exhibition is expected to be on the Champs Elysees through the great doors of the Palais de l'Industrie—a joyful announcement to the foreigners with memories of previous exhibitions, waiting for cabs and horse cars. The present exhibition of the Bastile and the Faubourg St. Antoine was doubtless suggested by the success which attended the great London exhibition at Kensington during the two exhibitions of last year and the previous year.—New York Evening Post.

The Tender First Locomotive.

The abolishment of the tender first locomotive is needed. Neither man nor beast has half a chance for life when hit by the perpendicular wall of the "tender." The victim is simply struck down where he stands and ground by the cruel wheels. Struck by the sloping bars of the "pilot" he may get off with a broken leg or arm or fractured ribs—but at least he is thrown out of the way of the modern Juggernaut, and does not have to be gathered up in buckets and shovels.—Pittsburg Bulletin.

Coast Trading in South America.

A system of "deck trading" is carried on by the people of the country all along the west coast. Men and women come on board the steamer with fruits, market produce and other articles, which are strewn about the deck and sold to people who visit the vessel at each port. These traders are charged passage money and freight by the steamship companies and are a nuisance to the other passengers. Each female trader brings a mattress to sleep upon, a chair to use during the day, her own cooking and chamber utensils, and spends a great part of her life sailing from one port to another.—William Eleroy Curtis in American Magazine.

CHINESE FOOD AT SEA.

Cost of Feeding Celestials on a Steamer.

A QUARRELSOME SET OF PASSENGERS.

A Crowd of Pagans Leaving for Cathay.

The Oceanic Steamship company's office was crowded the other forenoon by Chinamen anxious to avail themselves of the reduced rate of passage by the Canadian Pacific steamship Abyssinia. Twenty-five and forty took passage by her and sailed about 12 o'clock. Many held off to the last minute in the hope that better terms might be made, but the agents were inexorable.

"Don't you fumigate the office after the China steamer leaves?" asked a Hawaiian dude who struggled to the counter through the jabbering crowd of Chinamen to secure a passage to Honolulu by the Australia.

"What ails you?" was the retort. "You should be familiar with the essence of Cathay as you come from Honolulu."

"Of course I am, but nothing so rank as this."

"Good money all the same. There are no deadheads in the Chinese passenger trade, no round trip complimentary tickets. Everything is on a basis of United States gold coin and no credit."

CHINESE SEA LAWYERS.

Happening along at lunch, the lead thus opened was followed. "See the Abyssinia lot of Chinese?" asked the dispenser of hospitality at a neighboring lunch bar. "Seem a queer lot. Give a great deal of trouble most likely. That kind always do. There are cripples and broken down men of all kinds among them."

"Have you had experience in that trade?"

"Yes, for years. I have been employed in the Chinese trade quite a long time but I have quit the sea. These fellows will have an armory with them. They are quarrelsome and dangerous, and they are always sea lawyers aboard to stir up trouble. They tell the ignorant coolies their rights, and if we were not prepared to fight at the drop of a hat it would be all up with us and the ship. We generally manage to keep them under."

"What is the rate of passage?" asked a reporter who happened to be present.

"Twenty-five dollars and whatever we can get for freight."

"Are you in for a freight war?"

"Can't tell. Know only what we are doing."

"Does $25 passage money pay the Canadian Pacific on a thirty day voyage when the old lines could barely manage to get along with a $50 rate?"

"I should smile. But you just skirmish around and find out."

"What does it cost to feed Chinese passengers?"

"I brought over 1,500 of them one trip at an average cost of four and three-eighths cents a day per man. Yes, it was a little pinched but they had enough. Up to 3.60 a fair average of the cost is ten cents per head daily, above that the average lowers. I think the Pacific Mail figures on twelve cents, but that depends on circumstances."

"What kind of food do they get?"

"Chiefly rice. We take twenty-six different kinds of chows. We take white beans, brown beans, black beans, red beans, green beans—every kind of beans, orange peel, sauces, dried shrimps, dried fish, dried abalone, although they get little of that. But the principal diet is rice. Five pounds of fresh beef will go as far with 100 Chinamen as with five whitemen. They take a big mess of rice and a small piece of fresh meat which they lift with a small morsel and return to the dish. Then they pitch into the rice with their chopsticks and sample the sauces. They are fond of salt pork and salt meat. Fresh meat goes further. They should never get salted meat or pork."

MUST EAT OR STARVE.

"Have you ever had trouble with Chinese passengers?"

"Often. I remember once in the Peking we had a thousand of them and they kicked about their food. I went down to find out what the trouble was, and then brought down the chief officer. The rice was not cooked to their liking.

"I will give you ten minutes to begin eating, said the chief officer, after that the rice will be thrown overboard.

"We could not move. We were surrounded. Time's up, said I calling my boys to clear away. Over she goes. The Chinamen looked sulky for a minute or so and then sat down and ate the rice, and that was the last of it.

"We never have any trouble coming this way until after we leave Yokohama. Up to that time the coolie is busy filling up, and by the time he reaches Yokohama he is all swollen out with rice, cutting a very ridiculous figure with his spindle legs and overhanging stomach. After leaving Japan he is in good condition and listens to the incendiary talk of the Chinese high binder. If we backed down or weakened in any way it would be all up with us. Chinamen are a hard crowd to handle on shipboard."

"You have only to give the Chinamen plenty to eat and you have no trouble, said an attentive listener. "I was in Hong Kong when the Abyssinia came in three trips ago and she had trouble about the food. She then sailed from Victoria. The other vessels seldom have any bother of that kind."

"You think that ten cents per day covers the cost of the food supplied on shipboard to each Chinese passenger?"

"Yes, I do. It costs less with care when the numbers are large than when there are few on board. There is very little waste. I assure you it is not a losing trade at $25 per head."—San Francisco Examiner.

Words One May Not Use.

The Americans are accused of a profusion of epithets, of an ill expressed approbation. No one should say of a picture that it is "perfectly sweet." Sweetness (in spite of Matthew Arnold) is a word meant to express a sensation of the palate. Still less should we say of anything we enjoy at table, "I love it," "I love melons," "I love peaches," "I love grapes," all these are schoolgirl mistakes, we love our friends and our country. Love is an emotion of the heart, and not a tickling of the palate, we may like and prefer melons, but we do not love them. All the senses have their appropriate language, some of them can be equally expressed by the same words. There are minor elegancies also to be observed in the words "take" and "eat." We do not say now "I take tea with Mrs. Montgomery, but "I drink tea." Beau Brummel once rebuked a lady for saying "Take a dish of tea." He said "Madam, a vulgar man can take liberties, but a gentleman drinks tea."

The English, however, who are very particular as to these minor rules, are very coarse in some of their expressions. They says such a persor is a "horrid, nasty little pet," and "you stupid old darling" is a familiar term of endearment. They use many terms which we need not adopt. The use of the word "nasty" as a term of endearment and praise is a very false fashion. When our English friends use the word "nasty" as describing their own climate we can quite agree with them but when they pervert it they outrage decency.—Mrs. M. E. W. Sherwood.

A newspaper at Newcastle, England, commemorated its centenary by republishing its first issue. During the day a country couple called at the office to answer an advertisement for help on a farm. They were informed they were 100 years late.

Red-tape is said to abound in the system of government in France. A village in the Department of Drome applied two years ago to the Sub-Prefect for leave to bring a water supply into the village. The permission was given only a few days ago, after correspondence formal and voluminous.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Sold by Druggists, 75 cents.

Acquitted of Inconsistency—Harry—Was Jungle Joe who wrote "What is so rare as a day in June?" Edith—Oh, no; Longfellow wrote "The Day Is Done."

SOMETHING FOR THE NEW YEAR.

The world renowned success of Hostetter's Stomach Bitters, and their continued popularity for over a third of a century as a stomachic, is largely more wonderful than fiction would seem to be the annual appearance of Hostetter's Almanac. This valuable medical treatise is published by The Hostetter Company, Pittsburgh, Pa., under their own immediate supervision employing 60 hands in that department. The demand for about 11 months in the year on this book, and the issue of same for 1887 will be more than ten millions, printed in the English, German, French, Welsh, Norwegian, Swedish, Dutch, Bohemian and Spanish languages, and a copy of it for valuable and interesting reading to one and all, and numerous testimonials as to the efficacy of Hostetter's Stomach Bitters, amusement, varied information, astronomical calculations and chronological items, etc., which can be depended on for correctness, the Almanac for 1887 can be had free of cost, from druggists and general country dealers in all parts of the country.

There is a suspicion that Uncle Sam has been serving tough beefs oak and strong butter at his Indian boarding houses.

Coughs, Colds, and Sore Throat quickly relieved by "*Brown's Bronchial Troches.*" 25 cts. a box.

RUPTURE AND PILES CURED.

We positively cure in 10 to 30 days all rectal diseases without pain or detention from business, no cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 857 Market street, San Francisco.

Costly Consideration—Cole—Hello, I'm in a quandary. I was just going to dinner. Mole—Don't detain you, then. I will go with you.

Afflicted with Sore Eyes, use Dr. Isaac Thompson's Eye Water. Druggists sell it. 25c.

Beware of imitations of the genuine Seal of North Carolina Plug Cut Tobacco.

ONE ENJOYS

FREMONT'S LENIENCY.

The Pioneer's Clemency to a Prisoner.

AN INCIDENT OF THE MEXICAN WAR.

The Old Soldier Moved by the Tears of Children.

Just before the capture of San Luis Obispo the men under Fremont had been subjected to great exposure and to privation and hardships of all kinds, and their hatred of the Mexicans had reached its height. In fact, it was pretty clearly understood that if any of the enemy was unfortunate enough to fall into their hands they would spend but little time or sentiment in disposing of him.

On Dec. 15, two days after the taking of the town, the pickets captured Don Jose de Jesu Pico, who was called Totci. He was tried by court martial on the charge of breaking his parole, was found guilty and was sentenced to be shot. The fact that Pico was a leader rendered him still more an object of hatred and distrust, and on every side were heard murmurs of approval when it was decided that he should pay the penalty of his treachery with his life.

The execution was ordered for half past 10 o'clock in the morning, and at 10 o'clock the whole battalion was ordered to parade on the plaza, where the execution was to take place. The prisoner was confined in a room in the Mission. Fremont, with two or three of his officers, was present, awaiting the coming of the prisoner's family to take their last farewell of the beloved husband and father. The prisoner, with bowed head, was seated on one side, and opposite stood Fremont with folded arms and face unmoved from its usual stern demeanor.

The officers in grim silence were grouped about when the wife, with her eight or nine young children, entered dressed in the deepest mourning. The wife was a beautiful woman of stately bearing, and the children of delicate and refined appearance. No word was uttered to break the silence, which had grown oppressive. Then the children fell upon their knees, and with tearful eyes and outstretched hands mutely begged for the life so dear to them.

Among the officers present was that stern soldier, Capt. Richard Owens, who had never feared a living foe, but whose eyes were then dimmed with tears at the pathetic sight before him. Suddenly, for he could no longer control himself, he uttered the one word, "Colonel!" Fremont's face relaxed its determined expression, and he exclaimed, "Yes, Dick, I know we had rather meet a thousand of them in the field to-morrow than take this one life." Turning to the prisoner he said, "You are pardoned; you are free."

The prisoner fell upon his knees at Fremont's feet and pressed the hem of his cloak to his lips, exclaiming brokenly in Spanish: "My life was forfeit. You have given it back, and henceforth it shall be devoted to you." Instantly Pico ordered that his horse be saddled, and from that day on there was no more devoted follower of Fremont through danger of every kind than the man whose life he had given back to him.—San Francisco Examiner.

The [illegible] of Cape Town.

Of all the desolate unkempt looking places in the world the suburb of Cape Town we passed through under the shadow of the mountain is the most unkempt and desolate. It is not an acceptable side of the town and no one lives here who can possibly avoid it, for here the celebrated southeaster round the "Cape Doctor," as the Anglo Indians called it, blows the strongest, and the "Cape Doctor's" strongest is no joke.

Where it comes from no one quite knows, for it is a purely local wind and it always seems possible to get behind it by going a few miles to the windward. Some people aver that it is brewed on top of the mountain and comes down just upon Cape Town itself and nowhere else. There are all sorts of queer things going on on top of this mountain, witness, for instance, the celebrated white tablecloth that hangs over it whenever a southwester is at work. But wherever it comes from it is an unmistakable reality, as you soon learn, for it whirls barrow loads of gravel in your face, or spins you around like a teetotum at the street corners.—Foreign Letter.

Conkling and the Reporters.

Roscoe Conkling had an exceedingly genial way in dealing with reporters who were known to him. He was always happy and pleasant in his manners, frankly told them what they wanted to know, but invariably wound up the interview by resting his white hand on the reporter's shoulder and saying: "You will please to remember, my friend, that I have not said anything for publication." Then he would explain how publicity might hamper him in his legal cases. His confidence was always respected. Since he established himself in New York he was frequently called out of bed long after midnight in response to a reporter's call. Even at that hour he was genial, witty and obliging as far as he could be. A short time ago a reporter told him that he would like at eve all things to print some of the interesting confidential chats he had had with him. The reporter dilated on the avidity with which newspaper readers would read such matter. The senator only smiled and said: "Wait till after my death, my friend, wait till I am dead."—Chicago Herald.

Cause of Color Blindness.

An article in The Medical Press advances the idea that the particular defect which gives rise to color blindness lies not in the eye itself but in the brain. Certain persons cannot distinguish between two musical tones yet as they hear both the defect is not deafness or any fault of hearing. Professor Ramsay, the advocate of the idea, therefore argues that in people who have no musical "ear," the brain is at fault, and assumes that it may be equally true that the inability to perceive certain colors is not due to any defect of sight, but to the mental lack of power in interpreting the impressions conveyed to the brain by the optic nerve. If this be true the question of color blindness ceases to be a physical problem and may be classed among cases for the mental physiologist to deal with.—Demorest's Monthly.

An Umpire's Peril.

The lot of the umpire in an amateur baseball game is usually a very unhappy and likewise a dangerous one. In a contest recently played in a town not many miles from Buffalo between the home team and a visiting club the umpire was compelled to decide several close decisions against the local nine, and though the crowd became greatly excited no harm befel the autocrat of the diamond up to the last half of the ninth inning. The score at that juncture was 9 to 8 in favor of the visitors, with the home team at bat. The first man up got a base on balls, the second singled and a sacrifice advanced each a base.

A repetition of the four ball act filled the bags. The next two batters fanned out, to the chagrin of the crowd, who began to think that the umpire intended to rob the home club of the game. The climax was reached when the third man had two strikes and three balls called on him. The excitement was at fever heat, for the next ball pitched meant defeat or victory. Straight as an arrow came the sphere toward the plate, but as the umpire tremblingly prepared to call "Third strike; side out!" the batsman swung around with his club and knocked the ball over the fence. The sensation of joy experienced by that umpire was of a very joyous kind, as he comprehended how near he had come to death's door. He never tires of telling the story, but avers that he will never umpire another ball game.—Buffalo Courier.

The Jews as Farmers.

The Jew was a great farmer in the times of the Scriptures. You see everywhere in traveling through Palestine the evidences of scientific farming. The hills of old Judea were all terraced, and wall after wall of vines rose in steps from the valleys to the summit of the mountains. The remains of these terraces are now to be seen, though the rains of eighteen centuries have almost denuded the limestone rocks of their earth, and the mountains now are only used for grazing.

Palestine was formerly a well wooded country, and it will probably become fertile again if trees are planted. It produces the finest fruit in the world, and the oranges of Jaffa are equal to those of the Indian river in Florida. When the million Russians get to Palestine they will probably recultivate the hills, and an increased rainfall will make the country again a "land flowing with milk and honey."

One of the Jewish farms is near Jaffa. It has 700 pupils, and it contains something like 28,000 acres. There is one on the plains of Sharon, which, by the way, are as rich today as when the Philistines grew fat on them in the time of Goliah, and it has tens of thousands of vines and olive trees. The Jews are continually acquiring more property in the Holy Land, and while I was in Jerusalem the Rothschilds bought another tract of land to add to their school.—Frank G. Carpenter in National Tribune.

Adam of St. Victor.

Adam de St. Victor, who died in or near the year 1150, was the most fertile and one of the greatest of all the Latin hymn writers of the Middle Ages. Dr. J. M. Neale and Archbishop Trench each greatly admired his poetry; and Trench's collection of hymns contains some excellent examples of Adam's work. He was one of the Victorines, or monks of the Augustinian monastery of St. Victor, near Paris. This monastery was, in the Twelfth century, the headquarters of that pietistic mysticism which arose as a protest against the dialectical and dry scholastic divinity of the time.

It had a wide influence in promoting popular devotion throughout western Europe. The other principal Victorine writers were the eminent Hugh de St. Victor (1096-1141—whose writings greatly influenced St. Bonaventura—1221-74—Pierre d'Ailly and John Gerson). Richard of St. Victor and Walter de St. Victor. Hugh was a Fleming or Walloon, and was the founder of the "Summists," a set of theologians so named from his "Summa Sententiarum." Richard (died 1173) was the prior of his abbey, and a Scotchman by birth. Walter was distinguished by the hatred and contempt he exhibited for the dialecticians and "Summists" alike, the principal of the Summists of his time being the celebrated Peter Lombard, called "the master of sentences."—American Notes and Queries.

The Audio Telephone.

A new telephone has been brought out in England, the characteristic point of which is the mouthpiece. The particular advantage claimed by the inventors of this mouthpiece is that it intensifies the sound waves, and thus renders it possible to carry on conversation in an ordinary tone of voice. The mouthpiece is simply a truncated cone, which is clamped on to the telephone. By using an india rubber ring between the mouthpiece and the telephone any escape of sound is entirely prevented. The cone is double, the outer cone being perforated with holes, the idea being that the vibrations caused by the sound waves on the interior cone have full freedom and are entirely protected from contact with external substances.—New York Telegram.

Why It Is Foolscap.

It is often asked why a certain kind of paper is known by the name of "foolscap." When Oliver Cromwell became Protector, after the execution of Charles I, he caused a stamp representing the cap of liberty to be placed upon the paper used by the government. Soon after the restoration of Charles II he had occasion to use some paper for dispatches, when some of this paper was brought to him. On observing the stamp he asked its meaning, and on being informed he said: "Take it away; I will have nothing to do with a fool's cap!"

Displacing the Old Masters.

Instructor (looking over his pupil's work, copying an old master in the Museum of Art)—Now that's uncommonly clever. I wonder what they'll do with the old one when this is finished.—Chatter.

BATHING IN MEXICO.

Sea Baths as a Remedy for Hydrophobia.

RIVER BATHING UNPOPULAR IN MEXICO.

Customs at the Capital.—Apparent Lack of Dignity.

It may be stated as a general rule that on the coast of Mexico bathing is more frequent than in lakes and rivers, owing to the curative properties of sea water, and in some instances on account of climatic conditions. In Vera Cruz, for instance, during the heated term, sea baths are of almost universal use, notwithstanding that sharks are so numerous in the waters thereabouts that bathing places have to be palisaded in, guarded by boats filled with men to beat the water, and otherwise protected against the inroads of the sanguinary monsters. At the castle of San Juan de Ulua, just outside this port, there is a large, excellently arranged bath house for the use of the officers at the castle and their families, and the present writer remembers no similar experience more pleasant than a plunge therein, enjoyed after a morning's tramp around the island fortress, climbs to the top of the lighthouse and signal towers, and other such gentle exercise scarcely in keeping with the scorching heat of summer days there.

On the coast of Barlovento, particularly about Misantla, where rabid dogs are frightfully numerous, sea baths are regarded as a sovereign remedy for hydrophobia. When a mad dog runs amuck there the parties bitten are bundled off to the shore as speedily as possible, and put through a course of a fortnight's systematic bathing. The oldest inhabitants declare that hydrophobia has never been known to develop in a patient who has undergone this treatment. Domestic animals with the trouble are subjected to the same process, and it is said the results are equally efficacious, save in the case of mules, with which it is utterly futile.

FEVER AND AGUE.

On the other hand, although this section is blessed with an abounding number of beautiful streams and rivers, bathing therein is extremely unpopular, the inhabitants declaring that river bathing is sure to produce calenturas (fever and ague), especially if one walk at all in the sun—a performance hardly to be avoided unless one condemns oneself to a prison like seclusion. During a considerable stay in Misantla the writer, accustomed to a cold bath every morning, used to rise at dawn, ride the mile or so to a particularly fine bathing place at the river, take a glorious plunge, tramp about all day in the tropical sun in quest of butterflies, coleopters and "kich like" specimens of natural history, and toward evening again wend to the river, entering the water hot and debilitated, yet never a shake of calenturas appeared. One rides past the little ranchos or villages in that section and sees the people panting like lizards from the heat, inert, languid and useless. Before their doors runs abundance of clear, cool water, and yet they swelter in their hot and dirty misery. In the state of Morelos, particularly in the Cuernavaca and Cacahuamilpa district, baths, whether cool or otherwise, are said to produce calenturas if taken in the evening, while in the morning they may be indulged in with impunity.

In the same way all over the republic there are queer ideas as to the pernicious effects of bathing at certain times or under certain conditions. Few things call the attention of Mexicans more strongly than the eagerness with which Anglo Saxons seek the bath on coming off a journey; the people here prefer to retain the dust of the road and other discomforts attendant on travel for some days at least after debarking, firmly convinced that the other course would result in a bad cold, at least. To bathe, having a cold, would be to sign the death warrant; and one often sees people under these conditions who have not so much as touched the tips of their fingers to water for a fortnight. This is a peculiarly awkward stumbling block for those who desire the practice of cleanliness by their servants. In Chihuahua, for instance, it is almost impossible to induce the servant class to keep themselves tidy to the degree of their presence near one being endurable. In other cities also the writer remembers to have suffered a species of martyrdom from the proximity of the people serving at table, yet their masters seemed to perceive nothing unpleasant, notwithstanding they were people of the highest rank, and themselves of exquisite personal habits.

BATHS AT THE CAPITAL.

In the City of Mexico the inhabitants of the better order, as a general rule, bathe freely, and they laugh to scorn the provincial prejudices on this point, seeing in frequent baths one of the best preventives of rheumatism, typhoid, pneumonia and other ills that flesh is here heir to, owing to the dampness and bad drainage. "I have a bad cold coming on, I must go and take a shower bath," is a remark very often heard here. One is always recommended to walk for exercise after bathing in this city, as one is apt to be chilled if one enters immediately the houses, as a rule rather damp and gloomy. "I am going to take a bath, will it please you to accompany me?" is a very common speech with the Mexicans, who have the habit of inviting one to partake of whatever they indulge in at the moment, be it coffee, a drink, dinner, a ride, a drive, or whatnot, including a bath, as aforesaid.

Mexican men of good standing, lawyers, merchants, etc., may be met going to the baths guiltless of linen, the coat put on directly over the undershirt, sometimes with a handkerchief or scarf about the neck, at others showing the bare throat, and if they chance to meet ladies of their acquaintance they see no reason why that garb is not as appropriate for conversation as any other. The ladies, on the other hand, promenade home through the most crowded streets with their hair streaming, as often as not with a towel hanging down the back beneath it, and no one is ashamed to carry his bathing toggeries, wet and frankly confessed, in a shawl strap, or a great Turkish bath towel or robe on the arm or shoulder, and this is about the only thing which Mexicans may carry for themselves without loss of caste or dignity in the eyes of their neighbors.—Y. H. Addis in San Francisco Chronicle.

From Cedar Wood Pulp.

One of the new applications of a waste product to a useful purpose is the manufacture of paper out of cedar wood pulp, for underlaying carpets, wrapping of wool, furs, etc. The paper makers procure the cedar chips of pencil manufacturers, and the paper made of this material will, it is claimed, preserve articles wrapped in it from the moths.—Scientific American.

It Took Him a Long Time to Decide.

"Just watch this crank," said a man in a restaurant. "He comes in here every day, and goes through a whole act before he gets up courage enough to ask for fried onions. He always finishes by ordering them, but he never avows his real purpose until he has beaten around the bush for ten minutes. The waiters know him well and humor him."

The lover of onions seated himself, and looked over the dinner card with a languid, bored air.

"How are the soft shelled crabs devilled?" he asked.

"They are very nice, sir."

"It's a little late for crabs, isn't it?"

"Yes, it is a little late, sir."

"H'm. Let's see. How is your canvasback?"

"That's very nice, sir."

"But come to think of it I don't care for any duck," and he knitted his brows and carefully scanned the menu card.

"There doesn't seem to be anything here that I care for."

"How would you like a nice piece of roast lamb?"

"No, that doesn't strike my fancy."

"A chop?"

"No. Perhaps you would better bring me a bottle of St. Julien and a slice of cold roast beef. I have no appetite today."

"Very well, sir," and the waiter started off slowly.

"Oh, Gaspard."

"Yes, sir."

"I have an idea."

"Yes, sir."

"I might be able to eat a good steak with a few fried onions."

"They would be very nice, sir."

"Only a few onions, but have the steak good."

"Yes, sir."

"That will be all. You needn't mind the claret."

"Yes, sir." But the lover of onions leaned back in his chair, as innocent appearing as a child.—New York Tribune.

Swimming Devices.

A Spaniard has patented an invention relating to the manufacture of gloves, having webs between the fingers, like those on the feet of water fowl, so that on spreading out the fingers during the propelling stroke in swimming a comparatively large surface will be presented to the water, and consequently the propelling action will be greatly increased. Apparatus heretofore devised as aids to swimming have been in most cases of a cumbrous, heavy character, fatiguing to use and subject to become defective. The inventor claims that his apparatus is exceedingly simple, besides being portable and reliable and easy to use, affording a firm and sure hold on the water, and enabling the swimmer not only to keep himself above the water, but also to perform rapid evolutions with facility.

Another method of facilitating swimming is reported from England in the shape of an invention of a swimming boot. The boot consists of canvas tops and wooden soles, attached to which are two blades of mahogany (some are made of steel), which close with the forward motion of the legs and open with the backward strokes. The surface measurement of the two blades on each shoe is about 144 square inches, while the total weight of a single complete shoe is about thirty-one pounds, it being loaded with lead to prevent too much buoyancy. A public competition of swimmers provided with this device and those without it is said to have resulted much in favor of the former.—Chicago Tribune.

Locusts Easily Digested.

The people of Zanzibar should stand high for the comprehensive character of their cuisine. Among other delicacies are small monkey and fruit eating bats. Locusts are relished by the Bedouin of Mesopotamia and some other eastern tribes. They are placed on strings and eaten on journeys with bitter and unleavened bread. The Hebrews, who were prohibited eating many kinds of food which our larger experience teaches us are palatable and wholesome, as well as some that we do not venture to touch, were permitted to have their fill of locusts.

The locust is an article of diet to this day, but only of the very poor; it is thrown into boiling water and eaten with salt. To live on locusts and wild honey conveys a more accurate picture of extreme poverty and frugality to a traveler in the east than to any one else. Locusts, however, are not always cooked, sometimes they are eaten fresh. They are said to have a strong vegetable taste, the flavor largely depending, as might be expected, on the plants on which they have been feeding. Dr. Livingstone, who showed his common sense by not being fastidious, considered them palatable when roasted.—Scottish Review.

A Democratic Duke.

The late Duke of Manchester, when on his first visit to Australia, in 1879, was entertained by the colonists in a princely fashion. In Queensland the weather was intensely hot, and the duke left his party and rode ahead in his shirt sleeves (with his coat strapped before him) and wearing a soft felt hat. On his arrival at the bush public house he found a crowd awaiting him. One bushman, stepping up to him, said:

"Halloa, have you seen the duke? Will he soon be here?"

The peer replied:

"I am the Duke of Manchester."

The bushman surveyed his visitor, walked around the horse, and after a critical inspection said before the crowd:

"You're no blooming duke!" Tableau.—London Tit Bits.

A curious phenomenon is reported by the United States consul at Maracaibo, in Venezuela. Near the Rio de Orro, at the base of the Sierra of the Colombian frontier, there is a horizontal cavern, which from time to time ejects huge globules of bitumen, that explode like bombshells with considerable noise, and the pitch, forming a black glacier, runs into a kind of pool or lake near the river bank.

RICH MEN'S SONS.

Facts as to the Probabilities of Success.

STATISTICS OF A MANUFACTURING TOWN.

Lack of Correct Training.—The Circuit of Fortune.

Hon. J. H. Walker, of Worcester, has published some remarkable facts as to the probabilities of success in a New England manufacturing town. He states that in 1840 there were thirty persons engaged in the eight leading manufacturing industries in that city, of whom twenty eight began as journeymen, that fourteen failed, and that of the rest fourteen retired or died with property, while of the sons of the thirty only three now have any property or died having any. In 1850 there were seventy five persons engaged in substantially the same industries, of whom sixty eight began as journeymen. Of these forty one failed and thirty retired or died with property, though only six of the sons of the seventy five now have any property or died leaving any. In 1860 there were 107 persons engaged in these industries, of whom 101 were journeymen. Of these forty three failed, and out of the 107 only eight now have property or died leaving any. In 1878 there were 175 engaged in the ten leading manufacturing interests, of whom 162 began as journeymen. Out of these only fifteen were the sons of manufacturers. It is yet too early to know what their sons will amount to. These statistics are the fruit of Mr. Walker's personal knowledge of individuals and their history. They indicate what is probably true of other cities where industrial pursuits take the lead.

The statement is correct enough, perhaps, to generalize upon, or at least to demand an explanation. Men look to their sons to succeed them in business. There is no sign more common today than the one which indicates that the sons of a famous man are still carrying on the business or industry which he established. It keeps the firm name in honor, and is a source of family pride. There is in the mind of every self made man a certain consciousness of family that is not to be put aside. If he does not belong to an aristocracy by birth, he likes to feel that by his own industry and exertion he has raised his name above the mass of names, and that he is sure in the next two or three generations to have a good family standing in the community. Half the comfort of living with many people is the fact that some of their ancestors were distinguished people. But, if Mr. Walker's statistics can be depended upon, very few except the traditional old lines in New England have any chance of building up the family name, or of preserving their integrity beyond one generation. He presents the sons of our wealthiest manufacturers in a very humiliating light.

There is a saying in the United States that it takes three generations to make the circuit of the fortunes of life. It is first industrious and successful father, then rich son, then poor devil. Mr. Walker's facts bear out this statement. Where property is not entailed, where the risks are taken which all business men are obliged to take, where so much depends as depends here upon the amount of personal will each one is able to put into a business whose conditions are constantly changing, there is no certainty that a manufacturing industry can be transferred from father to son, or that any mercantile house can maintain itself under its founder's sons, unless they are trained as severely as he was trained to follow today the same, and yet not the same, conditions of success which he followed in order to gain the advantage of others in the race of life. The difficulty is easily explained by the usual proverb about rich men's sons, but one is not willing to admit that this almost universal failure of these sons to hold their own in life is due to idle habits and fast living.

There is something fundamentally rotten in American society when such a story as is here outlined can be told of a community as respectable, industrious and high minded as Worcester is known to be. Why should not the powers of acquisition which are possessed by the parent be transferred to the son? Where is your principle of heredity? You look into the home conditions of our great men to find how far the parents were responsible for communicating the spark of genius, and why must we find the generation of manufacturers' sons turning out so badly that there is nothing good to be said for them? It is contrary to the law of succession to sanction this state of things. It is a familiar principle that the exactions of the city grind human energy out of men and use up their vital force, so that the country constantly replenishes the town, but what are we coming to as an industrial commonwealth if there is to be no succession of property in leading families, if the only outcome of our civilization is to elevate one of the honest poor men of today to a position where his grandson is almost sure to turn out a poor devil? This is a plain question, and if there is such dry rot in our system of things that the bottom is constantly falling out of what we call good society, what are we coming to as a democratic people? If it is but three generations from poor man to poor devil in the city of Worcester, what will it be in Springfield or Lowell or Fall River, and what are the actions of rich families in Boston coming to?

To be serious, there is something fundamentally wrong in the education which successful manufacturers give their sons. It is too often the case that the son begins, not where his father began, in the simple and honest training of a country home, but in a luxury which his successful father is fond of flaunting in the eyes of his fellow men. The son does not earn the dollar that he spends, he does not know how to work, because he is not compelled to earn his own living, he has few or none of the plain virtues which are the precious possession of poor boys who drive cows to pasture, or sell newspapers, or do chores for such loose change as they can earn in this way. The virtue is taken out of such a youth at the start. His father thinks that he will not have him climb the ladder as he did, and does not require him to do anything that is hard. The discipline over his morals is apt to be as lenient as that which is exercised over his studies or his habits of usefulness. The result is that the devil takes charge of the youth and makes him his child forever.—Boston Herald.

The Dear Girls.

Ethel—Do you think he'll commit suicide if I reject him?

Maud (sweetly)—Oh, no! He didn't when I rejected him.

Ethel—Ah, but you must remember the two cases are different.—Munsey's Weekly.

THE LITTLE PEOPLE.

A Dreary Day.

Bobby (Sunday afternoon)—What a dreffel long, dreary day Sunday is, mother.

Mother—Why do you find it dreary, Bobby?

Bobby (after some thought)—I s'pose it's because pa stays home all day.—Texas Siftings.

Revision.

Mr. Robert Johnson, who lives on the Fisher farm, has a little boy, Dave, who is just old enough to be taught to say his prayers. The other evening his mother was teaching him the Lord's Prayer, and got along very well until they reached the line, "Give us this day our daily bread."

The mother repeated it twice, but the child made no attempt to follow her.

"Why don't you say it?" urged his mother.

"'Cause I don't want bread," said the boy; "I want pie."—Oil City Derrick.

A Fresh Solution.

Little Mollie was caught by her mother stealing apples from the tree and severely rebuked. Her mother told her she must not touch those apples, as she was going to make preserves of them.

On the following Sunday little Mollie's school teacher, while walking home with her from Sunday school, asked her why God forbade Adam and Eve to eat of the tree in the midst of the garden.

"Because he wanted to make preserves of the apples," was the childish reply.—Texas Siftings.

Not Altogether Friendless.

The small child is to the front again. He had been naughty. The naughtiness of youth and the naughtiness of age are widely different.

"If you do that nobody will love you," the tender mother told him.

"Tain't so. I know one who'll like me," he answered.

"Who?"

"Satan. He likes the bad ones."—San Francisco Chronicle.

A Case of Choke.

Jessie's teacher gave her pupils a party, to which "little brother" was invited. He ate heartily of ice cream and cake, and was found reposing on the bench in the porch, while the other children were at play in the yard. When asked why he didn't join them, he exclaimed:

"Oh, I can't play, my pants choke me so!"—Youth's Companion.

A Hidden Sting.

A little 3-year-old Rocklander went into a market last week, and, helping herself to a green pepper, tried to eat it. After she had failed the marketman asked her what the matter was with the fruit, and she replied, between sobs, "Vere was a bumble bee in it."—Middleboro News.

A Profound Reflection.

"Grandpa," inquired Johnny Bliss, "must everybody die?"

"Yes, my child. Every one in this world must die when his time comes."

"Well"—long pause—"what I'd like to know is, who'll bury the last man?"—Detroit Free Press.

A Pointed Composition.

A Burlington teacher told one of her boys that the next time he wrote a composition there must be some point to it. The subject of his next disquisition was "Needles."—Burlington Free Press.

Two Stories With a Shave.

"We always want what we haven't got," remarked a philosophic barber, as he rubbed some Croton water on the reporter's head and charged him for bay rum. "Twenty years ago one of my customers was complaining that his mustache wouldn't grow, and now when he has a mustache he is kicking that his hair won't grow. When a man gets as bad as that he either becomes a Socialist or else makes a hermit of himself and ponders over the problem as to whether life is worth living.

"A man came in this morning and asked me if I could cut his hair without blowing in his face. He said he had been trying to get his hair cut for a whole week. The first barber he went to blew away the clippings at each movement of the shears, and his breath denoted that whisky was his chief article of diet. It was bad whisky, and it smelt worse at second hand. So the man skipped out of the chair with one side of his head cropped. This one didn't drink whisky. He ate garlic. The man hurried out of the place with his neck half shaved. This was the condition I found him in, but I soon had him presentable. When he was going out he asked me why I never blew the hair off a customer. 'Because I can't,' said I. 'Don't you see I have the asthma?'"—New York Evening Sun.

Poor St. Louis.

Chicago Man (to a fellow passenger)—Have you ever been in St. Louis, sir?

Fellow Passenger (proudly)—Well I should say so! Why, I live in St. Louis, stranger.

Chicago Man—Oh, I am glad to know that. I want to stop off at St. Louis, and I'll be much obliged to you if you'll tell me when we get there. I wouldn't like to be carried by.—The Epoch.

At the German.

(Figure—in which the leader claps his hands and each man takes a girl, one man being left out.)

Miss D—Really, Mr. C., this is quite an unexpected pleasure.

Mr. C.—Ah, yes. Well, you see, the leader told me to take what I could get.—Life.

LONG EARED PESTS.

Attempt to Exterminate Rabbits in Australia.

THE VARIOUS EXPERIMENTS TRIED.

Many Farms Abandoned Through their Depredations.

It is morally certain that Australia and New Zealand those rabbit ridden countries will be quick to adopt the "drive" idea and probably the farmers of those distant islands will find the method more effective in the matter of allaying the rabbit nuisance than all the theories of inoculation.

A reporter met a gentleman recently who had been largely identified with pastoral interests both in Australia and New Zealand and from him some interesting facts were ascertained in connection with the efforts of antipodean agriculturists to combat the plague of the long eared pests.

"The drive idea," said the gentleman, "is not entirely new to Australians. They have for years employed a somewhat similar method of ridding pastoral lands of the destructive kangaroo."

From kangaroos the conversation drifted back to the rabbit question and the gentleman from the antipodes related his experience in the matter together with the efforts of colonial governments to subdue the pests.

First of all I suppose you have heard that valuable pastoral holdings both in New Zealand and Australia have had to be abandoned through the depredations of rabbits and I assure you that the losses these harmless looking creatures have entailed have been very much underestimated. The rabbits in the colonies are burrowers, and this makes them harder to get at. A few years ago a system of fencing with wire netting was introduced there, but it only proved effective on uniformly level land. Rabbits do not as a rule burrow on flat places but where the fence ran over the slightest knoll or hill bunny would get his deadly work in by riddling the mound with holes and opening up an avenue to the inner pastures.

"On small holdings the owners obviated the difficulty by sinking narrow trenches and inserting the wire netting below ground, but the cost this system would entail in making a large run rabbit proof would constitute total abandonment of the place a profitable alternative. It is only on these large runs that the depredations are felt severely as around farms and tillage lands the constant presence of plowmen and other laborers scares away the colonial rabbit, which is as shy as it is destructive. I have often read of grasshopper plagues in this and other countries, but I don't think there can be a more desolate sight than that of a run which has been abandoned to rabbits. I believe that out that way the furry destroyers breed four or five times a year.

"The methods experimented with in order to exterminate them have been as varied as they were effective. Poisoned grain was tried, but a short experience illustrated the fact that valuable sheep and cattle dogs were killed through eating poisoned rabbits, while sheep were occasionally poisoned by eating the grain. Then an enterprising German came along and announced to the long suffering colonial stockmen that he had an infallible remedy for the curse. His plan was to inject some poisonous acids into the burrows, but as far as appeared on the surface the rabbits devoured his patent medicine and asked for more. Then we began to introduce ferrets and kindred small but vindictive animals, which it was expected would glide noiselessly into the burrows, and in time wipe the rabbits off our section of the globe. The ferrets however, after a while tired of an exclusive rabbit diet and turned their attention to poultry. They have also been known to attack children, there being one case in particular where a child at Damara, New Zealand, had its eyes nearly eaten out before assistance arrived. I have not heard anything anent the ferret question lately, but I should not wonder if the colonists are not in pursuance of the chain of destruction they have organized looking around for some antidote to ferrets. The only method that has been in any manner effective in keeping the rabbits down in the colonies has been the employment of men known as rabbiters. They are as a rule, clever with the fowling piece, and the run holders supply them with ammunition and tucker (Anglice provisions). They wage a steady and merciless war on the pests, and as rabbit skins properly cured find a ready sale, rabbiting is a fairly lucrative calling. The introduction of this method of meeting the difficulty on the New Zealand side has been brought about by the establishment of a rabbit department, the maintenance of which costs the government $100,000 a year.—San Francisco Examiner.

Not So Bilious as He Was.

Ben Tuthill tells a good story on himself thus:

"I have a notion that beer gives any one a tendency to biliousness, and so thinking I have acquired the habit of looking at my tongue whenever I am in front of a mirror. The other day in New York I stood chatting with a party of friends near the Fourteenth Street theatre. We were just in front of a little cigar store with a very bright clear plate glass show window, and as we chatted I caught my reflection on the polished surface and just as a matter of habit stepped up to it and put out my tongue so for a look. It was all right and I turned back to my friends and went on chatting. In about a minute a man seven feet long came out of the door of the cigar store and came straight up to me with his fists doubled up. Says he:

"'You young cub, I'll teach you to run out your tongue and make faces at me.'

"I believe he would have pounded me into a jelly if the party had not interfered. I haven't been bilious since."—Minneapolis Journal.

A Bean in His Nose.

We know a child who has a morbid propensity to force buttons, beans, etc., into his nostrils. He keeps his whole family in a state bordering upon terror, for they never know at what precise moment they may be called upon to perform an operation upon Master Harry's nasal appendage. Pressure against the empty nostril and quick, strong breathing into the open mouth will dislodge the foreign substance and send the suffering youngster upon his way rejoicing.—Good Housekeeping.

In the Dressing Room.

Swellman (before the glass)—Well, if I am undersized nature has been good to me in one respect. I have a small, narrow foot.

Tallboy—So you have. But, then, nature has done just the same for the donkey.—Pittsburg Bulletin.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY FEBRUARY 6 ..... 1891.

Kansas can make the proud boast that she has elected a man to the United States Senate who is above suspicion of having bought the place. The farmers elected their candidate honestly.

If Governor Markham would proclaim a day of prayer throughout the State thas the life of Senator Hearst might be prolonged beyond the present session of the Legisture, many citizens who are not church members would join it. Mr. M. H. De Young wants to succeed Mr. Hearst in the Senate.

An appropriation of $100,000 is asked for the State Mining Bureau. If any miner in Inyo County knows where and how that Bureau has ever benefited him in mining operations to the value of the one hundred thousanth part of one dollar, please send along the information for publication. Perhaps other Counties have fared better than Inyo.

With his last breath Secretary Windom declared his hostility to silver coinage. Other men as wise as he are firmly convinced that silver coinage is not only an act of justice, but one of the most pressing needs of the country. The deceased was a Wall street broker, and all his financial opinions were influenced by the gold interests of Wall street. No matter how honest by intention any man may be, great interests will influence his judgement.

"For Och! mankind are unco weak,
And little to be trusted,
If self the wavering balance shake,
It's rarely right adjusted."

The Virginia "Chronicle" hopes Tom Fitch will be a candidate for the United States Senate two years hence. It is reported that Tom has made a rich strike in a mine and has been offered $2,000,000 for it and the "Chronicle" says if he will chuck half a million or so into the pool he can get away with the fight. As seats in the Senate go nowadays, the most potent, grave and reverend seignors of that august body must be tempted to laugh at each others faces when they meet like Roman Augurs when they pretended to foretell future events by examining the guts of birds.

Governor Markham has called the attention of the Legislature to one evil that should be remedied. Tons of rubbish are sent out from the State printing office, and no human being ever reads a page of it. Reports of all kinds must be printed, no matter how voluminous and worthless they may be, and the expense to the State is very great. The Governor recommends that all such Reports be referred to some person or persons appointed and authorized to condense them and prepare them for publication. If this were done the Reports might be made of some practical use, and there would be a great saving by stopping the printing of useless trash.

The Legislature is asked to give $300,000 in aid of the display to be made at the Chicago fair. One of the commisioners, Mr. M. H. De Young, went before a Committee of the Legislature a few days ago and said that one third of the whole appropriation would be needed for the expenses of the commisioners. There are seven members of that commission, and what a glorious time they can have if each one shall be allowed $14,285 to splurge with. Holy Moses, how they could "go it"! The demand for such an extravagant sum to be spent by the commissioners casts suspicion upon the whole matter. There should be liberal provision made for the State exhibit, but it is not by splendid apartments at the most expensive hotels where the commisioners shall revel in luxury and wild extravagance that the State will be benefited. It is by showing what we can produce, not by proving how recklessly we can squander, that the big fair will do us any good.

Lake View Hotel
Keeler, Cal.
John Barnes, Prop'r.

First-class hotel in every respect. The table always supplied with the best in the market. Clean, nicely furnished rooms. Transient visitors will receive every courtesy and attention.

THE BAR
—Is constantly supplied with the finest—
Wines,
Liquors,
& Cigaas.

PUBLIC NOTICE

Is hereby given that unless the foregoing taxes and costs are paid I will on

TUESDAY,
The 24th Day of February, 1891,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 30th day of January, A. D. 1891.

J. S. GORMAN,
Tax Collector of Inyo county, California.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, Cal.

NOTICE IS HEREBY GIVEN THAT AT A meeting of the Board of Directors, held the 16th day of December, 1890, an assessment (No. 11) of Ten Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, No. 132 California street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 30th day of January 1891 will be delinquent and advertised for sale at public auction, and unless payment is made before, will be sold on FRIDAY, the 20th day of February 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale. By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 135 California St., San Francisco, California.

DIED.

GOODALE.—At Independence, February 4th 1891, Ezra M. Goodale, aged about 64 years.

Mr. and Mrs. Nelson Beaudry have been in town all the week.

A. R. Jones and J. D. Jones came down from Bishop yesterday and are in town.

Mr. J. H. Bulpit and Mr. C. Wonacott came down from Bishop on Monday. They left town for home yesterday morning.

P. H. Mack, Attorney at Law, has opened a law office at Independence. All business entrusted to him will receive prompt and careful attention. See his card.

It is understood that Ezra Goodale left a will by which the children of his brother, Mr Thomas J. Goodale, will inherit nearly all of the property the deceased owned.

S. G. Sneden has been appointed Postmaster at Bishop to succeed A. M. Given. W. M. Richards has been appointed Postmaster at Citrus to succeed Finlay McIver.

Rumors are current that the lower levels of the Comstock mine will be pumped out and deep mining resumed with all the vigor of former years. McKay, Fair, Hayward and other big mine operators are said to be backing the project.

A meeting of tax payers was held at Reno, Nevada, last Saturday evening to discuss matters of interest. One of the speakers was Hon H. H. Beck and the *Gazette* reports him as saying among other things, "No community on the inhabited globe are laboring under such a burden of taxation as the people of Nevada." The people of Inyo County will judge for themselves what reasons move anyone who advocates annexation to the State of Nevada.

Estray Notice.

On or about the 27th day of December, 1890, there came to my place, at Camp Independence, one red bull; ear mark, half over-crop on left ear, half under-crop on right ear; brand undistinguishable; aged about 4 years. The owner of the animal is hereby notified to pay costs and remove the same or it will be sold on Saturday, March 7th, 1890. J. W. LACEY.

Death of a Pioneer.

Another old settler of Owens Valley passed away on Wednesday morning. Ezra Goodale, about the end of last week, came from his home at Black Rock, and was staying at Mairs' hotel. He was ailing when he came to town and though medical attendance and good care were given him, he failed rapidly till death ended his suffering. Dr. J. D. Blair says the cause of death was pneumonia. Mr. T. J. Goodale, brother of deceased, was with him till the end. Deceased had no family, and it is not yet known what disposition will be made of the property he left. The remains were buried in the Odd Fellows Cemetry at Independence yesterday afternoon. Many of the townspeople and others from Black Rock attended the funeral.

Entitled To The Cake.

Austin, Texas, is entitled to take the cake for check. The *Commercial* Club of that city offers to furnish this paper weekly with a large amount of matter about "agricultural, industrial, commercial, financial, educational, social and religious matters etc, all concerning Austin in particular and Texas incidentally. The "Club" magnanimously offers to let us do this advertising without paying anything for the privilege, but on condition that the paper shall be regularly mailed to the address of the "Club". This reminds us of the man who went from New Jersey to Texas and afterward returned to the former State. Some of his neighbors asked him how he liked Texas, and he replied, "If I owned Texas and hell I would sell Texas and live in the the other place."

A Very Important Matter.

An important petition was presented to the Supervisors this week by J. H. Bulpit of Bishop. By an act passed by the Legislature and approved March 7th, 1889, Boards of Supervisors "may by ordinance declare all or any portion of any river or stream lying within the county, which has not been declared by law to be navigable, which is not in fact navigable for commercial purposes, to be a public highway for the floating and transportation of logs, timber and lumber and the same shall thereupon become and be a public highway for such purpose etc." The act confers powers upon Boards of Supervisors to lease right of way on such streams, such lease to enclude right for the holder to "collect tolls for the rafting, floating and booming of logs." Under this act Mr. Bulpit asks the Supervisors to declare that portion of Owens River within Inyo County from the Mono County line to a point one mile south of the bridge near Laws station, a highway, and grant him a lease of the same for twenty years. Should his petition be granted he will at once begin work to remove obstructions from the river and make it capable of floating logs and timber of all kinds. He would build a large saw mill below the Laws bridge and construct suitable booms on the river. There is a great body of fine timber about the head waters of Owens river within Mono County, but the only way it can be made valuable for use is by improving the river as proposed in the petition. If this highway shall be opened it will give to Owens Valley an inexhaustible supply of good lumber for all purposes, and also of fuel, and at prices at least one third less than are now charged. The river may afterward be declared a highway to Owens Lake, and thus give equal benefit to all parts of the valley. The improvement of the river would not cost the county one dollar, and on the expiration of the lease the tolls would be an important item of revenue. A similar petition was presented by other parties relating to Bishop Creek. Both petitions were laid over till the next regular meeting of the Board.

PROCEEDINGS OF BOARD OF SUPERVISORS.

MONDAY, FEBRUARY 2.

The Board of Supervisors of Inyo County, State of California, met in regular session at 6 o'clock, p. m.

Present Supervisors Sneden, Steward, Stewart and Love. Absent, Supervisor Eddy.

Minutes of meeting held January 5th, 1891, read and approved.

Supervisor Sneden presented the following petition, which was read and approved:

"Whereas, the trial of the action of The People of the State of California vs. W. T. C. Elliott, on a change of venue from the County of Inyo to Kern county is reset for February 24th, and the Board of Supervisors of the County of Inyo, in regular session, having given the matter due consideration, do hereby, in the interest and in behalf of the County of Inyo, respectfully ask of Alvin F. Fay Esq., District Attorney of the County of Kern, that he bring to the notice of the Superior Judge of Kern county, this our request, and move that said action be dismissed, for the reason of its having been tried twice in the Superior Court of Kern county and the jury failed to agree each time, and the great expense connected therewith, and we being convinced that under the circumstances no conviction can be had."

TUESDAY, February 3.

The Board met at 9 o'clock a. m., same members present.

A number of bills were examined and allowed. Bills presented by Dr. Allingham and F. E. Densmore rejected.

The Board adjourned until 2 o'clock p. m. at which hour it reassembled, the same members present.

A number of bills were examined and allowed.

On motion ordered that C. Mulholland be appointed Justice of Peace in Third Township and G. W. Drake Constable in First District. Petition to appoint R. Way Constable rejected.

Reports of various Road Oveeseers examined and bills allowed.

Report of viewers on road from Alvord to Laws accepted and same declared a public highway.

Petition presented asking that Owens River be declared a public highway laid over till next regular meeting.

Rebate of taxes allowed S. J. Newland and Mrs. Mates.

Whereupon the Board adjourned until 9 o'clock a. m. of Wednesday.

WEDNESDAY, February 4th.

Board met at 9 o'clock a. m., same members present.

Petition granted for a road from Bishop to a point on the C. & C. road.

Contract for care of Indigent Sick awarded Mrs. M. Lewis at $500 for an average of four patients and 85 cents per day for excess of said average.

Dr. J. D. Blair was appointed County Physician at a salary of $500 a year.

The names of forty grand jurors and one hundred trial jurors was drawn.

Petition of residents of Road District No. 6, asking for the formation of a new district to include the Georges Creek settlement granted and John Shepherd appointed Overseer.

Petition for the appointment of John Baxter as Justice of Peace granted.

The Clerk was ordered to procure a revolving book-case for the Superior Judge's office.

Ordered that $6,000 be transferred from the Building Fund to the General Expense Fund and $2,958 from the Building Fund to said fund.

Rebate allowed A. R. Jones from Bishop School Fund. Claim of further reduction laid over till next meeting.

THURSDAY, February 5th.

Board met at 9 o'clock a. m., same members present.

Ordered that the county printing be paid for at the rate of 75 cents per square for the first insertion and 25 cents for each subsequent insertion.

P. Clinton allowed rebate of taxes.

Bill of F. E. Densmore reconsidered and laid over till next regular meeting.

Claim of Jos. Seely for $166 allowed in sum of $116.

The Inyo *Index* was declared the county official paper.

Reports of Auditor and Treasurer accepted and approved.

Ordinances Nos. 29 and 30 were re-enacted.

An Ordinance was passed changing the meetings of the Board to the first Mondays in January, April, July and October of each year.

FRIDAY, February 6th.

Board met at 9 o'clock a. m., same members present.

On petition the Inyo Canal Company were ordered to build a bridge across said canal at Citrus.

Application of S. G. Sneden for an appropriation of $350 to build a bridge across Owens River laid over till next regular meeting.

Chas. Kanaday was allowed $12 a month on Hospital fund.

Ordinance No. 36 was adopted providing for the appointment of an officer to collect sheep license tax, to be paid ten per cent. of amount collected.

Meteorological Summary.

Following is the report of the Signal Service Station at Keeler for the month of January, 1891.

Total movemement of wind, 5986 miles.	
Extreme velocity of wind, direction and date, 43 miles on 27th.	
Total precipitation, 0.00 inches.	
Number of days on which .01 inch or more of precipitation fell, 0.	
Number of cloudless days	19
Partly cloudy days	8
Cloudy days	4

H. E. WILKINSON,
Sergt., Signal Corps, Observer.

A Chance For Office.

Two petitions from physicians at Bishop were presented to the Board of Supervisors, each asking to be appointed County Physician. Both petitions are rejected. But there is yet a chance for one of the applicants to get an office. By an Act of the Legislature, approved March 17th, 1889, the Boards of Supervisors in each county are compelled to appoint a Health Officer for each unincorporated town of five hundred inhabitants or more, and must fix the salary of such officer. The services of such officer is a charge against the county. Should the Supervisors fail to make such appointment it becomes the duty of the District Attorney to begin action against the Supervisors to compel them to do their duty. Office seekers are referred to page 43 of the Statutes and Amendments made by the last Legislature.

Selling Whiskey To An Indian.

Guadalupe Angulo was arrested this morning by Sheriff Gorman for selling whiskey to an Indian. When charged with the offense he at once pleaded "guilty". The man is very aged, professed sorrow for his act, and declared he would never again do so. He was let off with the very light fine of ten dollars.

THOMAS & HILL.

Why does this man stare so? He is simply listening to the marvelous cures effected by Dr. Pierce's Golden Medical Discovery.

The following case illustrates:

February 14th, 1890.

WORLD'S DISPENSARY MEDICAL ASSOCIATION. Buffalo, N. Y.:

Gentlemen—A remarkable case has occurred in our territory. J. N. Berry, a man about thirty years of age, was going down rapidly. He tried physician after physician, patent medicines, home receipts—in fact, everything. He went to a noted sanitarium and returned no better. We all thought he was dying with consumption, and only a few weeks of life were left for him.

He commenced "Golden Medical Discovery," and at the same time commenced to mend. He has used about two dozen bottles, and is still using it. He has gained in weight, color and strength, and is able to do light work. It is just such a case as we should have listened to rather suspiciously, but when we see it we must believe it.

It has trebled our sales of "Golden Medical Discovery."

JOHN HACKETT & SON,
Druggists, Roanoke, Ind.

In all bronchial, throat and lung affections, lingering coughs, spitting of blood, weak lungs and kindred ailments, the "Discovery" effects the most marvelous cures.

'Twas the day after Christmas, when all through the house
Not a creature felt hungry, not even a mouse.

RELIEF FROM INDIGESTION.

Frank W. Gillett, 221 Second Ave., New York, writes:

"I deem it my pleasure to testify to the phenomenal effects of BRANDRETH'S PILLS, upon myself, in eradicating from my system the most aggravated form of indigestion, the attacks of which were nearly as severe as spasms. After a costly treatment two boxes of BRANDRETH'S PILLS have put me in a better condition than I have been for years."

It is ten to one that you did not get what you expected or wanted when you explored your stocking Christmas morning.

Each year finds "*Brown's Bronchial Troches*" in new localities, in various parts of the world. For relieving Coughs, Colds, and Throat Diseases, they have been proved reliable. *Sold only in boxes.*

Two Birds with One Stone—Red—What a lucky fellow he is! Not—I should say so. His business is already made for Christmas.

WHY!

WHEREFORE. The virtues or merits of a remedy for pain do not consist in its being as good for redness as other remedies, but in the fact that it is better, in being more prompt and sure, and therefore the best for the specific purpose. It is not an idle catchline that strikes the eye thus:

ST. JACOBS OIL
THE GREAT REMEDY FOR PAIN,
IS THE BEST.

It is the best cure for all aches and pains, and it holds

THE TRUE PROOF.

To this specific fact **Archbishops, Bishops, Clergymen, Lawyers, Doctors, Governors, Generals, Senators, Members of Congress and Legislatures, U.S. Consuls, Army and Navy Officers Mayors and Officials,** testify and unite in saying: "We suffered pain;

OTHER REMEDIES FAILED,

and St. Jacobs Oil cured promptly and permanently." For the same reason

THE POOR MAN

finds what he seeks and needs, is not deceived and will have it at any price.

A STAMPEDE.

Corralling a crove of horses gives you plenty of work for hours. You don't have time to think what the weather is. You let everything slide, till the work is over. But the cowboy is never unprepared. When this "picnic" happens, whatever the weather, he is not drenched and wet to the skin before it's over, because he is always provided with a "Fish Brand Pommel Slicker." With one of these saddle coats on, you can't get wet if you try. Your entire saddle will be inside the coat, and it will be dry, too. Did you ever try the Pommel Slicker? Just try one, they cost very little. Then no more colds, fevers, rheumatism, and other results to exposure of weather. Every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

IN A COAL MINE.

Wandering Through Passages Underground.

DESCENT IN THE PASSENGER SHAFT.

Gloomy Passages and Narrow Tunnels. —The Blast.

The entrance to nearly all mines disappoints preconceived notions. One cannot say exactly what he expected, but he certainly expected something different from the reality. Here, for instance, there was no indication of the existence of the mine save in the presence of the breakers and the huge pile of culm. At a short distance from the breaker was a little shed about ten feet square, and yawning in this was the mouth of the passenger shaft. The other shaft, up which are hoisted the the cars loaded with coal, opens directly into the breaker.

As we gathered about the passenger shaft the car was hoisted several times, bringing up a number of miners and laborers, and all looked like imps from the infernal regions. Their bodies and clothing were black as jet from smoke and coal dust, and the only white one could see about them was the whites of their eyes. In their caps were extinguished torches, which still gave out a black and sullen smoke. Men we found them, talking freely of their lives and rather enjoying the curiosity they inspired. Their appearance, and the mouth of that black shaft leading down a sheer 300 feet into the bowels of the earth, led some of the party to conclude that they would enjoy a bird's eye view of Providence on the surface rather than tempt Providence under ground. So less than forty made the descent.

Each of us was given a little torch, and then we gathered about the shaft. The elevator is simply a platform like a freight elevator, with no railing at either side. Above it is a hood to keep off the water constantly dripping down the shaft from the seams in the rock. Ten at a time we crowded upon the elevator, the torches flaring up around us and filling our lungs with smoke.

Perhaps I reveal a woeful ignorance when I say that I expected to see as soon as I stepped from the car a vast rugged chamber, glittering with distant lights and alive with eager workers. I had read descriptions of mines and seen pictures of them, and yet this delusion clings to me. But in one instant vanished all these chimeras, and I beheld a narrow tunnel, so low that I involuntarily stooped my head, whether such a proceeding were necessary or not, and darker than mid night. On either side were walls of coal, glittering strangely as the rays of light fell upon them, and hewn into all sorts of irregular shapes and narrow recesses. But the roof or ceiling seemed as smooth and polished as marble. The vein of coal runs of almost uniform thickness, and the slate above and below forms a comparatively level floor and roof.

Along this narrow passage we wandered, the light from our flickering lamps making the darkness ahead the more impenetrable. At short intervals were chambers where the coal had been mined more extensively, but between all chambers pillars at least thirty feet in thickness were left to support the tremendous weight of the superincumbent rock. And in the chambers themselves were posts and beams of wood erected for the same purpose. One could scarcely realize that all these passageways and chambers were carefully laid out by engineers and surveyors, and that plans were drawn, marking all the turns and divergences as accurately as the map of a city.

But such was the case, and not a blow of the pickax is struck that is not foreseen, and so two passageways approach each other from opposite directions, and are finally united in one. At intervals are heavy, air tight doors of wood, which serve the purpose of breaking the currents of air, give a perfect circulation, and allow the steam fans to exhaust the fire damp that may have accumulated in any chamber, no matter how far distant. As these were closed behind us they gave a crash like thunder, every sound being magnified by the rocky walls. Finally, when we had gone hundreds of feet from the shaft, we began to see dim and twinkling lights in the distance, and to hear echoing cries, the crash of loaded cars rolling along the rail, and the clang of steel on the sullen rocks. Mules furnish the only motive power, and perhaps it is because of their well known stubbornness that they needed such vociferous direction that for minutes we would hear shouts and cries that were echoed until they seemed to come from a hundred lungs. Then we would range ourselves close along the walls and up would rumble and clatter and clash a loaded car, drawn by several straining mules and driven (or rather directed, for no reins were used), by a boy as black as the coal itself, his eyes glittering strangely in the light from the smoking lamp stuck in his hat band.

And finally we reached the miners themselves, for all the men we had previously seen were merely the laborers. Each miner had a chamber to himself, and into the walls he was viciously digging his drill. Of course his eyes get accustomed to the semi gloom, but to us it seemed as if he must work solely by the sense of feeling. The miner we surrounded told us that he was almost ready for a blast. While we waited a car rolled noisily up to a pile of broken coal, and a black and grimy laborer caught up a shovel and sent the lumps thundering into the car. Before it was filled the miner told us that his charge was ready and bade us go around the nearest corner. Fifty feet away we were halted, and then came an anxious pause, each one agitated somewhat, if the truth must be told. Then came a loud and reverberating roar, followed by the crash of tumbling rock. The earth shook beneath our feet, and from the slate roof, a foot above our heads, splinters of rock seemed to fall around us. Perhaps no one really expected the roof to fall and crush us, but there was a sigh of relief when the blast was over. We hurried back to the chamber with the smell of powder in our nostrils. A jagged hole was pierced in the coal, and as we looked through the smoke and dust, a blackened and demoniac face appeared at us from its depths. The blast had opened a passage directly through into the adjoining chamber, and the face was that of the good natured miner on the other side. The coal that the blast had loosened lay heaped in confusion by the opening. So shattered had it been by the explosion that it could easily be broken by a pickaxe into size convenient for handling. Nothing then remained but for the laborer to shovel it all, large and small lumps and even the dust, into a car, that was hoisted into the breaker.—"F. W. H." in Albany Argus.

It Happened in Chicago.

Mrs. Packer presents Mr. Northside to Mrs. Southside.

Mr. Northside—I have had the pleasure of meeting Mrs. Southside before, I believe.

Mrs. S.—Pardon me! I don't remember.

Mr. N.—Think a moment.

Mrs. S. (after a profound meditation)—Oh, I beg a thousand pardons! I recall the occasion now. You were my very first husband. I'm such a stupid little thing. So glad to see you. How is the present Mrs. Northside?—Washington Critic.

THE LADY AND THE BURGLAR.

How a Woman Kept Her Nerve and Helped to Capture a Burglar.

It was just after the war, and things were in a very chaotic state. We—my husband, my little one and I—were living in Richmond then. On the night of which I write I could see that John was worried about something. He seemed preoccupied all during supper, and after the things were cleared away he took his seat at the table, with a pile of medical books reaching above his head on the right, and an immense volume spread open before him.

He evidently had a puzzling case on hand, and was not in a humor to be talked to. I took out my crocheting and worked for a short time on little Anna's sacque. Then I yawned, crocheted a round or two, yawned again, and finally, in despair, folded up my work and went up stairs to my room. Little Anna had preceded me there, and lay tucked away in a corner of my bed in the rosiest slumber imaginable.

"I won't put her in the crib just yet," I thought, "she is sleeping so sweetly." I had got, in the process of disrobing, to the point of dressing wrapper and slippers, and was shaking out my hair preparatory to its arrangement for the night when the brush slipped from my hand and fell with a sharp ring upon the floor. As I stooped to pick it up a sight met my eyes the very recollection of which makes me grow hot and cold by turns. A negro was under my bed. He was drawn up as close as possible to the wall and lay there watching me. I am only an average woman, not particularly courageous or particularly anything that I know of. How I ever kept from shrieking or fainting will ever remain a mystery to me.

Supernatural strength must have come to my aid. I felt in a moment the importance of concealing from this man the fact that I was aware of his presence. I arose from my stooping posture, and began brushing my hair with the utmost coolness and deliberation, but a very white face looked back at me from the mirror before which I stood. I believe, if anything, I brushed my hair longer than usual that night; then, dividing it in two parts with great exactness, began plaiting it, turning over in my mind all the while what course of action I should adopt. Suddenly I remembered that I had forgotten to bring up the basket of silver which we always kept in our room at night.

"There," I exclaimed aloud, "I left the silver down stairs. I must ask John to bring it up with him."

"John! Oh, John!" I said, going out in the passage and calling down the steps, "bring the spoons and forks up with you when you come."

There was no answer. The dining room door was shut and John was deep in his book.

"How provoking!" I exclaimed. "I will have to go down for them myself."

Every detail of that night's adventure seems graven, as with an iron pen, upon my mind. The very sound of my slippers—loose at the heel—as I went down the bare steps is distinct in my memory.

"John," I said, as closing the dining room door behind me I crossed the room and placed my hand upon my husband's shoulder, "don't exclaim at what I'm going to tell you. There is a man under the bed in our room. He doesn't know that I have seen him. Slip quietly out at the back door and call for help before he makes his escape." I don't think ten minutes could have elapsed before my husband returned, accompanied by two policemen armed to the very teeth, but it seemed like hours to me as I stood there thinking of our little one sleeping so unconsciously on our bed, and of the villain lying beneath it.

He was a big, burly fellow, it was discovered, when at last he had been dragged from his hiding place and induced to assume the perpendicular. On his person, in addition to my diamond ring, gold watch and set of pearls, was found a bottle of chloroform, a big knife and a loaded revolver. The next day a very tremulous heroine was reading in the morning paper an account of a brave woman's adventure with a burglar. The brave woman—the account said she was myself, too.—Philadelphia Times.

Part of a Stove of Centuries Ago.

A farmer of Joanna, near Reading, in digging an excavation the other day unearthed a large iron plate three feet square, bearing date April 4, 1570. Two Indians are represented on one side of the plate, and a pair of anchors on the reverse side. The plate also bears this inscription in German: "Oh, hope yet for a better time, as all troubles will cease. Hope to see that blessed beam of peace, when hatred, wars and strife shall cease." Farmer Moore's barn was built on property secured from the original proprietaries, Thomas and Richard Penn, sons of old William Penn, then governors in chief of Pennsylvania. The old Quaker settlers in the county lived side by side with religious refugees from Holland and Germany, and had intimate business dealings together, and it is believed, therefore, that the iron plate just found was part of a stove made in Germany or Holland 320 years ago.—Philadelphia Times.

A Cow's Costly Meal.

Presley Brewer, of Greene county, while working in the woods pasture, hid his pocketbook containing $103 under the roots of a tree. A cow grazing near by came upon the treasure and devoured it before Mr. Brewer could rescue it.—Indianapolis Sentinel.

The Author's Compensation.

The usual royalty paid to the author of any book, provided the publisher takes the risk and bears the expense of publication, is 10 per cent. of the retail price on each copy sold. Frequently the publisher is exempted from paying royalty on the first 1,000 copies. Some publishers have blank forms for contracts with authors, but contracts for publishing different books vary so widely that a general form cannot easily be made.—Writer.

CHILDREN OF ISHMAEL.

Indiscriminate Almsgiving Encourages Vice.

THE UNWISDOM OF THE CHARITABLE.

A Chart Which Illustrates Social Degradation.—Prevention.

The children of Ishmael are still with us. They are not the roving Indians or reckless cowboys of the western plains, nor the desperate "moonshiners" of the Tennessee mountains. They live near us in New York, or wherever our homes may be. Their garments touch ours in the public places. Strangest of all, we may be responsible in one sense for the Ishmaelitish madness in their blood; and yet, if we recognized that responsibility, we would complacently count it to ourselves for righteousness. For we consider almsgiving a cardinal virtue, while we are too short sighted to estimate the effect of much indiscriminate almsgiving in encouraging moral flabbiness and mental and physical inertia, in increasing pauperism and crime, in multiplying the number of the children of Ishmael throughout our land.

This is one of the most suggestive topics treated at the national conference of charities and correction recently held in Buffalo, and elsewhere considered at some length. The speaker, Rev. Oscar C. McCulloch, of Indianapolis, illustrated his study in social degradation by a chart showing the social condition of thirty families through five generations. This meant some illustration of the life history of 1,692 individuals. Their history had been followed for fifty years. There had been several murderers in the group, and thieves without number. The majority lived by begging or petty thieving. The children died young. Licentiousness characterized all the men and women. From this came mental and physical weakness, general incapacity to work, and in certain cases, hopeless idiocy.

MORBID HEREDITARY TENDENCIES.

This study of hereditary morbid tendencies is most interesting, but it presents nothing absolutely new. Maudsley, of England, and Charcot, of Paris, have naturally included the subject in their study of mental pathology. In fact, in the present century—and especially since Galton developed the study of heredity into a science—hereditary influences of all kinds have received the most careful consideration, not only by medical students of pathological states of the mind and body, but also by novelists. We need recall but one instance, the Rougon-Macquart series of Zola, in which that uncompromising realist has essayed to do precisely what Mr. McCulloch did upon the chart—that is, trace the development and effects of morbid tendencies from generation to generation.

But Mr. McCulloch himself has used this study of heredity merely as an illustration of his striking declaration that the tendencies to mental weakness and general incapacity which he describes are met and encouraged by the benevolent public with unlimited public and private aid, which is practically an incentive to an idle and vicious life. He charged that our elaborate systems of public charities are in a large degree responsible for the perpetuation of this idle and vicious stock, and what public relief failed to accomplish private benevolence supplemented. "The so called charitable people who give to begging men and women and children have a large sin to answer for." The remedy indicated by the speaker was to close up official outdoor relief, check private indiscriminate charity, and get hold of the children. The last is an admirable suggestion. There is no practical way of restricting private almsgiving, save by educating people to the idea that unwise alms foster pauperism and the bringing of more paupers into the world. It would be impossible to do away with the great public charities of New York even if it were desirable. But the tendency of charitable work can be modified and turned toward prevention rather than cure. Children who are early taught a spirit of independence and self reliance will not become paupers. If public charities encourage this spirit and rigidly insist that nothing can be had without working for it, if work is possible, their evils will be reduced to a minimum.—Frank Leslie's.

How to Utilize Grasshoppers.

The grasshopper plague in Minnesota has assumed so serious a character that the farmers around St. Paul have decided to pay $1 a bushel for the insects in order to stimulate the efforts for their destruction. In Venezuela recently a prize of $4,000 was offered to anybody who would invent a means of profitably converting locusts into grease or any other useful article. We cannot claim originality for the idea, but why not adopt the Indian system? The aboriginal farmers of the plains, we have been told heretofore, do not regard the grasshopper as an unqualified evil. When their wheat crops grow undisturbed by these insects the Indians eat the wheat after it has been prepared in the usual way. When the grasshoppers come and eat the wheat, however, the Indians eat the grasshoppers. In this way they are always sure of a good crop of one kind or the other and are happy in any event.

There is authority for the statement that fried grasshoppers are not unpalatable, the testimony of white men who have dined on them being that they have a "rich, nutty taste," not unlike peanuts or something of that sort, and that the most squeamish person would enjoy them if they were served up in batter or under some other name. We do not care to press the subject too far, but why not give the frisky visitors a chance to redeem their reputation by transferring them from the field to the kitchen, from the furrow to the frying pan? The Indian holds the oyster and shrimp in scorn, and his, we know, is a blind and unreasonable prejudice. Why not learn from him at the same time that we teach him to esteem our delicacies? Let our friends in Minnesota, then, name the grasshopper the "prairie shrimp," for instance, and gather him in and make the most of him.

An Everlasting Chimney.

To build a chimney that will draw forever and not fill up with soot you must build it large enough, sixteen inches square; use good brick and clay instead of lime up to the comb; plaster it inside with clay mixed with salt; for chimney tops use the very best of brick wet them and lay them in cement mortar. The chimney should not be built tight to beams and rafters; there is where the cracks in your chimneys come, and where most of the fires originate, as the chimney sometimes gets red hot. A chimney built from the cellar up is better and less dangerous than one hung on the wall. Do not get your stove pipe hole too close to the ceiling, but about eighteen inches from it.—New York Journal.

Poisonous Wine Bottles.

A French chemist reports that wine is affected differently by bottles of different manufacture. Some bottles improve while others injure it. An undue admixture of lime and magnesia, which are often substituted for soda and potash in glass on account of their cheapness, acts injuriously upon the wine.—Chicago Herald.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

The Only Drawback—"I don't mind going to Sunday school," said Harry, "and rather enjoy comin' home from it. What I don't like is stayin' there."

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the City of Toledo County and State aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE.

FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON,
Notary Public.

Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

☞ Sold by Druggists, 75 cents.

Christmas is over, but not the Christmas season. Gifts and grace are still appropriate, to say nothing of those graces of spirit which have all seasons of their own.

IF YOU HAD A FRIEND

About to visit some section of country where malarial disease, either in the form of chills and fever or bilious remittent was particularly rife, what would be about the best advice you could give him? We will tell you—to carry along, or procure on arriving, that potent medicinal safeguard, Hostetter's Stomach Bitters, known throughout malaria plagued regions, here and in other countries, as the surest means of disarming the miasmatic scourge, and robbing it of its fell destructive influence. Not only does it fortify the system by increasing its stamina, but overcomes irregularity of digestion, the liver and the bowels, and counteracts the unfavorable effects of overexertion, bodily and mental exposure in rough weather, or occupation too sedentary, or laborious, loss of appetite and excessive nervousness. The functional disorganization, bilious secretion and sleep have in it a most powerful and reliable auxiliary.

Yule is come, and Yule is gone,
And we have feasted well;
So Jack must to his flail again,
And Jenny to her wheel.

If *every woman* in this land knew for herself the actual quality of Dobbins' Electric Soap, *no other* washing soap could be sold. Millions *do* use it, but other millions have never tried it. Have *you?* Ask your grocer for it.

The children and the express companies wish Christmas came every week, but the simon-pure Santa Claus would be satisfied with one every five years.

Cuticura Soap

FOR BAD COMPLEXIONS, RED, ROUGH HANDS AND BABY HUMORS.

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvelous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin, and softest hands and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.

Sold throughout the world. Price, 75c.

Send for "How to Cure Skin and Blood Diseases."

Address POTTER DRUG AND CHEMICAL CORPORATION, Proprietors, Boston, Mass.

Aching sides and back, weak kidneys, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER, 25c.

VASELINE.

FOR ONE DOLLAR sent us by mail, we will deliver, free of all charges, to any person in the United States, all the following articles carefully packed in a neat box:

One two-ounce bottle of Pure Vaseline	10 cts.
One two-ounce bottle Vaseline Pomade	15 "
One jar of Vaseline Cold Cream	15 "
One cake of Vaseline Camphor Ice	15 "
One cake of Vaseline Soap, unscented	10 "
One cake of Vaseline Soap, scented	25 "
One two-ounce bottle of White Vaseline	25 "
	$1.10

Or for stamps any single article at the price named.

If you have occasion to use Vaseline in any form be careful to accept only genuine goods put up by us in original packages. A great many druggists are trying to palm off inferior goods as ASEPTINE put up by them. Never yield to such persuasion, as the article is an imitation without value, and will not give you the result you expect. A bottle of Blue Seal Vaseline is sold by all druggists at ten cents.

Chesebrough M'f'g. Co. 24 State St., New York.

BAD, BUT TRUE!

A CALIFORNIA CRAZE.

The Latest Fad Among Artistic People.

COLLECTIONS OF INDIAN BASKETS.

Beautiful Work of the Dusky Basket-Makers—Hunting for Specimens.

The latest fad or craze in California, especially in the southern portion, is to possess a collection of Indian baskets It is the correct thing, and some of the most artistic homes in the state have rooms decorated with them Who started the craze is not known, but some one discovered that the baskets possessed great artistic beauty, were rich in harmonious coloring and formed attractive ornaments for library and parlor, and the demand began It was the old story of new lamps for old, and dealers and others went around the country exchanging new modern baskets for the old ones of the Spanish and Mexican families

The baskets are exhausted, at least the old ones, being now in the hands of a few collectors and others who will not sell them The baskets cost from $1 50 to $3 usually, and bring from $10 to $50 apiece. Unless the reader has seen some of these works of barbaric art this price will seem excessive, but the graceful shape, the rich brown tints, the age and association, give them a value appreciated by those who have engaged in their collection The cheapest way to make a collection is to go to some collector and buy their baskets outright, but the most pleasurable method is to take a carriage and go about the country among the Indians and Mexicans and buy them one's self Many of the finest baskets come from the Indians north of San Francisco, and others have been collected in Los Angeles, San Diego and San Bernardino counties In the latter counties are the remnants of the Mission Indians, hidden away in the mountains at Pala, Pauma and at Pachanza

The experiences of the amateur basket collector are varied, and no better way in which to study the habits of the present Indians can be found The successful basket fiend must have what is popularly known as "cheek;" must walk into the bedrooms and private apartments, insist upon trunks being opened and contents shown This may seem a high handed proceeding, but it is necessary as even while the people wish to sell they, in the majority of cases, say at first that they have no baskets, and when they are produced do not wish to sell on account of the ancient aunt or grandparent who has handed them down If, however, the would be purchaser has the staying power the basket can be secured The sellers generally believe the Americans to be great fools for paying such prices A half breed informed the writer that the people were crazy and would give anything, and with a laugh, he said "They pay five times as much for the old ones as they do for the new" That a basket which they use to sift their flour in could serve as an ornament is beyond their conception; yet this is the end to which these old utensils are put They are tacked against the walls to show the figures or color, or hung over doors or in corners The large ones find a place near the fire to hold the wood, while others are distributed about the library for papers and magazines, indeed, their usefulness grows upon one The finest collections are photographed by their owners and make a fine and artistic showing

It is as an art that the work of these people commends itself, not alone in the form of the baskets, but in the marking and arrangement of colors, and that such artistic feeling should be found among people whose ideas of art, as we recognize it, are of the crudest description, is remarkable After so many years of association with white people it would not appear strange if some of their ideas of ornamentation were obtained from them, yet this is extremely rare All the ornamentation is unique, possessing an individuality that cannot be mistaken The lines are often graceful and of great geometrical beauty, radiating from the center A common design is a series of triangular or arrow shaped figures worked into radiating lines Some seem to represent flashes of lightning in the zigzag motion Human figures worked in, often extending completely around the basket, with clasped hands, are seen in some of the best baskets, while deer and other animals are sometimes introduced The colors are usually dull reds or browns, yellows and black, and in almost every case the blending is harmonious Where these people obtain their ideas is an interesting question, but probably from nature—the foliage, the bending grasses, etc., suggesting the lines of grace and beauty

It is not necessary to go far from the centers of civilization to see basket makets The Diggers produce beautiful baskets not far from San Francisco, while the Indians about Monterey, Santa Barbara, Los Angeles and other localities still make coarse ones in the same primitive way

The basket work of the California Indians is valuable in several ways It is characteristic of the different tribes, and they can be traced by it Some baskets are beautifully ornamented with feathers, and this shows that they were made by the Indians north of San Francisco One for which a large sum was recently paid is ornamented with the red feathers of the woodpecker, while around the edge are the plumes of the plumed quail The feathers are woven in while the basket is being made Fineness and age are two important qualifications

The California Indians employ two general methods in basket making; the coil is either twined or whipped The Diggers, as before stated, produce fine baskets of great beauty, while the Klamath and McCloud Indians make twined baskets so fine that they can be used to hold water In the baskets from the Eel river tribe a double coil is used The Modoc women produce some beautiful shapes. We see cones, inverted truncated cones, shallow dishes, some like hats or half eggs, vases, long and narrow, others flat, with short necks Plaques are common, while some baskets are almost perfect spheres Many of these are made of willow slips and pine roots, stained in the southern county with nail rust The material used mostly by the California Indians is the plant known scientifically as "rhus aromatica," or squaw berry In the houses or ramadas of basketmakers the raw material is seen—twigs cut and scraped, eight or ten inches in length and tied together with a string They are dyed with plants and nail rust Young girls can be seen soaking the twigs and scraping off the bark ready for the old women to use The old baskets may be considered a lost art, and comparatively few modern ones are being made, not enough to meet the demand.—C. F Holden in San Francisco Chronicle.

LOBSTER AND COD CULTURE.

A New Departure in the Propagation of the Shellfish.

It is very probable that unless we have resort to artificial culture to replenish our lobster fisheries there will be a marked decline in Nova Scotia's output during the next few years. Already Newfoundland is ahead of us in this branch of fish culture, for under the management of Adolph Nielsen, a Norwegian expert, "the ancient colony" has taken a new departure in the propagation of cod and lobsters. In a recent article Rev. Moses Harvey writes that the fish hatchery on the shore of Trinity bay is the largest in the world for the propagation of codfish and lobsters, and capable of hatching 300,000,000 of cod and 200,000,000 lobsters in a single season.

A single mother lobster can stow away no less than 20,000 eggs, and she carries these about with her until they are ripened and hatched. The lobster trapper takes these mother fish and carries them to the factory, where they are thrown into boiling water, and of course the eggs are destroyed. The quantity of lobster ova that perish in this way is beyond all calculation, and is one great cause of depleted fisheries.

Mr. Harvey thus describes Mr. Nielsen's ingenious methods: He gets the female lobster at the factories before they are boiled, and with a sort of spoon constructed for the purpose he strips the eggs from the fibrils and returns the lobster uninjured. He takes the eggs, which are not nearly so delicate as those of the cod, and places them in the incubators, where the water is kept in constant motion.

After a time, longer or shorter according to the degree of ripeness they have reached before being removed from the mother, these ova are hatched. With some of them only two days are required; in the case of others less advanced a month or even two months may be needed to hatch them. Unlike the cod the young lobster must be fed, for it has no yolk sac to feed on when it breaks from the shell. Mussels chopped fine, with occasionally a few yolks of eggs, furnish food on which they grow rapidly, and in five or six days they have gone through their first shelling and are fit to be set free in the water to pick up their own living.

Mr. Nielsen has invented floating incubators to be placed in the water near the lobster factories which are scattered around the shores. In these incubators the eggs are placed and attended to by men properly instructed. He has 432 of these floating incubators distributed this year at thirteen different stations—thirty-six at each. They are reported to be working admirably. There would be no serious difficulty involved in making similar experiments upon our own coast, and we understand that the energetic minister of marine already has the project under consideration.—Halifax Herald.

Selling the Queen a Tombstone.

Mr. Andrews came pretty near selling the queen a sample of his marble—that would have been a great thing for him. He was telling me all about it the other day.

"O. R. Johnson, the vice consul," said he, "got me a card to the queen's drawing room in May, and I went to it attired in a court dress which I hired at a shop in Bond street. There was an awful crush, but I contrived to get pretty near the head of the procession by tipping a sixpence to the lord chancellor of the privy chamber. I bowed and kissed the queen's hand in great shape; told her I had always admired and sympathized with her—that I particularly revered her for her devotion to the memory of the departed. My words seemed to touch her deeply. She answered that it was her determination to keep that memory forever green. 'In that case,' said I, 'let me give you a pointer—buy a fifty foot slab of my verd-antique marble!'"

"What did she say to that?" I asked.

"She didn't say anything," replied Mr. Andrews, "but a rude fat man in gilt lace and a cocked hat told me to keep moving on around to the left. I'd have closed a sale if it hadn't been for him."—Eugene Field in Chicago News.

In the Cushing's Fire Room.

Very few of those who watched the torpedo boat Cushing as she took her spins around the harbor, or as she appeared in her cradle in the dry dock, realized how trying is service on board the little vessel, even in time of peace. When the Cushing is under way the temperature in the little engine room gets up to anywhere from 130 to 150 degs., and in the narrow quarters wherein the twenty-three officers and men are stowed the thermometer for hours at a time will register 100. But such things must be when you put 1,700 horse power machinery into a boat of only ninety tons displacement and the safety valves are set to blow off at 250. The fire room of the Cushing when she is making her highest speed, 31.4 miles an hour, must give the unfortunate men in it a vivid idea of how salamanders feel.—Boston Transcript.

Hide Tommy Sometimes.

Mr. Dashboard Poore the other evening invited a few friends to dinner. During the repast Howells, one of the guests, while roaring over one of Poore's bon mots, accidentally knocked one of those fashionable hock glasses off the table, and it smashed upon the floor. No one seemed to take notice of the incident except Tommy, the precocious pride of his mother's heart, who exclaimed: "Oh, mamma, it's one of those glasses we borrowed from Mr. Robinson, next door."—Jewelers' Circular.

Making Use of Wrecks.

In Chatham it will be noticed that there are on many barns and many outbuildings signs which, to the uninitiated, are, of themselves, meaningless. They have fantastic names carved upon them, such as "Flying Cloud," "Marguerite," etc. They are all that are left of once gallant ships that have been wrecked on the bars and shoals off Chatham. Many there are of these.—Provincetown Beacon.

ANOTHER POCAHONTAS.

A Tale That Beats the John Smith Romance.

THE LOVE OF A SIWASH MAIDEN.

Saving the Life of a Chineso Cook.—Mixing Three Languages.

Pocahontas has been outdone by an Alaskan maiden. John Smith was only in danger of having his brains spattered over the surrounding real estate when Pocahontas rescued him with her love. The John Smith of Alaska was not only in danger of being killed, but of being eaten, when the woman in whose eyes he found favor saved him.

The Alaskan John Smith was not a titled explorer when he fell into the hands of the savages, nor was his name John Smith. He was only a common, yellow skinned sea cook. His name is Ah Wing, and there is nothing attractive about him. He is about as homely a mixture of Chinaman and Malay pirate as could be found in a day's walk. His Pocahontas answers to the name of Julie just now, but nobody knows what her Indian name was. She is a long way of being Pocahontas' equal in beauty, and the Siwash features of generations were consolidated when her face was made. Still the romance is there.

Ah Wing and Julie, now Mrs. Ah Wing, arrived here on a codfish schooner several months since, but have not gone into society yet. They reside on Ross alley, in Chinatown, and submitted to an interview. They only submitted to it, they did not take part in it, and when it came to securing the story of their love the reporter was obliged to obtain his information from a third party, to whom Wing had confided it in explanation of his off color bride.

Ah Wing some nine years ago was a cook in the employ of the navy department, and was shipped north on the Jamestown. While on the Sitka station Wing's time expired or he deserted—just which is not quite plain—and shipped aboard a whaler. The whaler was wrecked and Wing was cast upon an inhospitable ice floe. Julie was the daughter of a chief of a tribe of Indians, and while hunting with her father discovered Ah Wing, who was as near dead from starvation, cold and exposure as it was possible for him to be and retain life. For days and days Julie nursed him, and he finally recovered to find himself the object of a great deal of attention on the part of the Indians. They could speak no Chinese or English, and Wing had no comprehension of their dialect. He was at a loss to understand the solicitude with which they fed him, and the interest they took in watching the accumulation of fat on his ribs. At last the horrid truth dawned upon him—at least so he says. They were going to barbecue and eat him.

He attempted to escape, but was captured and returned to the village and put under guard. The fatal day arrived. Wing was informed by pantomime that an incision would be made in his neck and his life fluid allowed to escape into a soapstone basin. He gave all up for lost, when he was inspired by the sight of Julie in tears. He made love to her. She comprehended and went to ask papa. The old chief was fond of his daughter and could refuse her nothing. He issued an edict against baking Wing. The remainder of the village protested, and the chief was obliged to state why he desired the stranger's life preserved. The objectors gave in, and Wing and Julie were married in Indian style.

Wing lived with the tribe for some time, but never became very popular. He was not much of a hunter, and preferred to lie around the house, sewing with the women, to chasing polar bears, walruses, seals and the like.

Finally he had a chance to escape. A boat's crew came in from a schooner to trade for skins. Their cook was dead, and Wing begged them to take him away with them. Wing's father-in-law gave him leave of absence for three months and sent Julie along with him to insure his return.

They sailed away, and after much marine wandering and transferring from one vessel to another, arrived in San Francisco. Wing had a taste for the needle and secured a job at tailoring. The faithful Julie proved an adept and shares Wing's labors. They still find some difficulty in conversing. Wing knows a few words of English and a few of Indian. Julie knows a few of English and a few of Chinese.

When their discussion becomes animated they resort to all three languages at once, and the talk is very exciting. There is a little Wing now, and he is learning all three languages.

Their home is on the top floor of a Ross alley tenement, where Julie is rapidly being converted into a Chinawoman by her fellow lodgers. She is quiet at all times, and is presumably mourning for the freedom of her native snow fields. She does not go out, because the noise and the bustle of the streets frightens her. Wing's leave of absence has long since expired, but in the confines of civilization he has become the master, and has no intention of returning to the land of his wife's people.

The story has been pretty well authenticated, with the exception of the intention of the Indians to eat Wing after killing him. His own countrymen do not believe this part of his story, but Wing adheres to it stoutly, and the strongest tie between him and his wife is his gratitude to her for saving him from such a fate.

Voyagers to the far north state that they have heard of cannibalism among the Indians, but it has always been attributed to isolated instances of starvation's necessity, and not habit.—San Francisco Examiner.

Judge J. P. Smith, of Fort Worth, Tex., whose wealth is now estimated at $1,000,000, once walked from Kentucky to Texas because he did not have money enough to pay his passage.

WEALTHY BUT INSANE.

Millionaire Lehman's Luxurious Apartments in Bloomingdale Asylum.

Descending to the first floor the locked doors on the right of the parlor open upon the private suite of apartments occupied by the insane Chicago millionaire E. J. Lehman. Mr. Lehman was and is still the proprietor of the biggest retail dry goods store in Chicago.

Mr. Lehman is suffering from a form of paresis, and although he is but 42 years old there is not the slightest hope of his recovery. He lives like a king in his apartments, and his family pay for the luxuries with royal liberality.

He has three apartments, which occupy all the right side of the house on the lower floor. For these rooms and board alone he pays $150 a week. Then he has three special attendants who keep with him night and day. These cost $42 a week additional.

He keeps his horses and carriages and rides out once a day. One of the attendants does the driving, while the other two sit on either side of him. For the many other luxuries he enjoys Mr. Lehman pays out in all $400 a week. He pays more than any other inmate of the asylum.

While at times he is quiet and pleasant Mr. Lehman is one of the wildest men in the asylum when an insane fit strikes him. It is because of this that it is necessary to keep three attendants watching him. He has smashed thousands of dollars' worth of furniture since his incarceration. He is a tall, athletically built man, and is possessed of enormous strength when he becomes wild. Although his three attendants are all trained athletes they have great difficulty in holding him at times.

While he sleeps in one of the small rooms an attendant sits at his bedside and watches all night, while the other two sleep in the large room a few feet distant.

In addition to the usual iron gratings on the windows several strong bars have been placed. Several times a week the Chicago millionaire tries to break out of the rooms. He has almost wrenched the iron gratings from their places, and on one occasion almost succeeded in climbing up the wall to the glass transom above the top of the door and breaking through. To guard against a repetition of this the glass has been removed and wooden boards have been nailed in its place.

About once a month Mr. Lehman's wife comes on from Chicago to see her husband. Sometimes she brings one of her four children with her. She is not permitted to speak to him or allow him to see her.

While she stands in one part of the grounds he is driven past her in his carriage, and in this way she is enabled to catch a brief glimpse of his face.

In his rational moments Mr. Lehman talks to his attendants about his wife and children. He says that he has the sweetest family in the world and that they all love him.

In his parlor Mr. Lehman has a handsomely carved organ. He is very fond of music and is a musician of no insignificant skill. He plays upon the organ at times half the day and completely enchants the other inmates of the house.—New York Journal.

A Fortune from Beans and Beef.

Oliver Hitchcock, the Park row beans and beef man, has made more money from the sale of the two articles of diet mentioned than any man in the world. His fortune is estimated to be $750,000. He is said to own considerable stock in the New York Central railroad and to have a large sum invested in bonds and mortgages. He is a remarkably sturdy man for his age—he being 74 years old. Every day finds him behind his counter, at the corner of Beekman street, slicing the juicy cornbeef or ladling out the Boston vegetable. He works only four hours a day now.

Mr. Hitchcock began selling beef and beans forty years ago, and he has been at it continuously ever since. Some of the most famous newspaper men of New York city have dined at his humble restaurant. Horace Greeley was one of Hitchcock's regular customers. Hitchcock cannot remember why he made a specialty of beef and beans, but he has tangible evidence that if these articles are properly cooked and decently served they will bring a handsome remuneration.—New York Journal.

Looking for Wealth.

The first question that an enterprising young immigrant asked at the barge office upon his arrival the other day was "Where is Gold street?"

"Silver street is a good deal nearer," answered a waggish officer.

But the young man had no interest in silver. He wanted gold. When he was asked why he inquired for Gold street he assumed a mysterious air and declined to answer. The officer told him where the street was, and he went away satisfied.

"Now, there's an instance of what they expect," observed the officer. "I suppose that young fellow thinks that all he has to do is to go to Gold street and fill his trunk with gold cobblestones."—New York Times.

Electric Lights in a Theatre.

An electrician who visited the Lyric theatre in London, where a very complete electrical installation has been put in for theatrical purposes, says that the arrangements on the stage are perfect, and he has never seen any theatre in which the light from the battens can be varied both in intensity and color to so great an extent and with such ease. No limelights are used, the necessary effects being produced by portable arc lamps. There is not a single gas jet anywhere on or near the stage, and the plant has run for twenty-one months without the slightest breakdown.—London Letter.

According to a recent writer saws have been discovered in Germany and Denmark which belong to the bronze age. The metal of which they were composed was cast into a thin shaft, and serrated by breaking the edge.

SCRAPS AND CLIPPINGS.

A War Correspondent's Valuable Collection.

THE REV. JOHN TODD'S "INDEX RERUM."

The Development of the "Reference Department" of a Library.

Every person who uses the Brooklyn library to any extent is cognizant of the fact that its "Reference Department" is a prominent feature of that institution. It is now proposed to supplement the reference library by the addition of a collection of carefully kept scrap books, and already a portion of this collection is ready for the public's use. The attention of a reporter was called to this addition to the library's usefulness not long since, and he called upon Acting Librarian Bardwell to obtain some further information in regard to it. Mr. Bardwell is quite an enthusiast upon the subject of keeping scraps, and when questioned upon it thus expressed his views:

"The Rev. John Todd, of Pittsfield, Mass," he said, "some years ago published an 'Index Rerum; or, Index of Subjects: intended as a manual to aid the Student and Professional Man in preparing himself for Usefulness.' This work, which passed through over twenty editions, was a blank book with an alphabet printed at the head of the pages and directions illustrating its utility and method of use, which consisted in jotting down important facts or striking passages met with in books, or in noting under the appropriate subject in the index the volume and page where the extract could be found when wanted. William Wirt says: 'There is not a fact within the whole circle of human observation, nor even a fugitive anecdote that you read in a newspaper or hear in conversation, that will not come in play some time or other; and occasions will arise when they will, involuntarily, present their dim shadows in the train of of your thinking and reasoning, as belonging to that train, and you will regret that you cannot recall them more distinctly.'

"Dr. Todd's index was for the purpose of noting where an article might be found, and served to some extent the same purpose as the numerous books of quotations and extracts that have been published in recent years.

"The department of scrap books now in process of development at the Brooklyn library bids fair to be an index rerum on a very extensive scale. It is a collection of clippings and extracts from newspapers, commenced many years ago by Mr Wilcox (H. K. W.), a war correspondent, who commenced clipping and filing away extracts for his own personal use. These, as time passed on and the collection became larger, he divided into subjects and kept in boxes labeled according to the contents of each box. At his death he left his collection, the accumulation of more than twenty years, to the Brooklyn library, where it is now being carefully collated and arranged under a classification similar to that of the library catalogue. The clippings are being pasted on sheets of manilla paper, which after being properly dried and pressed are arranged by single sheets (not bound together, as this would preclude the incorporation of any further material in its proper place under its subject heading, as additions are made from time to time). These sheets are kept in boxes that are labeled on the back so as to indicate the subject and the subdivision of subject contained in each box.

"The arrangement of the material thus kept being strictly by subjects and their various ramifications, and the whole being formed into one alphabet, no index is required to guide the searcher for information. All that is necessary is to look at the labels until the subject needed is reached in the line. Then take down the box that contains what is wanted and use it. As time passes and the library collection is developed it is expected it will be found of especial value to literary people as containing much valuable material which will be made easily available by its arrangement under subjects, bringing together items of information that would otherwise be so scattered as to be practically lost unless collected under some such plan as this."

"What do you think, Mr. Bardwell, of the value of a scrap collection in general?"

"As to the value of material thus collected a variety of opinions may exist, but so far as possible the source from which the information was obtained is mentioned, as well as the date of publication. The question suggests itself whether every literary person may not find it advantageous to keep a collection of scrap books. Items that appear from day to day may prove exceedingly valuable in the future, and the only time to secure these is while the eye is upon them, as almost any one who has tried to locate a paragraph he thinks he saw at an indefinite time, a few months or even a few days ago, can testify. If one has hunted through a file of papers for an extract he can appreciate the difficulty and will probably wish he had saved the scrap.

"One can make a collection of his specialty or can make a general collection of any material he thinks would be useful in the future. He can include his own productions under their own subject headings, or he can include them all in one volume marked 'Personal.' A literary man should bear in mind that he may one day become famous, in which case a collection of all the fugitive pieces he has ever had in print might prove valuable as well as interesting. While there is no limit to the subjects on which one may collect scraps, every one must be his own judge as to how large his collection should be, and what range of subjects he will require, but, in any case, a thorough arrangement of the material by subjects will obviate any necessity of an index. If thoroughly classified in this way, the collection will be its own index, and there is no other way, so far as can be seen at present, that would be so effective. There are other libraries beside the Brooklyn that have some scrap collections. Some college libraries have collections covering the history of their institution from the start."

Mount St. Elias promises to be the future mountain climbing center of this country. A traveler who has returned from there, after failing to ascend to the summit, reports that his party, after surmounting great difficulties, reached a height of 11,500 feet, and were then compelled to abandon the enterprise. The ascent was covered with ice mounds, strewn with bowlders. The party were at one time knee deep in snow, and at another were wading through icy waters fed by glaciers. He believes the mountain cannot be ascended without the assistance of trained Swiss mountaineers. The packers with the party could not climb.—Chicago Herald.

THE LITTLE PEOPLE.

A Small Boy's Anxiety Not to Know Everything.

A gentleman once saw a boy peeling the bark from one of his choice trees with a hatchet. The gentleman tried to catch the boy, but the latter was too quick for him, so the farmer changed his tactics. "Come here, my little son," he said, in a soft, flute like voice with counterfeited friendliness, "come here to me a minute. I want to tell you something." "Not yet," replied the recipient, "little boys like me don't need to know everything."—Texas Siftings.

The Wiggles of Wakefulness.

Some expressions are all the more forcible for having sprung spontaneously into existence without the fostering aid of grammar. Lillian had an uncomfortable way of waking before light, and expecting the family to rise with her at what they considered an unbearably early hour.

"Lillian, you must lie still and try to sleep," said her mother one morning, when this early bird began to chirp.

"I'll try," said the child, and so she did, but it was to no purpose. In five minutes she was sitting up in bed playing with her little pink toes. This time her mother, growing impatient, as sleepy people have been known to do, summarily extinguished her under the bedclothes, saying, in despair: "Lillian, I told you to try once more to go to sleep?"

"I know it, mamma," said truthful Lillian, "and I did try, but the wake wiggles in me so I can't keep still!"—Youth's Companion.

Another Daniel Solution.

Willie is a little Scotch boy who lives in Glasgow. He is 5 years old, and has not yet learned to like "pease brose," which in his country is given to children to cool the blood.

"Go on, Willie, you must eat it," said his papa one day at breakfast.

"But I don't like it, dada," replied the boy.

"That doesn't matter; you must eat it. It will do you good and make you fat like Daniel, who lived on it when he was a boy."

"Did he? Was that the man who was in the den of lions?"

"Yes, that was the man."

"Well, then," replied the lad, scornfully, "I don't wonder the lions didn't eat him."

The smell of pease brose is not by any means pleasant.—Harper's Young People

Ways and Means.

A little boy, Gussie, where I live, has an aunt who goes away in summer and lives with him in winter. She was coming back, but the room she used to have I have now. One day he asked me if my husband would feel bad if I should die. I told him I thought he would. Then he asked me if I would feel bad if my husband died. I told him I would. He thought a few minutes. Then he said: "Well, if God would take the both of you Aunt Delia could have the room."—Boston Globe.

Fell Off the Train.

Railroad Man—Are you badly hurt, sir?

Victim—Hurt; naw! Do you suppose I've practiced tobogganing for nothing?—New York Sun.

The Way of the Wise.

"It is greatly to be regretted," was remarked in the hearing of an Illinois farmer, "that farmers' boys do not stick to the farm. It seems as if scarcely any of them do."

"Oh, I dunno," said the farmer. "I've raised eight boys and they're all farmers 'cept one."

"Is that so? Only one of them caught by the glitter of the city, eh?"

"Yes, that's all. Poor Bob would go, spite of all I could do—run away to the city when he was 12, and we ain't never seen him since, though it's been over twenty year. But I dunno but it's all right; he hadn't no likin' for farm work, nor wouldn't take no interest in it. He jes' naturally seemed to hate the farm and didn't know enough about farm work to drive ducks to water."

"Yes, I think it was better that he should leave the farm, as he evidently had no taste for it. Is he in the mercantile business?"

"Oh, no, nothing of the kind," replied the farmer; "no; for the last ten years Bob has been editor of an agricultural paper. He writes most all of the 'Hints to Farmers,' 'How to Do Farm Work,' 'Stick to the Farm, Boys,' and such things."—Fred Carruth in Chicago Tribune.

Every Man to His Taste.

Chicago Man (at a union depot)—So you are moving to Chicago, eh?

Philadelphia Man—Yes, I am tired being swindled, and have made up my mind to settle in Chicago, where I can get my Pennsylvania coal cheap.

Chicago Man—I am moving to Philadelphia. My health is not very good, and I want to live where I can get the best quality of western beef cheap.—Omaha World.

A Little Mixed.

A youth from the rural regions, with his pants at half mast, and evidently suffering from malaria, called at one of our village stores the past week for a box of queen-ann pills and a small bottle of pneumonia.—Connecticut Valley Advertiser.

Between the Kisses.

Miss McCusker (of Cincinnati)—I'm so glad to see you, dear. And just in time for the party, too.

Miss Hinckley (of New York)—I'm afraid I'm too tired to dissipate much.

Miss McCusker—That isn't dissipation chere amie. Papa's invited several people you'll like, to go over to the factory and see them pack pork to-morrow.—Tid Bits.

PLAGUES OF EGYPT.

The Effects of a Dry, Dusty Atmosphere.

PERTINACITY OF THE EGYPTIAN FLY.

Incessant Demand for Backshish.—A Bed Among the Fleas.

I am writing this at "Cook's Luxor hotel," as good a house as one could wish. A large, rambling building in a fine garden running down to the river It is embowered in noble palms and flowering trees and shrubs, and would be a charming retreat anywhere, but here surrounded by the hot mud hovels which make up an Egyptian village, with the burning sands and sterile mountains close by, it is simply delightful We are the only occupants, have the whole house, do what we please, and shall leave it with regret Invalids in search of health could spend a month or two here not only delightfully, but in this wondrously dry atmosphere most advantageously in many classes of complaints I need state only three facts to show the rapidity of evaporation in Upper Egypt Water too warm to drink is put into a porous jar and placed in the wind, though in the sun, in a half hour it is as cool as good spring water At night, exposed to a breeze, even when the breeze is rather warm, before morning it becomes almost ice cold. The night of my arrival here I took a pouring bath on a balcony The wind was balmy, but fresh The rapid evaporation so chilled me that I could not stay out long enough for my bath At the foot of the cataract we took a swim in the Nile We wore our underclothes for bathing suits We hung them up before our staterooms to dry In ten minutes they were dry enough to be worn We have all heard of the universal habit of all Africans to anoint themselves with oil, and travelers speak of it as a nasty habit. It is, however, necessary in very hot and very dry climates to prevent the cracking of the skin An English officer told me that during the hot winds on the Upper Nile his hands and face chapped worse than they ever did in a cold climate—chapped even to bleeding badly

I have found fresh white butter quite as pleasant on my hands as on my toast The boys have felt no inconvenience from the winds My hands are very sensitive to the effect of a dry, dusty atmosphere At Assouan we were in the sun during two days We did not use our umbrellas, our pith hats being quite comfortable, and yet we were just on the edge of the tropics It has been rather too chilly to lie down on the top of our little steamer for any considerable time at night. We have had no musquito curtains on our boat, and have needed none, the breeze on the water making them unnecessary It takes a hard blow, however, to keep flies away The pertinacity of an Egyptian fly is beyond that of any other living creature The natives never brush them away They deem it bad luck to do so Flies are never driven from a baby's face, and it does not seem annoyed by them. Its face is rarely washed, and is so dirty that it affords admirable forage ground for hundreds of the little brutes

I watched a child of about 2 1-2 years enjoying a crust of bread There was about it a swarm of flies, and I do not exaggerate when I say two or three dozens were on its face at one time in patches as big as a half dollar about the eyes and mouth It would screw up its eyes when they threatened to go in. I thought some must have gone into its mouth with the bread It did not seem at all annoyed I saw a sleeping child on the street whose face was almost black with the insects It smiled as if angels were whispering in its ears I have seen men talking pleasantly together while a dozen flies would be promenading about their faces, apparently unnoticed by the owners of the faces I asked a man how he could stand it. "Mashallah! They don't bother me," was his reply This has made the fly bold and he seems utterly unable to understand what a foreigner means when he tries to drive him off He has, too, remarkably prehensile claws, and keeps them keen and sharp when taking constitutional walks over European countenances It was probably the knowledge of this quality which made these people pronounce it bad luck to drive them away They found it best to educate the masses to bear the infliction and so get used to it.

By the way, travelers are shocked by the incessant demand for backshish (gifts) throughout the mighty east. The thing is not to be wondered at, for all the beggars the world over knew there are none equal to the gods of the east Their hands are everywhere represented extended for backshish Their favor was won by offerings—their anger averted by sacrifices Like the proboscis of a celebrated elephant, their hands could pick up a pin or carry off a cart load of potatoes They could make a lunch from a few grains of rice, the widow's mite, or they could devour a hecatomb of bullocks, the gifts of a prince The gods took gifts and demanded them The great and powerful, profiting by their example, took gifts and enforced the giving The poor took gifts and begged for them The well to do in the whole region of the early sun reach out the hand for commission. The poor clamor like hungry curs for crumbs and bones, and are not ashamed of their clamor.

I fear what I have said about Upper Egypt looks too much as if I was seeing it through rose glasses Thirty six years ago, when Bayard Taylor and I traveled in the east together, I suffered terribly from fleas The only pun I remember him to have made was anent the little tormentor He said Homer wrote the "Iliad," Virgil the "Æneid," that if I ever wrote an epic it would be the "Flead." I had hoped we were about to escape this Egyptian plague, but yesterday, after lunching in one of the old tombs of the kings, we lay down for a nap on the sands; but my donkey boy, desiring to please the old man, whom he flatters by calling his "father," spread the blanket and saddle for me to have a nice siesta Ah! moment of mad forgetfulness I slept an hour, but the Nemesis came This particular tomb is now called the "lunch tomb" Hundreds have lunched in it this season, though it is where no living thing is seen, and apparently nothing can live, yet the sanded floor was full of my mortal enemies, brought to it by the many donkey boys, who in its shade rest while their employers are wandering among the mighty caves of the dead I have passed a good part of my time since then as a hen with one chick does in an empty chicken yard—scratching I am like certain officials not far from the old court house in Chicago—only more so They have itching palms. I am all palm I itch all over and am raw in patches.—Ex-Mayor Carter H. Harrison's Thebes Letter in Chicago Times.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY FEBRUARY 13 ..... 1891.

The total number of Indians living in California, as found by the census is 15,283. The Indians of California are more self sustaining than those of any other State or Territory.

A good deal of time has been occupied by members of the Legislature in investigating the Mayor of Oakland and other parties for not bribing them. The matter was not stated in this form but that is what is meant.

Herod may have been a wise Statesman instead of a cruel tyrant. If a sure selection could be made it would be a blessing to the world to choke the life out of swarms of males who come into it and grow up to vicious villains, or hardly less dangerous and stupid blockheads.

"For evil is wrought by want of thought,
As well as want of heart."

It appears that the German Emperor considers himself the best qualified successor to Von Moltke as Commander of the German army. When a certain Irishman was asked if he could play the fiddle he replied: "Begorra, I may be as good a fiddler as in the world for anything I know to the contrary, because, you see, I never tried." It is much the same with the Emperor as a general.

There is frequent mention of the name of Robert T. Lincoln as the next Republican candidate for President. Most nominations are the result of bargains and intrigues among politicians who care only for their own corrupt and selfish ends. But the nomination of Mr. Lincoln would have the hearty approval of all Republicans who are patriots more than partizans. Robert T. Lincoln has inherited the unerring good sense and the honesty of purpose that were the leading traits in the character of his immortal father.

Nevada appears to be going from bad to worse steadily. The Austin "Advocate" says: "The situation of affairs in Nevada is deplorable and if any hope is to be taken we fail to see from whence it is to come. The signs point to our present Legislature ignoring everything that might be of special benefit to our people. From time to time we hope for a better state of affairs to be brought about by those in authority, only to be doomed to disappointment. Nevada has become historic as the "rotten borough," and be it a shame! Nevertheless, is she not entitled to the name?" These are hard things for a paper to say of its own State.

It is proposed that the State shall employ a well paid agent to secure good berths for all criminals discharged from State prisons. The expense would be considerable, but it could be provided for by levying a special tax on every decent working man who prefers not to commit crime that would send him to State prison. Another proposition is to use part of one of the State Asylums for the Insane as a home for drunkards. Philanthropy runs mad when it proposes to nurse and caudle vice and crime at the expense of virtue and honest industry.

It would appear that the whole Pacific Coast might just as well have no representation in Congress for any good our Senators and Congressmen are doing us. It is well enough known the grand results that would follow if Congress would give even moderate assistance in the promotion of irrigation works; yet Congress gives eight hundred thousand dollars to pay Mr. Powell and his assistants for making topographical surveys, and refuses to give one dollar for irrigation. Expert testimony shows that Powell's work cannot be completed in ten years, but the appropriation will go on just the same. Doubtless the reports of these surveys will be very interesting to scientific men, but the generation now living will have passed away before they will be of any practical use. If topographical surveys had been waited for before building railroads, there would not yet be a mile of rails laid west of the Allegheny Mountains. Practical men built the railroads that have filled the continent with inhabitants from the Alleghenies to the Pacific. Irrigation works can be built quite as readily and the results would be as benificent.

A young lady in a far western state recently sent the following inquiry to some one in Washington: "Will you inform me where the navy of the United States is, and how many men do they keep there, and what else do they keep there, and what do they keep them for? Do the men-of-war stay there? How many guns, cannons and shells do they keep there, and what do they keep them for?"

PUBLIC NOTICE

Is hereby given that unless the foregoing taxes and costs are paid I will on

TUESDAY,

The 24th Day of February, 1891,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 20th day of January, A. D. 1891.

J. S. GORMAN,
Tax-Collector of Inyo county, California.

ASSESSMENT NOTICE.

INYO MARBLE COMPANY.

Location of principal place of business, San Francisco, California. Location of works, Inyo county, Cal.

NOTICE IS HEREBY GIVEN THAT AT A meeting of the Board of Directors, held the 16th day of December, 1890, an assessment (No. 11) of Ten Cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, No. 132 California street, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 30 h day of January 1891 will be delinquent and advertised for sale at public auction; and unless payment is made before, will be sold on FRIDAY, the 20th day of February 1891 to pay the delinquent assessment together with costs of advertising and expenses of sale. By order of the Board of Directors.

G. W. LUCE, Secretary.

Office, 135 California St., San Francisco, California.

COURT NOTES.

Geo. M. Gill, Superior Judge.

MONDAY, February 9th.

Stacker vs. Fife—Filed Summons.

Estate of Wm. Walker, deceased—Filed Inventory and Appraisement.

Estate of John Mullane, deceased—Filed will. Issued Letters Testamentary to Richard Hessian, Sr. Will admitted to probate and Appraisers appointed.

Estate of C. D. Begole, deceased—Order setting aside Inventory and Appraisement.

Diaz vs. Rhine—Filed Demurrer to amended Complaint.

Broder vs. Conklin—Filed three notices to strike out cost bill. Filed notice of motion to strike out and set aside Judgment.

Estate of John B. White vs. Jere Fitzgerald—Judgment entered.

Mr. A. K. Eugley was down from Big Pine last Monday.

Mr. and Mrs. J. R. Moffett were in town a few days this week.

Mrs. Lotta Brown of Olancha is suffering from an attack of pneumonia.

Catfish in large quantities are now being caught in the river up about Black Rock.

Mr. J. C. Eldy is recovering from his recent severe illness. He is now able to walk about a little.

Given and Ingalls have sold their stock of goods at Bishop to A. Cohn & Co., and have closed up their business.

County Treasurer Moore has received the State appropriation of school money for Inyo County. The amount is $5,112 10

Rev. G. De La Mayr and Mr. W. T. Bunney came down from Bishop on Thursday. They left town for home this afternoon.

Mr. Richard Hessian was down from Big Pine at the beginning of the week. He made probate on the will of the late John Mullane.

J. W. P. Laird and P. H. Mack went to Bishop on Wednesday to attend law business. Mr. Laird intends going on to Sacramento from Bishop.

Men are busy about Independence pruning fruit and shade trees and making preparation for the new life of spring which is becoming more vigorous every day.

Mining business is reported booming at Benton. A good deal of ore is being shipped to San Francisco, and arrangements are being made to work several new mines.

Neil McLean came to Independence at the beginning of the week with a ten horse team for grain to take to Darwin. He reports mining matters very quiet at present out that way.

There is reported to be very little probability of any work being done at present on the proposed canal to Salt Wells Valley. Everybody in Owens Valley would be very glad to see it carried to a successful termination.

A good deal of ore is being taken out of the old workings of the Union mine at Cerro Gordo. In the flush times this ore was cast aside as being of too little value to ship, but now that a railroad affords cheap transportation it pays very well to ship it to San Francisco.

Last week Sheriff Borgwardt searched the prisoners confined in jail at Bakersfield. He found keys partly made and files and other evidence that the prisoners were nearly ready for a desperate attempt at escape. Among the lot are three men accused of attempting to rob the Treasurer of Kern County.

The grade of the new road from Frisco, Utah, to Pioche, Nevada, is completed and it is expected that track laying will commence about March 1st. This is a branch of the Union Pacific and is certain to be extended into Inyo county and on to the ocean some time, but that time is not certain.

An epidemic of pneumonia is reported at Candelaria. On Tuesday twenty-two people were ill; several deaths have occurred, among others a young man named Tom McPherson, a former resident of Owens Valley. A special train was sent to Carson for more medical help. The long continued dry cold weather is perhaps the cause of trouble.

A long standing dispute between the Comstock mining companies and the Sutro Tunnel company has been settled. A reduction of the royalty paid to the Tunnel company has been agreed upon. On ore averaging $14 per ton the royalty will now be 56 cents instead of $1 per ton and on $10 ore the rate will now be 40 cents per ton. All other expenses are to be reduced so as to admit of working large bodies of low-grade ore.

Paul Bennett, an old time citizen of Independence, is now District Attorney of San Joaquin County. He is determined that there shall be no trifling with the county funds. In counting the money in the Treasury at the beginning of the present month he found a certificate of deposit on a Stockton bank for a quarter of a million dollars. Paul is of the opinion that the County Treasurer has no authority for letting anybody have the use of the county funds and refused to go on with the count till the coin should be put back where it belongs in the County Treasury.

What Business Men Say.

Business men in Inyo county say that they find money getting scarcer all the time. The chief export from the Valley is ore and the total shipments from the county during the past year is estimated not to exceed, at the utmost, equal to forty dollars per capita of population. Farm produce of any kind cannot be exported beyond one or two of the nearest mining camps in Nevada. A few horses have been sold out of the county during the past year, but these sources of income would not increase the net rate per capita to any material extent. The freight on general merchandise and farm implements and machinery is about sixty dollars per ton from San Francisco, and with such crushing odds against them the farmers cannot make their business pay. One of the best men in the county told the editor of this paper some time ago that he had found by experience that every dollar's worth he had sold from his land, whether farm produce or live stock, had cost him a dollar and a half to produce it, and he had quit trying to produce anything to sell. Till these conditions shall widely change there will be very little increase of population or of business.

Interrupted Festivities.

On Wednesday Pat Flynn had several of his countrymen taking dinner with him. The occasion was celebrating a national holiday. Before the dinner was served the whole company had indulged in a few drinks each, and when they sat down to eat all were in a lively mood. One young man, in particular, was very frisky and making considerable noise. Pat told him to be quiet or the neighbors would be making uncomplimentary remarks about the company. The young fellow swore by the queue of Confucius or some other oath equally terrible to Chinamen that he would make all the noise he pleased and would clean out the shebang besides. He whipped out a knife and was going to carve Pat at once, but was seized by some of the other Chinamen and disarmed. Sheriff Gorman arrested the disturber of the festivities and lodged him in jail. Next day he was fined for his bad conduct. Drink makes ferocious beasts of Chinamen.

An Indian School.

Some time ago the Department at Washington made a proposition to the people of Big Pine to buy the school house there for the purpose of starting an Indian school. Last Saturday the citizens of Big Pine held a meeting to consider the matter, and it was decided with but one dissenting vote to sell the school house. This makes it almost a certainty that the Government will start an Indian school at Big Pine. So far as known the Indians at Big Pine are the only people of their race who ever employed a teacher to conduct a school for their own children. Last summer they contributed enough from their own scanty earnings to pay Miss Turner for teaching four months. On this fact becoming known at Washington, steps were taken towards founding a school by the Government. Miss Turner and one of her sisters are now in the Indian school at Carson preparing for greater usefulness at Big Pine.

Almost Forgotten

Our young people appear to be almost entirely ignorant of the fact that to-morrow is St. Valentine's day. Americans have less of the pleasures of old customs, with all of the sweet sentiment and tender feelings connected with them, than any other people on earth. Sentiment is studiously cultivated out of the minds of the young, and they are trained to value, and aim to possess, only material things. The dollar is lifted up as Moses lifted up the serpent in the wilderness, and when the eyes of the young are turned to it they see the image of a young woman who loves good eating, and whose other pleasures would be of anything but a sentimental kind.

Avoid Misery, Stay Away.

The rumor that deep mining would be be resumed on the Comstock has drawn many men there seeking employment. The *Enterprise* says there are four hundred idle miners and mechanics, all of them accustomed to work at the Comstock mines, and when help is needed these will be taken before strangers. There is nothing more than rumor to warrant the belief that deep mining will be resumed, and if it is not intended by the leaders in control, J. L. Flood and others who are credited by the daily press with saying it would, they should immediately deny ever giving expression to any such intention. They have no right to deceive and cause misery and disappointment by inducing poor people to come to Virginia and spend their all in the hope of getting work. San Francisco newspaper men are utterly irresponsible.

Sheep License Collector.

Last week a petition was circulated in town and numerously signed, asking that W. P. Yaney be appointed special tax collector for the sheep license tax. Mr. Yaney has written a letter saying that he would not accept the office if offered him. Mr. J. R. Moffett has collected the sheep license tax during the past two years and has done the work well. The location of his home gives him advantage for the collection of the tax that no other man posesses, and his intimate knowledge of the business is another qualification that fits him for the work. It is understood that he would be willing to do the work for the coming season.

The Torment Continued.

Sheriff Gorman has already received and served twenty-three subpoenas upon witnesses to appear at Bakersfield on the 20th inst. at another trial of Elliott. The Old Man of the Sea upon the shoulders of Sinbad was but a trifle compared to the load Elliott is upon the people of Inyo. As the vulture tore the liver of Prometheus, so with us, we only get a breathing spell, and the insatiable brute takes a wickeder bite, fastens his claws deeper in us and tears us with greater ferocity.

A Mining Rumor.

The *Chloride Belt*, published at Candelaria, says it is reported that Boston parties are about to examine the Montezuma mines with a view to buying them. The mines are in the Inyo range about twenty miles north of Independence. Considerable ore was taken out formerly, but since the furnace at Eina was burned about six years ago, nothing has been done. The mines are about a mile and a half distant from the C & C railroad.

To Seek Relief.

Last week the Supervisors ordered an appropriation of $250 to be paid to Mr. J. W. P. Laird. Mr. Laird agrees to go to Sacramento and endeavor to have the Legislature make an appropriation in favor of Inyo County as a relief from the heavy expense of the repeated trials of Elliott at Bakersfield. Mr. Laird intends leaving Bishop Creek to-morrow morning for Sacramento.

Dismissal Asked For

Yesterday District Attorney Forbes telegraphed to the District Attorney of Kern County, asking him to go into Court and request, in the name of the people of Inyo County, that the Elliott case be dismissed. The Supervisors last week adopted a resolution that this request be made, but failed to instruct anyone to forward the request to Bakersfield. The District Attorney therefore took the responsibility upon himself in order to save the county more useless expense in this case. This will end the wretched case, so far as the people of Inyo are concerned, except the payment of great expense already incurred.

BAKERSFIELD, Feb. 12.—To P. W. Forbes Esq.—Will dismiss at 2 o'clock this p. m.
ALVIN FAY.

Scarcity of Fruit in France.

French journals lament that unfavorable weather has almost altogether deprived the country of fruit this year. A disastrous amount of rain has so afflicted the central, northern, western and southwestern districts that the markets have been almost bare of fruit except such as had come from the south. One correspondent, writing from the department of the Seine-et-Marne, says: "We have had neither cherries nor apricots nor plums; apples have been greatly injured by hail; pears have suffered less, but our grapes will not ripen."

And another, writing from Brittany, says that there the pears are all spoiled, apples are lacking in many localities, and almost all the plums had perished; that peaches are everywhere non-existent; that gooseberries and raspberries had been relatively scanty, and that, although strawberries had been quite plentiful, they "had only the form of the fruit with the taste of water." Meanwhile the complaints of excessive drought have been coming in from the south, where we are told even in the carefully watered gardens the trees and shrubs had faded and withered. Near the coast the moist sea breezes "assure the abundance of the grape crop," but further north the grape growers are reported to be in despair over the persistent dryness.

MISCELLANEOUS.

NOTICE TO CREDITORS.

Estate of John Mullane, deceased.

Notice is hereby given by the undersigned, Executor of the last Will and Testament of John Mullane, deceased, to the Creditors of and all persons having claims against the said deceased, to exhibit them with the necessary vouchers, within four months after the first publication of this notice to the said Executor, at his residence near the town of Big Pine, the same being the place for the transaction of the business of said estate, in the County of Inyo, State of California.

RICHARD HESSIAN,
Executor of the last Will and Testament of John Mullane, deceased.
Dated February 13, 1891.

REGULAR MEETING OF BOARD OF EDUCATION.

The Regular semi-annual meeting of the Inyo County Board of Education will be held in Independence on Tuesday, February 17th, 1891 at 10 a. m. Examinations to commence on Wednesday, the 18th, at 9 a. m. All applications for examination or certificate must be in the day prior to the day of the meeting.

J. H. SHANNON
Sect. Board of Education.

PROBATE NOTICE

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Mullane, deceased.

Notice for publication of time appointed for proving will, etc.

Notice is hereby given that Monday, the 9th day of February A. D. 1891, at ten o'clock a. m. of said day, at the Court-Room of said Court, at the town of Independence, in the County of Inyo State of California, has been appointed as the time and place for proving the will of said John Mullane, deceased and for hearing the application of Richard Hessian Sr. for the issuance to him of letters testamentary thereon.

J. N. YANPELL, Clerk.
P. W. FORBES, Attorney for Petitioner.
Dated January 22d, 1891.

DELINQUENT SALE NOTICE.

Let every enfeebled woman know it! There's a medicine that'll cure her, and the proof's positive!

Here's the proof—if it doesn't do you good within reasonable time, report the fact to its makers and get your money back without a word—but you won't do it!

The remedy is Dr. Pierce's Favorite Prescription—and it has proved itself the right remedy in nearly every case of female weakness.

It is not a miracle. It won't cure everything—but it has done more to build-up tired, enfeebled and broken-down women than any other medicine known.

Where's the woman who's not ready for it? All that we've to do is to get the news to her. The medicine will do the rest.

Wanted—Women. First to know it. Second to use it. Third to be cured by it. The one comes of the other.

The seat of sick headache is not in the brain. Regulate the stomach and you cure it. Dr. Pierce's Pellets are the little regulators.

Reduced to a Skeleton by disease, and Restored to Health with Dr. Pardee's Remedy.

Wilson, Niagara Co., N. Y.

GENTLEMEN:—In April, 1883, I was prostrated by a severe attack of inflammatory rheumatism and was confined to my bed four months. I was attended by the best medical skill, but rapidly grew worse until I was reduced to a mere skeleton.

The disease had gone to my lungs and to the region of my heart and I was finally given up by the physicians, who said I could live but a few hours at most and that all they could do was to make me as easy as possible by killing the pain by frequent injections of morphine. I was finally advised by a friend to take Dr. Pardee's Rheumatic Remedy. Upon being asked as to giving it to me, the physician said "I have no faith in patent medicines, but give it to him; it will not hurt him."

I was then so near dead that my limbs were cold below the knees, and a numb sensation began to creep over my body, and I suffered with great pain in my chest and about my heart. After I had taken the first few doses I experienced more pain than before, for it seemed to drive the pain from the vital parts toward the extremities. I continued to take it according to directions. Four days after the physicion who gave me up called to see me, and said I was much better. In about four weeks I could sit up; I then gained very fast and became as well as ever. CHAS. O. BARNUM.

Brother of D. C. Barnum, Attorney, 126 Powers' Block, Rochester, to whom persons can refer.

Ask your druggist for Dr. Pardee's Remedy and take no other. Price, $1 per bottle; six bottles, $5.

Pardee Medicine Co., Rochester, N. Y.

DO NOT POISON YOUR SYSTEM with medicines you know nothing about. Nearly every so-called remedy for Rheumatism and Neuralgia now offered to the public contains powerful and poisonous medicines that injure the stomach and leave the patient worse off than before.

Do not use them, but take "the old reliable" one that has stood the test for twenty-five years. One that is free from anything injurious to the system, composed wholly of roots and herbs, the medical properties of which are particularly adapted to blood diseases.

Dr. Pardee's Remedy is safe and effective. Can be used by both old and young with beneficial results. Five hundred dollars will be paid for any case where the use of Dr. Pardee's Remedy has in any way injured the patient.

THE BELFRY CHIMES.

Hark! a merry peal we're ringing,
With joyous clash we cleave the air,
God's peace and blessing gayly flinging,
O'er a happy bridal pair
Slowly down the aisle they're passing,
Proudly 'neath the archway gay,
Far above sweet music's crashing—
Heed the warning now we say.
Time for sorrow, time for song—
Comes and goes the fleeting breath;
Time for sorrow, time for song—
Life today, to-morrow death.

Now changed our note, so soft and low,
As they turn the burial sod,
And bowed the mourners weeping go,
For a soul returned to God.
With muffled sob we clang so slowly,
As round the grave they kneel and pray,
And mingled with those words so holy,
Sad our warning still we say:
Time for sorrow, time for song—
Comes and goes the fleeting breath;
Time for sorrow, time for song—
Life today, to-morrow death.

—John Muir in Harper's Magazine.

THE LOVE OF A DAY.

I.

"Well, Jack," observed Mr. Mortimore Wellden, as he found himself on the stoop of his charming country residence upon the Hudson, "where are you going to spend your holidays? Europe, I guess?"

"Not a bit of it, father. I want to do my own dear land first. Just think of all there is to see here."

"We ain't fashionable, Jack."

"If you go that, sir, all the English swells consider it correct form, as they call it, to run over here. I tell you I was heartily ashamed of myself when that nice young fellow, Sir Henry Harden, asked my opinion about the distances in the Yellowstone Park. I was nearly sneak enough to pretend to know, although I was never within 2,000 miles of the place. No, father, America first, say I."

"Spoken like a young American eagle," laughed the elder man, with a sparkle in his eye that indicated the pride that every true son of the Stars and Stripes fondles in his heart's core.

Mr. Mortimore Wellden is a banker, and a very wealthy one. His word is his bond, and his dicta among moneyed men are regarded as law. His wife is one of those bustling women who "toil, and spin, and scold the maids," as did her grandmother, a Randolph of Virginia, a hundred years ago.

There are two children, a daughter, Mildred, aged 17, who is to come out at the first Patriarch's ball of next season, and Jack, a partner in the bank, aged 23 years.

Jack graduated at Harvard, and was stroke in the University race. He is a trifle over six feet, built in proportion, and the owner of a pair of laughing blue eyes, and thirty-two magnificent teeth that flash beneath his tawny mustache.

Instead of dreading the "dreary drudgery of the desk's dead wood," Jack plunged into banking with the ardor with which he took to boating, and is now not only his father's secretary and partner, but his counselor as well.

Jack has never cared for female society. He of course attended balls and receptions, and every species of entertainment that fashionable society exults in, but he prefers his book and his pipe, his dog and his gun, and his spoilt sister to all the giddy dissipations of the "madding crowd."

It was a broiling July day of last year that this conversation between father and son took place, and two weeks later found Jack Wellden at the Profile house in the White mountains, on a tramp after the most approved fashion. He wore a dust colored check knickerbocker suit, with big gaiters and a deerstalker's cap. His impedimenta, or baggage, consisted of a knapsack and alpenstock and a field glass of great power. He was alone, and least lonely when most alone.

A valise laden with conventional garments awaited him at such hotels along his route as pleased his imperial majesty to regard in the light of temporary headquarters, for his mother on kissing him au revoir uttered these solemn words:

"Jack, never, never be without your evening dress suit."

Jack had made the Profile house his headquarters for a week, debouching from it to various romantic passes and notches only accessible to those lithe of limb and brawny of muscle. Instead of joining in the lawn tennis or the hops he used to sit for hours on the piazza, his pipe in his mouth, watching the comers and goers, the tourists of all sorts and conditions that passed merrily on their way.

It must be told, but in the strictest confidence, that Jack meditated a book, and he had even chuckled over the title, "Jack Minus Jill," but fate willed that the book should remain unwritten.

II.

Jack Wellden was no mere tyro as a walker. A member of the Athletic club of New York, he was a fancy man in the gymnasium, and in the Westchester Pedestrian club second to none. For a wager he walked from Highbridge to Yonkers and back within a given and what seemed an impossible time, yet he scored a victory with several minutes to spare.

Mountain climbing was his delight, and to be out in the early dawn, up in the silver mists that crown the summit of inaccessible crags, to the youthful banker was nearer heaven than anything that earth could give him.

The notches around the Profile mountain are as numerous as they are inaccessible. No mere two weeks' holiday young man need attempt them; they mean collar work from the word "go," and take more out of a man than an ascent of the Matterhorn or Mont Blanc. Jack found the hotel crowded from cellar to garret, but, having had his baggage sent on in advance, the clerk, on account of the expensive appearance of the solid leather, nickel plated valise, discovered that one room still remained open to the owner, and young Wellden was comfortably stowed away.

His appearance in the dining room created a tremor in the heart of one young lady's mamma, a certain Mrs. Pomroy De Smythe, hailing from the classic regions of Back Bay Boston.

"Addie," she whispered to her daughter, "sit up straight, love, bite your lips a little, put on an English stare, for I see young Wellden, the banker, has arrived, and he's eligible, you know."

Miss De Smythe most willingly executed the commands of the general, her mother, and as Jack was passing the old lady threw out her grappling irons.

"Mr. Wellden, who would have imagined that you would be found in this out of the way place? Addie, darling, don't you see Mr. Wellden? That dear child is such a dreamer."

Jack bowed to Addie, and after a commonplace remark was for passing down to an unoccupied table in a remote corner of the room, but Mrs. Pomroy De Smythe insisted upon his taking a seat at the table facing Addie, and as a consequence a pair of very dreamy eyes and a general undefined expression of love and undefined languor. Wishing both ladies in Jericho, the unwilling Wellden submitted to his fate.

"It will be only for a couple of days," he said to himself; "and I need not be at all punctual."

Mrs. Pomroy De Smythe was acquainted with Jack's mother. Mrs. De Smythe was a Vane, one of the Mayflower Vanes, and gave no quarter to plebeian blood.

"There is an awful mixture of people here, Mr. Wellden," she said. "Your dear mother couldn't, wouldn't stand it. There are only two parties we can know, one of them only in a hotel way. How are all the rosebuds of New York? I presume you have committed sad havoc this season?"

"Not I," said Jack, honestly. "I am not in that line at all."

"Did you not admire some one of the debutantes? Come now, Addie, why don't you cross-examine Mr. Wellden?"

Addie gazed into his eyes, and poor Jack, who was not accustomed to such manœuvering, blushed up to and inside the roots of his hair.

"I assure you," he stammered, "I really don't go in for ladies' society, and," he gallantly added, "I admire them all so much that I could not possibly make a selection."

"I like that," laughed Addie, her eyes plunged into his. "He should see Miss Winthrop, mamma, should he not?"

"Well, I don't know that she is so very much," responded Mrs. De Smythe.

"She is immensely admired by the gentlemen, mamma."

"Her money, my dear child. They say she has $100,000 a year."

When Jack Wellden was allowed to retire into a corner of the piazza to smoke his beloved pipe, he muttered, half aloud:

"How dreadfully tiresome some people are. I can't stand them. I will do the Giant's Toe to-morrow, and go out into the woods on Thursday

III.

It was after the biggest morning's work of his life, in the way of climbing, that Jack Wellden found himself once more in the region of the woods. The road was scarcely worthy of the name. It was more a sheep track through a tree shaded line, the grass resembling green velvet.

"What would I give for a hunch of bread and a glass of beer?" he thought, as he trudged along. "Perhaps this path will bring me to a farm house where I can buy something to eat and drink."

A turn in the lane showed him a quaint little wooden gate, and beyond the gate the red roof of a house, a nest hidden away in tufted foliage, away out of the world—just the corner of the earth for a man dead in love, or a writer of romantic fiction.

As Jack pushed back the gate the sound of a girl's voice singing came to him through the green leaves and scented blossoms, and summer day hum. It was a deliciously sweet young voice—a voice for a ballad, not for scene from opera, and he stopped to listen. The song was "Some Day." When she had concluded, he obeyed an imperative impulse, and crying "Brava" strode into her presence. On a rude stone seat beneath overhanging oaken boughs, and close to an open door revealing a kitchen such as Cinderella might have prepared for the amorous prince, sat a girl with hair of the purest gold, with which a stray sunbeam was mercilessly coquetting. She was petite, but exquisitely molded, and was not beautiful by any means. Her bluish gray eyes were half concealed beneath black lashes that swept down her cheek, and in the glorious expression of those eyes lay the charm that recognizes no limit. Her nose was inclined to what Tennyson terms tip tilted, and if her teeth were dazzling white, one or two were deliciously irregular, while the rich red lips, if a trifle too full, were absolutely young, and fresh, and charming.

She was attired in a lilac and white striped, short skirted muslin, crisp from the laundry, while a snowy waist of white, with a rolling collar gathered together by a lilac bow, completed a simple yet most becoming toilette. Her little feet were enshrined in low shoes, lilac and white striped stockings showing over them.

Instead of being abashed at the unexpected appearance of a stranger entering after so brusque a fashion, and in such a remote corner, this rustic maiden, who was by the way engaged in the very useful if not romantic task of hulling peas, preserved so dignified a self possession as to thoroughly abash the intruder, who blurted out: "I—ah—beg your pardon—I—ah—that is"—— then he stopped short.

The rustic lass, while continuing the hulling of the peas, and who seemed amused at his embarrassment, demurely asked:

"Are you looking for Mr. Stephen?"

"No, no. The fact is I have been to the top of the Giant's Toe and"——

"To the top of the Giant's Toe?" exclaimed the girl, gazing up at the peak which towered above them in peerless majesty. "Why that has never been done but twice."

"Thrice."

"Twice, they say here."

"Thrice, I now say," he laughed. "I make a bad third. I am shamefully hungry and thirsty, and I thought I might get a crust and a glass of beer."

She looked at him in a quiet, searching way.

"You can have both."

"I am intensely obliged; but pray, do not disturb yourself. I"——

She had disappeared into the kitchen ere he had finished what he wanted to say, reappearing with wondrous celerity, carrying a wooden platter containing bread and butter, and, rapture! a quaint earthen flagon, with a metal top, containing a goodly measure of beer. Jack's thirst got the better of his manners, and almost without thanking the fair waitress, he put the flagon to his mouth and fairly drained it.

"You were thirsty," laughed the girl.

"Wasn't I, though!"

"Would you like some more?"

"Not just yet, thank you. May I sit down?"

She motioned with her golden head to a pile of wood that lay close at hand against an upright wooden post, and Jack planted himself.

"May I smoke?"

The girl nodded. After he had lighted up she gravely asked him:

"What brought you here to this place?"

"Accident, pure and simple."

"Did you hear of it?"

"Of what?"

"Of this cottage?"

"Not a word. I came from New York. I am a bank clerk out for a holiday." As he afterward said, "I did not want to dazzle a girl in her position with my partnership and prospects!"

"I think you are telling me the truth," she said.

"Very close to it," he chimed in, with a hearty laugh, adding: "You live here all the year?"

"Nearly—at least as much as I can." And as if wishing to change the subject: "Do you get a long holiday?"

"Not very."

"It seems a nice way of spending it, then. Better, I mean, than lounging on hotel piazzas."

"Oh, I detest them," and the young fellow, without being aware of it, spread out his idea to the sun.

The girl listened with evident pleasure.

"Can't I help you to hull those peas? I ought to do something for my bread," he laughed.

There was so much of the genial courtesy and youthful frankness in the way he made the offer that the girl exclaimed:

"I think you had better. I shall never have them done in time."

Jack proved himself an expert, and was very, very sorry when his task was ended.

"Good day to you," said the girl, gathering up her dish of peas.

IV.

Upon the following noon, Jack Wellden, with a very handsome photograph album, presented himself at the little gate, and, strange to relate, his enraptured ear was greeted by the delicious voice of the hostess of the day before. On that occasion, however, she was not engaged in hulling peas, but in spinning at a quaint old spinning wheel, such as might have been the valued property of her great-grandmother.

"Oh, you again!" she laughed.

"Yes, I thought you would like some photos of the Giant's Toe, so I brought them for you."

"They are beautiful," she exclaimed, as she glanced over them, "but you did wrong."

"I am very sorry."

"I'll take one."

"That's for the bread, and another for the beer," laughed Jack.

These two young people got on so well together, that the time slipped past, and the spinning wheel was woefully neglected.

"This will never do," suddenly cried the girl, leaping to her feet. "Here I have been wasting my time with an unknown gentleman, and"——

"But I"——

"But me no buts, sir, but go!" pointing dramatically to the gate.

"I'll be hanged if I do!" said Jack, resolutely. "At least," he added, "until I say what I have to say, and what I thought I would never say." And then, almost unconsciously, and obeying an emotion he was utterly unable to control, Jack Wellden laid his throbbing heart, with all its hopes and fears, at the dainty feet of this dainty little maid.

"You are mad!" was all that she said, as she rushed from him into the house.

When Jack arrived at the gate upon the following day, a strange man asked him his business. Stung to the quick—love is always sensitive—Jack, crushing down all feelings, calmly replied:

"I have none."

As he wandered aimlessly through the woods, his resolve shaped itself thus: "That girl shall be my wife. What if she be penniless, and lowly born, a violet is born very close to the earth."

Seated upon the piazza of the Profile house in a corner, out of the tide, he smoked his beloved pipe, gazing up at the moon, as is the wont of happy and unhappy lovers.

A soft voice behind him:

"Mr. Wellden?"

He turned. It is Mrs. Pomroy De Smythe.

"Where have you been hiding yourself—on the top notches or in the depths of the woods? I want you to come over to yonder group. Miss Winthrop, our Boston beauty and great catch, is with us. I wish to present you to her on your dear mother's account."

This was cruel. Jack loved to be alone, and alone he intended to remain.

"I am awfully sorry," he said, "but"—— and he placed his jaw in the hollow of his hand.

"A toothache?"

"Oh, oh!" groaned the hypocritical youth.

"I am very sorry; get some camphorated oil; put"—— And the good lady, after prescribing for him, left him to his reflections.

An hour later he felt that a five mile stroll would be better than nothing; and as he descended the steps the full glare of the electric light fell upon the face and form of a young girl whom Mrs Pomroy De Smythe was courteously assisting into a phaeton. Jack started as if he had been shot. His heart gave a wild leap backward.

"If you had been here a second sooner," exclaimed Mrs. De Smythe, "I would have presented you to Muriel Winthrop."

The presentation took place in due form a day later. Miss Winthrop, preferring the seclusion of the perfumed woods to the publicity of a hotel, had secluded herself with her chaperon at the cozy nest in which Jack Wellden had surprised her. Sick to the death of the steel lined conventionalities surrounding her and her enormous fortune, the girl lived her own life in this charming nook, and was all the healthier and the happier.

Of course, they are engaged. How could it be otherwise? They are to be married next month, and the honeymoon is to be spent in that out of the way spot where Jack Wellden discovered Muriel Winthrop occupied in hulling peas.—Francis Lee in Once a Week.

Saving His Books.

There is a story told on Hon. H. G. Struve which has not as yet been made public property. It is said that during the raging of the great fire, in which Mr. Struve with all the rest of Seattle was a heavy loser, he rushed up into his office to save some of his most valuable books. It is well known that he had accumulated a vast amount of material, which he purposed working up into a history of Washington. This material and some of his books were very precious to him. So as the fire came sweeping down toward his office he rushed up stairs and began to select the books most valuable.

"Ah, this one I will save. No, I guess this one is more valuable." Thus he hesitated, and among his many books, all of which were dear to him, he was unable to decide which ones to save. Just then the cries of firemen were raised, and the judge was urged to come down and save his life. Being thoroughly alarmed and still undecided, he turned and grabbed the first book in reach and rushed out of the building. Reaching the pavement he found he had saved—the city directory.—Seattle (Wash.) Press.

Care of Baby's Food.

A visit to the butters in the Babies' hospital of New York, in East Fifty-fifth street, shows the care with which every mouthful of food is prepared. There are great cans of milk, bottles of the best of baby foods, rare beef and its juices, delicious bread—everything suitable for all the different baby needs. Out in the cold room there is a large case of "postoffice boxes." Each baby has one, labeled with its name. In it is daily placed the food he or she needs, apportioned and chosen with the greatest exactness, and in bottles queerly corked with baked cotton batting. This is done because the doctors and wise men have found out a strange thing. The air we breathe is full of floating bits—germs of disease—and these cannot get through cotton batting and poison the babies' milk.—New York World.

Secretary Seward's Opinion.

I heard a story of William H. Seward the other day which I think is a new one. I am not certain, but I am impressed with a conviction that it comes from Miss Olive Risley Seward, an adopted daughter of the late Secretary Seward, whose Bohemian literary salon is one of the most charming places to which one can have the entree at the national capital. It was at the time when there was great agitation of the removal of the capital, and all Washington was alarmed. One of the scared ones said to Secretary Seward, "Mr. Seward, do you think the capital will be removed from Washington?" "Yes, I think it will," was the reply. "But where—to Chicago?" "No." "What? Not to St. Louis? Well, where then?" "To the City of Mexico. That will probably be the center of population of the United States one of these days."—Pittsburg Dispatch.

Curious and Unique Decorations.

A lady riding in an elevated train recently was attracted by the singular beauty of a hand bag carried by the lady sitting by her side. Curiosity overcame reserve before long, and she remarked upon the beauty of the bag.

"It was made from the skin of a rattlesnake," said the owner, calmly.

"How wonderfully pretty it is!" exclaimed the admirer, leaning forward to examine it more carefully. The owner looked pleased and surprised.

"You are the very first person," she said, "to whom I have told what it is that has not shrunk from it, saying, 'I don't see how you can carry it!' This was one of Barnum's big rattlesnakes. A friend of mine is employed in the circus menagerie, and when this reptile died he gave me the skin. I have a small rug made of it, besides this bag, and it is bordered with the skin of a leopard that also belonged to Barnum. I have the skins of several of Barnum's dead animals and they make beautiful articles. That of a giraffe made into a robe bordered with tiger fur is greatly admired. I am longing for an elephant to die now, for I have a chair that will be fine when it is upholstered with the mouse colored hide. It is a great advantage to have such unique decorations that no one could imitate them."—New York Cor Chicago Herald.

The Virtues of the Mule.

The mule is very rarely sick—not near so often sick as is the horse. Its hoofs are much sounder. It is not so apt to be injured, not being so easily frightened. It will do the same amount of work on two-thirds the amount of food required by the horse. It will eat coarser food. When properly bred and handled it is full as trustworthy and industrious as the horse, and more docile than the horse. The docility and patience of the ass is proverbial. The mule endures exposure better than the horse. It will endure heat better, and I have never been able to perceive that it did not endure cold as well, though the notion that it cannot is general. But there is no good reason why it should not endure the weather of the northern states. While the mule is most used in warm climates, it is also used in regions where the temperature is full as low as in our northern states, and there lasts longer than do our horses.—Country Gentleman.

Death by Electricity.

The experiments of Dr. Tatum have done not a little toward clearing up the mystery that has surrounded the physical mechanism of death by electricity. He has made it more than probable that there is a real difference between the effects of continuous and alternating currents, in that the former seems to kill only through a direct action on the substance of the heart, while the latter owe whatever added danger they may possess to a distinct action on certain portions of the nervous system. Dr. Tatum has also shown that the difference in the effects of the two classes of current is far less than some foreign investigators would have us believe.—New Orleans Picayune.

IF YOU HAD A FRIEND

About to visit some section of country where malarial disease, either in the form of chills and fever or bilious remittent was particularly rife, what would be about the best advice you could give him? We will tell you—to carry along, or procure on arriving, that potent medicinal safeguard, Hostetter's Stomach Bitters, known throughout malaria plagued regions, here and in other countries, as the surest means of disarming the miasmatic scourage, and robbing it of its fell destructive influence. Not only does it fortify the system by increasing its stamina, but overcomes irregularity of digestion, the liver and the bowels, and counteracts the unfavorable effects of over-exertion, bodily and mental exposure in rough weather, or occupation too sedentary or laborious, loss of appetite and excessive nervousness. The functions of alimentation, bilious secretion and sleep have in it a most powerful and reliable auxiliary.

It is easier to trace figures that lie in ledgers than trace lies that figure in society.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY,

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the City of Toledo County and state aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE. FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

{SEAL} A. W. GLEASON, Notary Public.

Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free.

F. J. CHENEY & CO., Toledo, O.

Sold by Druggists, 75 cents.

When money is tight the market is naturally unsteady.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.

Send for Illustrated Catalogue, Free. A. J. Tower, Boston.

FAY'S PATENT

Manillo-Leather Roofing.

The cheapest thing in the market for Houses, Barns, Ice-Houses and Outbuildings. Write for catalogue and samples.

PACIFIC ROLL PAPER CO., Pacific Coast Agts. 30 & 32 First St., San Francisco, Cal.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted.

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

Cleopatra and Helen fair,
Were forty when their rows began
And Mrs. O'Shea was older yet
When she upset the Home Rule plan.

HAY FEVER AND CATARRH.

Those afflicted with either or both troubles will appreciate this letter from Joshua Harvey, of No. 5010 Elm Avenue, Philadelphia, Pa.

"I have used ALLCOCK'S POROUS PLASTERS for thirty years, and have always found them efficacious in coughs, colds, pulmonary complaints, rheumatism and pains in the back. I also was subject to violent attacks of catarrh or hay fever; to cure this I cut a strip sufficient to cover the forhead all over and applied it on going to bed. Slept well and got up with a clear head and nose stopped running, eyes bright, and all pain in the head and nose gone. Sometimes I am attacked with extreme hoarseness, but always relieved by an ALLCOCK'S POROUS PLASTER around the throat."

Everything—including dry rot and old age—comes to him who waits.

Mediocrity *always* copies *superiority*. Dobbins' Electric Soap, first made in 1865, has been imitated more than any soap made. Ask your grocer for *Dobbins'* Electric Soap, all other Electrics, Electricity, Magnetics, etc., are imitations.

The man who is waiting for something to turn up generally finds it when he steps on a barrel hoop.

BRONCHITIS.—Sudden changes of the weather cause Bronchial troubles. "*Brown's Bronchial Troches*" will give relief. *Sold only in boxes.* Price 25 cts.

A senator recently, in a speech, remarked: "General Grant needs no monument." No short sentence has made New York feel so good.

Beware of imitations of the genuine Seal of North Carolina Plug Cut Tobacco.

Try Germea for Breakfast

Dr. Price's Cream Baking Powder

A Pure Cream of Tartar Powder. Superior to every other known. Used in Millions of Homes—40 Years the Standard.

Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.

No other baking powder does such work.

SCOTT'S EMULSION

DOES CURE CONSUMPTION

In its First Stages.

Be sure you get the genuine.

EVERY SKIN AND SCALP DISEASE, whether torturing disfiguring, humiliating, itching, burning, bleeding, scaly crusted, pimply, or blotchy, with loss of hair, from pimples to the most distressing eczemas, and every humor of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. This is strong language, but true. Thousands of grateful testimonials from infancy to age attest their wonderful, unfailing and incomparable efficacy.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass. Send for "How to Cure Skin and Blood Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Rheumatism, Kidney Pains, and Muscular Weakness relieved in one minute by the CUTICURA ANTI-PAIN PLASTER. 25c.

VASELINE.

FOR ONE DOLLAR sent us by mail, we will deliver, free of all charges, to any person in the United States, all the following articles carefully packed in a neat box:

One two-ounce bottle of Pure Vaseline	10 cts.
One two-ounce bottle Vaseline Pomade	15 "
One jar of Vaseline Cold Cream	15 "
One cake of Vaseline Camphor Ice	10 "
One cake of Vaseline Soap, unscented	10 "
One cake of Vaseline Soap, scented	25 "
One two-ounce bottle of White Vaseline	25 "
	—$1.10

Or for stamps any single article at the price named. If you have occasion to use Vaseline in any form be careful to accept only genuine goods put up by us in original packages. A great many druggists are trying to persuade buyers to take VASELINE put up by them. Never yield to such persuasion, as the article is an imitation without value, and will not give you the result you expect. A bottle of Blue Seal Vaseline is sold by all druggists at ten cents.

Chesebrough M'f'g. Co., 24 State St., New York.

FACE TO FACE.

If my face could only promise that its color would remain,
If my heart were only certain it would hide the moment's pain,
I would meet you and would greet you in the old familiar tone,
And naught should ever show you the wrong that you have done.

If my trembling hand were steady, if my smiles had not all fled,
If my eyes spoke not so plainly of the tears they often shed,
I would meet you and would greet you at the old sweet trysting place,
And perchance you'd deem me happy if you met me face to face.

If the melody of springtide awoke no wild refrain,
If the autumn's golden burthen awoke no living pain,
I would meet thee and would greet thee as years ago we met,
Before our hearts were shipwrecked on the ocean of regret.

If my woman's soul were stronger, if my heart were not so true,
I would long have ceased remembering the love I had for you,
But I dare not meet or greet thee in the old familiar way,
Until we meet in heaven, when tears have passed away.

—Mary Mark Lemon in Temple Bar.

HER HUSBAND.

It is now over four years since I, Elizabeth Graves, first met Dora Hamilton. It was at Nice, on a brilliant day in February. I had just recovered from a sharp attack of typhoid fever and had been sent to the Riviera by my physician to complete my convalescence. One of his prescriptions was a drive every day when the weather was fine, and it was strictly followed. I enjoyed beyond measure my excursions in the environs of the city, the glorious sunshine, the vivid azure of sea and sky, the rich vegetation—in fact, all those elements that cause Nice to resemble a set scene in some magnificent theatrical spectacle. But I was far from strong, and could endure but little fatigue, and one afternoon my drive was prolonged far beyond the point that was either healthful or prudent. My driver lost his way, and after circulating about through various unknown roads for a long time, he finally brought me out on the heights of Cimiez, about half an hour after sunset. I was chilled and exhausted, and seeing the lights shining in the windows of a superb villa embowered in palms and orange trees near which we were passing, I called to the coachman to stop, and sent my maid in to ask the lodgekeeper for a glass of wine. This was brought by a kind hearted, motherly looking old woman, who, seeing my pallor and my half fainting condition, insisted upon my alighting and coming in to rest. I was so spent and weary that it was impossible for me to refuse. I was scarcely installed, however, when a handsome equipage dashed through the gates, there was a brief parley between the lodgekeeper and the new arrivals, and a lady entered the little room where I was seated, all eager kindness and hospitality, who introduced herself as Mrs. Hamilton, the tenant of the villa.

"I must come at once to the house, she said, impulsively. "I had been ill? Then I must wait and rest, and take some refreshment. And her brother, Dr. Somers, was a physician, and would know exactly what to do for me. My own carriage could come back for me later—that is, if it would not be best for me to stay all night." So, half coaxing, half compelling, she hurried me into her landau, and I found myself in a few minutes safely ensconced in an arm chair in the elegant drawing room of the Villa Vittoria (so called because the crown princess of Russia had once spent a week there), with wine and biscuits and tea set out on a little table beside me, and a bright fire blazing on the hearth.

Dr. Somers, a tall, grave looking gentleman, came in, felt my pulse, and declared that I was in need only of a few hours of thorough repose. And then I took a good look at the lady who had so suddenly and unexpectedly become my hostess.

I think she was one of the loveliest women I have ever seen in all my life. She was not positively beautiful, but she was exquisitely graceful, with a tall, slender figure that reminded me, in its litheness and swaying movements, of the stem of a calla lily. Her features were delicate and finely cut, her eyes most lovely, being large and transparent, of a soft yet lustrous gray. Her complexion had the pearly whiteness and varying blush rose tints of a person in fragile health, and indeed her whole aspect gave the impression of one that had suffered much and patiently endured. It is impossible for me to give by description any idea of the fascination of her manner, or the peculiar sweetness of her low, musical voice that seemed to hold a caress in each of its melodious tones. She wore an elegant costume in gray crepe de Chine, and a bonnet trimmed with clusters of pale tinted violets, and the refinement and delicacy of her aspect appeared to be continued in her attire.

I had never heard of Mrs. Hamilton, and Nice is not precisely the place where it is safe to form haphazard acquaintances, but it was impossible for me to resist the winning charm of that fair lady's voice and manner. I introduced myself as well as I was able, though she declared that no constatation of my identity was necessary, and after she had laid aside her bonnet, she came back and sat down beside me, and began to talk with the naive frankness of a child.

"We have come to Nice for the winter, my husband and I," she said, "for Edgar is delicate and cannot endure the cold of America or the dampness of Paris. In fact, his health gives me much uneasiness and requires constant watchfulness and attention. Fortunately, my brother is a physician, and he resides with us, and travels with us, and takes every possible care of Mr. Hamilton. Of course, I assist him as much as possible, but Edgar's condition is so very precarious and causes me so much anxiety, that I should never know a moment's peace if I did not have a medical adviser constantly at hand. We never go into society and receive few visits, for I am not very strong myself, and my husband needs all the time and attention I can devote to him. He seldom comes down stairs, but I wish he would do so this evening, for I should like to introduce him to you. Perhaps he has decided to dine with us this evening, and then that would by very pleasant."

She called to a servant, who had come to remove the tray. "Jules, go upstairs and see if Mr. Hamilton will be able to come down this evening."

The servant, an elderly, grave looking man, vanished, and speedily returned with the message that Dr. Somers did not consider it prudent for Mr. Hamilton to leave his room.

"Ah, well," said Mrs. Hamilton, with a smile, "it would not do for him to be imprudent. But I should have been so pleased to present Edgar to you—he is so handsome and so intelligent, and such a brilliant conversationalist. However, here is his picture, and you can judge from that how very good looking he is, apart from my conjugal prejudices," she added, with a blush as swift and vivid as though she were a newly betrothed maiden instead of a wife of many years' standing.

The picture that she put into my hand was a beautiful photograph on ivory, colored and finished as a miniature. It represented a singularly fine looking man, with blue eyes and blonde hair and mustache, but the eyes had a sinister gleam in their depths, and the full, red lips were sensual and coarse in outline and in expression. Moreover, the face was that of a much younger man than I had expected to see. Mrs. Hamilton, charming as she was, was evidently not far from 40 years of age, and the photograph of her husband was certainly that of a man under 30. There was no trace of ill health visible in the high colored, handsome face of the picture, so, after inspecting it for some moments, I asked: "Is this a recently taken likeness, Mrs. Hamilton? It does not look like the portrait of any one who had ever been ill."

"No, that is true." She took the photograph from my hand and seemed troubled, and also, to my astonishment, a little bewildered. "It was taken before we were married—twenty years ago. He has never had any other photograph taken since, and he will not sit to an artist. I cannot tell why, for to me he is always the same. Edgar! my Edgar!" And she pressed the picture to her lips, the tears streaming down her cheeks as she did so.

I was infinitely amazed at her emotion, which seemed to me so needless, and I was distressed at having unwittingly caused it, especially as I had not the faintest idea of how to proceed in order to soothe her. Just then, to my infinite relief, the door opened and Dr. Somers entered. Taking the miniature from Mrs. Hamilton's hand, he said to her, gravely: "My dear Dora, you are very foolish to let yourself become nervous and hysterical. You will be unable to sing to Edgar this evening if you do not cease sobbing and try to recover your voice."

"It was very foolish of me, Mark," replied Mrs. Hamilton, smiling up at him through her tears, "and Mrs. Graves must consider me a very absurd person, but you know whenever I think of poor Edgar's precarious health I am apt to break down utterly. Are you sure he is no worse than usual this evening?"

"Not a particle—rather better, in fact; but you can come and see for yourself, presently. Mrs. Graves will excuse you for a few moments, I am sure."

Just at that moment my carriage was announced, and I gladly availed myself of that excuse for taking leave at once, resisting all the hospitable entreaties of Mrs. Hamilton that I would stay and dine, if not remain all night, for I could not but feel that I was in the way, as indeed any guest, it seemed to me, would have been under the roof that sheltered so beloved and all absorbing an invalid as Mr. Hamilton evidently was.

I called a few days later to return thanks to my kind hostess for her hospitable care, and also to restore to her the numerous wraps and rugs in which she had insisted on enveloping me for my homeward drive. I did not see Mrs. Hamilton, however. Dr. Somers received me in her stead, and excused his sister on the ground that she was then in attendance on her husband. And as I crossed the hall I heard a voice of exquisite sweetness, that I readily recognized as that of Mrs. Hamilton, pouring forth its delicate notes in a scarcely known melody by Gounod.

"What a charming voice!" I remarked. "It is a pity that so fine a talent should be entirely lost to the world."

"My sister spends a great deal of time in singing to the invalid and also in reading to him," answered the doctor; "and she is happier in her self devotion than the praise and applause of society could make her."

After that day I had occasional glimpses of Mrs. Hamilton as her carriage passed mine during my daily drives. She never failed to lean forward and greet me with a pretty, eager gesture, and one of her sweet, pathetic smiles, but that was all that I ever saw of her. Her card was only left by her footman at the hotel for me, and greatly as I had been attracted by her, I shrank from again intruding on the privacy of that jealously guarded home.

There was evidently something mysterious about the malady and the seclusion of Mr. Hamilton. Gossip at Nice ran riot on the subject, and suggested all sorts of solutions for the riddle. One was that the invalid was not ill, but was simply insane, the constant presence of Dr. Somers and the peculiar taciturnity and reticence of the servants in the face of questions, and—must it be added?—even of bribes, being alleged in support of the theory. Then more malicious persons declared that Mrs. Hamilton was an adventuress who concealed a whole troop of lovers under the identity of the one unseen invalid, but that wicked report was speedily silenced, having no foundation in probability, as it had none in fact. The explanation of the matter which I was inclined to consider correct was, that Mr. Hamilton had been disfigured for life by injuries received in some accident or other shortly after his marriage, and shrank from permitting strangers to look upon his marred and distorted features. This theory was corroborated in my own mind by the tears Mrs. Hamilton had shed over her husband's miniature, and by his refusal to come down stairs while I was in the house.

The month of March had passed away, and the Riviera was flashing forth into all the brightness of early spring, when, one day, on my way home from an afternoon reception, I chanced to pass the Villa Vittoria, and was surprised to observe that the usually tranquil and solitary home was the center of a universal commotion. Servants were hurrying to and fro, groups of people hung about the lodge gate, talking and gesticulating, and within the sunlit windows of the distant villa might be observed a stir and confusion altogether foreign to the usual customs of the house. I sent my servant to inquire the cause of the excitement, and the lodgekeeper's aged wife came hurrying out herself to impart her tidings. They were both tragic and distressing. Mrs. Hamilton had gone out for an early drive to Montboron. Her horses had taken fright whilst descending the mountain, had run away and had overturned the carriage. The unfortunate lady was thrown out, and was injured so terribly that her life was despaired of. Dr. Somers, who had accompanied her, had escaped with some slight bruises, and had been able to superintend the removal of his sister to her home.

"He has been watching over her ever since, madam," continued the old woman, "and he sent far and near for the best doctors in Nice, but they did not stay long when they came, and I am afraid the poor lady is dying."

Acting on my first impulse, I sprang from my carriage and hastened to the villa. The sound of voices guided me to the room of the sufferer. I paused on the threshold of the open door, but Dr. Somers, who was seated by his sister's bed, looked up and saw me, and signed to me, without speaking, to enter. Mrs. Hamilton did not notice me, and I do not think she was even aware of my presence. Her fair face was uninjured, but the pale shadow of approaching death rested upon her features and dimmed the luster of her beautiful eyes. She was pleading with her brother as I arrived, and she went on with her piteous prayer as I approached the bed.

"I know that I am dying, Mark," wailed the melancholy tones, still so sweet amid their feebleness. "Call Edgar—do call Edgar—let me see him once more before I go! I cannot die happy unless I look again on his dear face. It cannot hurt him more than the news of my death will do. Oh, Mark—dear Mark—do tell Edgar to come to me!"

Without a word, Dr. Somers arose and flung wide open a door opposite to that by which I had entered, and which led to an inner room, all inundated with the golden glory of the April sunset. The whole interior of the apartment thus disclosed was visible to me from where I stood. There were flowers everywhere, and pictures, and books, and exquisite trifles of all kinds, were visible on every side, but there was no human being to be seen within.

With the opening of the door a sudden change passed over the features of the dying woman. The light returned to her eyes, and a faint color tinged her pale face, as, half raising herself on her pillows, she fixed her eager gaze on a point near the foot of the bed. There was no one there—she spoke to empty space—but never shall I forget the pathetic tones of her voice, the loving tenderness of her fixed, dilated eyes.

"I knew you would come to me, Edgar," she panted. "It is hard to say good by—we have loved each other so fondly, and you will miss me sadly, dear husband. But do not mourn for me—it will not seem long—our separation—after all. And think what it would have been for me had you died and left me alone in the world. I should have gone mad with grief, I think—but now—I go—to sleep—to dream of you—and when I wake you will be beside me—Edgar—my Edgar!"

She made a gesture as if to stretch out her arms toward the invisible being to whom she spoke—a spasm crossed her features, a rush of blood came to her lips, and she fell back upon her pillows. Dr. Somers bent over her, hearkened for a second and then pressed a lingering kiss upon her brow.

"All is over, Mrs. Graves," he said, as he raised his head. "Dora is with her husband."

Before the doctor left Nice he paid me a long visit, to thank me, as he said, for the interest I had manifested in his sister, and also to explain to me the riddle of her seemingly mysterious existence. The brother and sister had been left orphans at an early age, and each in possession of a handsome fortune. Some twenty years before, Dora Somers, then a very young and sensitive and affectionate girl, had been captivated by the showy graces and handsome person of Edgar Hamilton, an adventurer and gambler of conspicuously evil character. She loved him passionately, and became his wife in the teeth of the opposition of all her relatives. Immediately after the wedding the young couple started on a journey to Niagara Falls and Canada. A broken rail hurled the train on which they were traveling into wreck and disaster. Mr. Hamilton was instantly killed, and his bride received sundry severe injuries, chiefly on the head. She was ill for many weeks, and, on her recovery, it became evident that her reason was irretrievably shaken. She was possessed by the idea that her husband was still living, and that he was constantly with her. She shaped all her existence by his imaginary requirements, and would talk to him, and sing to him, and read to him, precisely as though he were really present. Her brother, with noble self devotion, gave up his whole life to the care of this gentlest of maniacs.

"And, thanks to my watchful affection, Mrs. Graves," continued the doctor, "she led a happy and peaceful life. Her Edgar—not the scamp that she married, but the bright creation of her own loving fancy—was always with her. The real Edgar, had he lived, would have rendered her fond, sensitive nature unspeakably wretched. She escaped all the sorrows of such a union, and I cannot but fancy that she and the visionary spouse that she loved and tended for so many years are now united where, beyond these voices, there is peace." — Lucy H. Hooper in Frank Leslie's.

DEACON BURDETTE'S PHILOSOPHY.

THE YOUNG WHITE HEAD.

You probe my story when you ask me how
In my life's morning all my hair is white
As Alpine snowdrifts on some mountain's brow,
That lifts above the peaks its lofty height.
My hair was blacker than the raven's wing,
And kindly matrons, aye, and laughing girls,
Smiled not unkindly on me—foolish thing,
And praised the ebon shading of my curls.
But in one summer night, so short and still,
It changed to ghastly white from raven hue;
You cannot help it, in a flouring mill,
It comes off easy with a wet shampoo.

BLOOD WILL TELL.

Be a gentleman, my son; be refined and gentlemanly in your home deportment. Don't be rough and vulgar toward those whom you love and respect. Be a nobleman. When a London costermonger's wife displeases him he kicks her with his heavy boots, but when the Duke of Snarlboro's wife offends him he only slaps her mouth. We cannot all be born of gentle blood, my son, as is the duke, but we can nobly aspire to something better than the coster.

DISTANCED.

Oh, I am the man who got left—
Of office and place I'm bereft;
When they counted the votes, as the tally denotes,
The other chap collared the heft.
There was fraud and corruption and theft,
For the other man's heelers were deft;
But without hesitation, I've this consolation,
I'd rather be right than be left.

—Brooklyn Eagle.

Only a Portion of His Family.

A short man convoying eleven children stood at Broadway and Cortlandt street yesterday afternoon. He wore a shiny Prince Albert coat, a decalcomanie on his necktie for a scarfpin, and there was a look of settled melancholy on his smooth shaven face.

The children ranged from about 15 years down. The eldest carried a satchel and the rest had umbrellas or bundles suited to their carrying capacity.

They were waiting for a Broadway car, and the small man grouped his charges carefully on the curb, uttering frequent admonitions the while. "Thomas," he said, reprovingly to a small boy, "if you drop that basket with the eggs in it there'll be trouble for you, sir, to-night. Isabella, put down that umbrella. You are poking everybody in the ribs."

Just then a car came along, and the perilous work of embarking the children began, bringing two drays and a cab to a standstill in Broadway.

"Hurry up, old man," called the cabman, "and hustle your picnic into the car."

"You want ter keep them orfuns outer Broadway," said a drayman, "or else dress 'em up alike with the name of the asylum on their collars."

The short man did not reply. He hoisted the smallest infant into the car, and as it started he turned his mournful face to the cabman and said: "This is not a picnic, it is a portion of my family. Perhaps, young man," he added with deepening sadness, "when you have had fourteen children life will not seem to you to be all a merry jest."
—New York Tribune.

Disturbing the Equilibrum.

Whoa, dar, the equilibrum am' slippin'——

Sh————! —Philadelphia Times.

A Chestnut, but Still Toothsome.

The late Justice Patrick Grattan was one of the most popular citizens of West Troy, where his memory will ever be green, and reminiscences of his witticisms continue to bring smiles to the countenances of his surviving friends, as passing events recall the name of the genial "Pat." It was but seldom that his quick wit would not pierce through any practical joke that was intended to be played on him, and he used to relate that the most completely that he was ever taken in was by a rollicking son of Erin, who stood arraigned and convicted before him for public intoxication. The fellow pleaded for mercy, saying that he had a large family dependent on him for support. "How many children have you?" asked the kind hearted Grattan. "Oi hev siven byes and a sister for ivery wan o' 'em," was the reply. He was let off with the payment of a light fine, and it was not till several minutes had elapsed that the court comprehended that one girl could be a sister to seven boys, just as easily as seven girls, as he at first thought.—Albany Argus.

A Use Found for It.

Omaha Husband—The play will be half over before we get started. Hurry up.

Wife—I can't find my theatre hat.

"I saw it this afternoon in the nursery."

"The nursery! How did it get there, I wonder?"

"I don't know. Maybe the children were using it for a playhouse."—Omaha World.

Let Us Give Thanks.

Thanksgiving day ought to be observed with more genuine thankfulness this season than usual. The election is over, the baseball season is ended, and John L. Sullivan has left the country. It is feared, however, that the papers will be more full of Sullivan's doings than ever.—Norristown Herald.

Well, Hardly.

They are not particular about small things in China. Recently the census takers forgot to enumerate the population of a little province containing 60,000,000 of souls. Such a thing would never have happened in St. Paul or Minneapolis.—St. Paul Pioneer Press.

Society Item.

Mistress (to maid)—Did any one call while I was out, Mary?

Mary—Yis, mum; a young man called to see Bridget, the cook, an' she sint wurrd up that she "wasn't at home till avenin'."—Texas Siftings.

Raw onions are now recommended as a cure for insomnia by physicians who do their prescribing by mail and telephone.—Omaha World.

The largest fish market in the world is Billingsgate, London, where 132,000 tons of fish are sold a year.

In a certain reference suit in London the cost on one side has already amounted to $500,000.

LOBSTER AND COD CULTURE.

A New Departure in the Propagation of the Shellfish.

It is very probable that unless we have resort to artificial culture to replenish our lobster fisheries there will be a marked decline in Nova Scotia's output during the next few years. Already Newfoundland is ahead of us in this branch of fish culture, for under the management of Adolph Nielsen, a Norwegian expert, "the ancient colony" has taken a new departure in the propagation of cod and lobsters. In a recent article Rev. Moses Harvey writes that the fish hatchery on the shore of Trinity bay is the largest in the world for the propagation of codfish and lobsters, and capable of hatching 300,000,000 of cod and 200,000,000 lobsters in a single season.

A single mother lobster can stow away no less than 20,000 eggs, and she carries these about with her until they are ripened and hatched. The lobster trapper takes these mother fish and carries them to the factory, where they are thrown into boiling water, and of course the eggs are destroyed. The quantity of lobster ova that perish in this way is beyond all calculation, and is one great cause of depleted fisheries.

Mr. Harvey thus describes Mr. Nielsen's ingenious methods: He gets the female lobster at the factories before they are boiled, and with a sort of spoon constructed for the purpose he strips the eggs from the fibrils and returns the lobster uninjured. He takes the eggs, which are not nearly so delicate as those of the cod, and places them in the incubators, where the water is kept in constant motion.

After a time, longer or shorter according to the degree of ripeness they have reached before being removed from the mother, these ova are hatched. With some of them only two days are required; in the case of others less advanced a month or even two months may be needed to hatch them. Unlike the cod the young lobster must be fed, for it has no yolk sac to feed on when it breaks from the shell. Mussels chopped fine, with occasionally a few yolks of eggs, furnish food on which they grow rapidly, and in five or six days they have gone through their first shelling and are fit to be set free in the water to pick up their own living.

Mr. Nielsen has invented floating incubators to be placed in the water near the lobster factories which are scattered around the shores. In these incubators the eggs are placed and attended to by men properly instructed. He has 432 of these floating incubators distributed this year at thirteen different stations—thirty-six at each. They are reported to be working admirably. There would be no serious difficulty involved in making similar experiments upon our own coast, and we understand that the energetic minister of marine already has the project under consideration.—Halifax Herald.

Selling the Queen a Tombstone.

Mr. Andrews came pretty near selling the queen a sample of his marble—that would have been a great thing for him. He was telling me all about it the other day.

"O. R. Johnson, the vice consul," said he, "got me a card to the queen's drawing room in May, and I went to it attired in a court dress which I hired at a shop in Bond street. There was an awful crush, but I contrived to get pretty near the head of the procession by tipping a sixpence to the lord chancellor of the privy chamber. I bowed and kissed the queen's hand in great shape; told her I had always admired and sympathized with her—that I particularly revered her for her devotion to the memory of the departed. My words seemed to touch her deeply. She answered that it was her determination to keep that memory forever green. 'In that case,' said I, 'let me give you a pointer—buy a fifty foot slab of my verd-antique marble!'"

"What did she say to that?" I asked.

"She didn't say anything," replied Mr. Andrews, "but a rude fat man in gilt lace and a cocked hat told me to keep moving on around to the left. I'd have closed a sale if it hadn't been for him."
—Eugene Field in Chicago News.

In the Cushing's Fire Room.

Very few of those who watched the torpedo boat Cushing as she took her spins around the harbor, or as she appeared in her cradle in the dry dock, realized how trying is service on board the little vessel, even in time of peace. When the Cushing is under way the temperature in the little engine room gets up to anywhere from 130 to 150 degs., and in the narrow quarters wherein the twenty-three officers and men are stowed the thermometer for hours at a time will register 100. But such things must be when you put 1,700 horse power machinery into a boat of only ninety tons displacement and the safety valves are set to blow off at 250. The fire room of the Cushing when she is making her highest speed, 31.4 miles an hour, must give the unfortunate men in it a vivid idea of how salamanders feel.

A Fortune from Beans and Beef.

Oliver Hitchcock, the Park row beans and beef man, has made more money from the sale of the two articles of diet mentioned than any man in the world. His fortune is estimated to be $750,000. He is said to own considerable stock in the New York Central railroad and to have a large sum invested in bonds and mortgages. He is a remarkably sturdy man for his age—he being 74 years old. Every day finds him behind his counter, at the corner of Beekman street, slicing the juicy cornbeef or ladling out the Boston vegetable. He works only four hours a day now.

Mr. Hitchcock began selling beef and beans forty years ago, and he has been at it continuously ever since. Some of the most famous newspaper men of New York city have dined at his humble restaurant. Horace Greeley was one of Hitchcock's regular customers. Hitchcock cannot remember why he made a specialty of beef and beans, but he has tangible evidence that if these articles are properly cooked and decently served they will bring a handsome remuneration.—New York Journal.

DAWN AND DUSK.

Apollo's shaft of radiant flame,
Shattered against the sea's blue shield,
On myraid ripples dance and gleam,
Gold stars strewn o'er an azure field.

Upon the shining sands they stand
In morn of day and morn of life,
Together stand, hand clasped in hand,
A bridegroom fond, a happy wife.

The moon, a silver scimitar,
Severs the driving rack of cloud.
Far, far beyond the harbor bar
The surges moan, now low, now loud.

Alone upon the darksome strand,
The black wave lapping at her feet,
A widow stands; vanished the hand,
Silent the voice that made life sweet.
—Mary J. Safford in Belford's Magazine.

Keep the Nails in Trim.

The base of the nails presents a not less important field for the exercise of care and attention than the tips. No nail can be a handsome one which is overgrown and smothered at the lower portion by a clinging mass of skin, often dry, split and ragged from neglect. If this condition has been allowed to continue from childhood the adult person who has come to feel something of pride in his personal appearance will confront quite a task in the attempt to correct the evil; but there is nothing of this sort impossible to the persistent, careful worker.

The skin should be patiently pressed back, by degrees, till the beauty of the well proportioned nail, with its charming, pearly white crescent at the base, stands out as an adequate reward for all the effort. If a manicure set be not at hand, gentle pressure from the thumb nail of the opposite hand makes a very acceptable substitute, the field of operations being kept in good condition by frequent bathing and rubbing, especial pains being taken to remove "hang nails" or any fragments of dry skin adhering to the nails themselves.—Good Housekeeping.

Excessive Ugliness in Soldiers.

Ugliness as a disqualifying cause seems intelligible in a candidate for matrimony, but is certainly less so when the question is one of fitness for military service. This, however, is one on the list of disqualifications laid down by the head of the medical department in a manual just issued on "Conscription in France." Latterly the French authorities seem to be much more liberal in admitting the claims of men who do not wish to serve. The rejections are 5 per cent. more numerous than at the previous conscription. The French are looking more to the quality of their army than to the number of recruits. Excessive ugliness, says this military doctor, makes a man ridiculous, prevents him from having authority over his comrades, and leaves him morbid and sensitive. If the ugliness be adequate the claim must be allowed. "Male hysteria" is another valid plea. The army doctors say it exists among French conscripts, and it is the more objectionable as it is contagious.—Cor. London Telegraph.

Two Paris Weddings.

Mlle. Jeanne Hugo, granddaughter of the celebrated poet, is betrothed to M. Leon Daudet, son of the novelist, Alphonse Daudet. The fiancee, who is very handsome—her dowry also—is just 20, and the young man is three years her senior and a promising member of the medical profession. For a long time the youthful Leon, whose wonderful monkey tricks made him the talk of Paris, was the boon companion of M. Georges Hugo, and both have been sketched in Daudet's recent books—pranks, talk, appearance and all. Another projected union in the world of letters is that of M. Paul Bourget, whose "Cœur de Femme" is having such an immense sale, and who is affianced to Mlle. Minnie David, the daughter of an American merchant residing in Paris.—Exchange.

About Sneezing.

"Bless you!" some one says on hearing a companion sneeze. "Bless you!" was just the exclamation made for the same reason in other tongues by several nations hundreds of years ago. More than one ancient Greek writer speaks of this custom, but cannot say certainly whence it came. The man who sneezed when offering sacrifice was thought fortunate and sure to obtain his object. We all know how sneezing may be caused. But it is curious to notice that some people sneeze on coming into the sunshine. It is well to remember that repeated or violent sneezing has its dangers. So the unseasoned must beware of snuff!—Exchange.

Naked Children.

Little Egyptians of both sexes trot around without any clothes on, and the poorer classes of the Chinese children are often without clothes. I have seen quite large boys and girls naked in Havana, Cuba, and in southern California, or rather on the California peninsula, the mother puts the child at the age of a few months a-straddle of her neck, and with his legs hanging down in front thus carries him from place to place.—Washington Letter.

A Georgia Negro's Shoes.

The largest pair of shoes ever seen in Dawson were received the other day by Mr. L. C. Durham for a negro by the name of Alex White. The shoes were numbered fifteen and weighed four pounds and five ounces. White can never find any shoes in stock that will fit him, and always has to put in a special order for them.—Macon Telegraph.

A Method in His Wildness.

During a hunt a lieutenant fired at a rabbit, but missed it and narrowly missed the major of his regiment, who was in front of him.

"Donnerwetter!" exclaimed the major. "I say, lieutenant, are you shooting at rabbits or for promotion?"—Texas Siftings.

The Rise and Fall.

Briggs—They say a watch keeps better time when it is kept at a certain distance from the ground. That must be why yours is so irregular.

Griggs—I don't see the point.

Briggs—Because it is put up so often.—Clothier and Furnisher.

Making a Rubber Shoe.

Supplementary to the great shoemaking business here is the rubber industry, for which Boston is the great center in this country. Forty million dollars' worth of rubber shoes and boots are sold in the modern Athens annually. The raw material comes from Para, Brazil, in huge lumps, which the natives make by dipping sticks in the sap of the caoutchouc tree and turning them round and round with frequent plunges into the heated rubber over a hot fire. These lumps, upon reaching the factory, are cut in slices, which are run through rollers and pressed out thin and flat like pancakes. The sheets thus obtained are next put through other rollers, heated to a high temperature, and incidentally amalgamated with a composition of lampblack, sulphur and litharge, which reduces them to a soft and putty like consistency.

Finally, in this soft condition, they are passed over steel rollers bigger than any that have gone before, and actually incorporated with the tissue of a woolen cloth which is destined to serve as the lining of the eventual boot or shoe. If you will try to pull apart the lining and outer coat of a rubber sandal, you will obtain a notion of the thoroughness with which this part of the manufacture is performed. The rubber sheets, thus prepared, are passed through a last set of rollers, on which are engraved all the markings and corrugations of the sole and upper that appear in the completed article. The rubber sheets are now ready for the cutter, who turns out the various pieces by hand, with the aid of a knife and patterns. The parts are then put together by other workmen with rubber tape. When this much has been accomplished, the shoe or boot is lasted in the usual way, and, after being varnished, is allowed to remain for eight hours in a room heated to the temperature of 235 degs. The heat sets the varnish and tempers the rubber, which is then termed "vulcanized." The stamping of the firm name on the sole is the concluding operation, and then the rubber shoe is ready for sale.—Boston Cor. Chicago Tribune.

Horses' Delight in Sound.

It has been often observed by those who had to do with horses that these animals have their proper pride in regard to the looks of their harness and trappings. The horse is quick to show his pleasure or displeasure, and he does this at times with marked emphasis. His sensitiveness is not limited to the delight of the eye, but he is equally moved by the sensation of sound. Horses seem in many cases to be conscious of the tuneful melody or the jangling discord, as the case may be, made by the bells which are put upon them in the winter when they are driven to sleigh and sled.

Mr. Hissey, an Englishman who has made a trip through his own country, and has written a book about it, found bells in use all the year round on the narrow country roads of Derbyshire. A driver of one of those teams told him that once, being in a hurry, he neglected to put on the bells. The consequence was that the horses were so indignant they refused to start. As soon as the bells were fixed on the horses started and went contentedly on their way.

These simple tastes of the horse appear much like vanity. The animal seems wholly insensible to the charms of landscape, but its fancy is taken by the glitter and flash of a bit of tinsel worn by itself. It takes no notice apparently of the sweetest notes of singing birds heard in the thickets about its pasture, but is delighted with the ringing of bells, with which it makes music by its prancing step and by the tossing of its neck.—Youth's Companion.

The Bandmaster of West Point.

The cadet hop is a scene of almost bewildering beauty. It takes place in the mess room in Grant hall, about which are hung the portraits of great commanders, so thickly that it looks like a picture gallery. The floor is of hard wood and perfectly polished. Upon a little platform the band is seated. Its leader possesses a proud and haughty physique, and is evidently profoundly impressed with his own importance. I have seen many eminent and powerful personages, in whose hands rested the destinies of states, but how small they all look in the presence of a really exalted bandmaster.

When he frowns harshly at the bass fiddle, when by a twist of the wrist he inspires the flute to renewed exertions, when his fiery eye lights on the unhappy man who bangs the cymbals, but banged them at the wrong second, when he becomes excited and throws himself around on all sides at once, how it does seem as if the music came right out of the end of his baton. Now he shuts his eyes dreamily and moves his hand slowly, like the swell on the sea, while a dreamy melody floats upon the heavy air. Now he scarcely moves at all, and only the exquisite strain of a single violin touches your ear. Now his bosom heaves, his eyes glow, his hands beat wildly, and a tumultuous chorus breaks forth like the roar of an angry battery or the shout of a victorious host! And he does it all with just that little black scepter. What majesty compares with his?—West Point Cor. New York Tribune.

Our American Stock Waning.

Civilization, strange as it may seem, in voves marked tendencies toward degeneration. It is possible civilization will never attain a condition wherein it is able to successfully carry forward a race without at the same time losing part of the best powers of that race. Our American stock is seriously waning in more ways than one. Our keenness of vision is not comparable to that of our savage forefathers. We are losing, or so far have lost, in teeth and hair, which means that we have lost in our animal vitality. Moral degeneracy in some forms is also quite as surely an adjunct of progress. Insurance against fire has increased perjury; business competition, awakening energy and industry and tact, has also increased selfishness. It does not seem an evil to most business men to crowd down their neighbors and crush their rival enterprises. The building of large cities involves the creation of a secondary barbarism, a caste consigned to decay and dissolution. So far we have devised no progress without an increase of inventions for self destruction. Drunkenness and debauchery have overwhelmed much of the best and most hopeful.—"E. P. P." in Globe-Democrat.

Not the Lawn Mower.

"I hate to make a complaint, Mr. Smith, but that lawn mower of yours is a terrible nuisance."

"Lawn mower! I haven't got any lawn mower."

"Haven't got any lawn mower? Well, that's good! As though I hadn't heard it night and morning ever since I moved here. There! there goes the confounded thing again!"

"But, my dear sir, that isn't a lawn mower. That's my son winding up his Waterbury."—Boston Transcript.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY FEBRUARY 20 ..... 1891.

The estate left by John Kelley amounts to $200,000. It is left to his widow and two childnen.

The Reno "Gazette," in an editorial on Admiral Porter, says he captured Vicksburg. This corrects a mistake most people had fallen into thinking that General Grant had accomplished that very difficult job.

There is not an intelligent man in the state but knows that the Railroad Commission is an expensive and useless sham. But there are some intelligent men who are interested in keeping this sham in existance, and these can easily, it appears, so gull the dull crowd who make a majority of the Legislature that the humbugging Commission is kept in existence.

How utterly ridiculous and contemtible the great bulk of members of the Legislature appear in the newspaper accounts of the proceedings. The daily history is of what Dan Burns and Phil. Crimmins are doing, and the solons are but the balls that those expert billiardists are punching about upon the table. Men who have schemes to accomplish that they are willing to pay for, turn with contempt from the stupid herd, and employ a political vaquero who rounds them up like horned cattle and sells them to the highest bidder.

Admiral David D. Porter died at Washington last Eriday morning. He was aged 78 years. The father of Admiral Porter was as brave an officer as ever served in the United States Navy, and till this day the men of the Navy are proud of his fame. The son was worthy of such a sire. Admiral Porter was as brave a man as ever trod a deck or carried a ship into action. The editor of this paper served on the same ship with Admiral Porter on the memorable advance up the Mississippi in 1862, and saw him under fire for weeks together. His calm, cool courage inspired his men and made them ready for any service.

General Sherman died, but the record of his great services to his country will endure as long as civilization endures. His fame is without a stain. Never in the world's history did three greater men live and act together for the good of their country than Lincoln, Grant and Sherman, and not a single instance occurred of any jealousy or self-seeking on the part of any one of the three at the expense of the others. America may well be proud of the entire greatness of her great men, and their noble freedom from the petty failings from which the greatest of other lands have not been free. No act of the dead soldier needs apology, and no trait of his character needs excuse.

One of the very best speeches yet been made on the silver question was recently addressed to the Coinage Committee of the House of Representatives. The following passage is especially good: "We believe that the money of the world, whose volume is limited by nature itself, is a better money than that whose volume is limited by legislation—by either the folly or the wisdom of man. And we say that so long as there is a dollar of such credit money in existence, as long as there is a paper note issued by any government in the world, as long as there is a bank note issued by any bank and made a legal tender, so long the necessity for both gold and silver, as money, is absolutely demonstrated."

A bill has been passed by the Legislature and signed by the Governor, the purpose of which is to submit to the people a proposition to amend the Constitution by extending the session of the Legislature from sixty days to one hundred. This change should be defeated. All the legislation that is good for the state con be done in sixty days. The real purpose of the amendment is to enable the members of the Legislature to draw more pay. The pay now allowed members is entirely too small, but it would be much better to double the per diem than to lengthen the sessions. A large majority of the men sent to the Legislature are utterly unfit by education or experience to make laws. They sit in the chamber like so many wooden Indians in front of a cigar stand. and the few schemers who are in every Legislature use them in manipulating "cinch" bills and laugh at their stupidity. If the Legislature met but once in four years there would be less tinkering at the codes, and this alone has grown to be a grewsome evil. If the people do not want to afford corrupt schemers more opportunity they will defeat the proposed amendment when it shall be submitted to a vote.

PUBLIC NOTICE

Is hereby given that unless the foregoing taxes and costs are paid I will on

TUESDAY,

The 24th Day of February, 1891,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 20th day of January, A. D. 1891.

J. S. GORMAN,
Tax Collector of Inyo county, California.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2,324, Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.

Dated Cerro Gordo, January 2, 1891.

DIED.

EDDY—At Darwin, February 19 1891, John Collins Eddy, aged about 54 years.

"Beebee," one of Ouida's most charming stories, is begun in this number.

Mr. Ben. Lasky has returned to Lone Pine after a visit of six week to San Francisco.

Mr. Israel Luce came up from San Francisco and has been at the Marble Quarry during the week.

Mrs. J. J. Gunn came in from Lookout yesterday and is visiting with her parents at Georges Creek.

It is announced that Mr. Sam Lasky will be married at San Francisco on March 20th. Mr. Mike Lasky is booked for similar trouble in April.

Last Sunday morning rain set in and during the twenty four hours following it kept on a good steady pour. This is the first rain at Independence since the beginning of last December. It has done great good.

Mr. J. C. Eddy felt so much better last week that he went home from Lone Pine to Darwin. He was there but a day or two when he was again taken violently ill and a messenger was sent to Lone Pine for Dr. Middleton to attend him.

It is reported that down in Salt Wells Valley and the Mojave desert a great many cattle have died recently. The winter has been dry and feed so short that the animals starved to death. Lander and other stockmen on the South Fork are said to be the heaviest losers.

It is understood that the farm of the late Ezra Goodale has been rented for one year for $200. The place contains 160 acres of the best land in Owens Valley, and has an abundance of water. This shows how little value property now has.

Many children are compelled to stay out of the schools at present because they are suffering from an attack of something like the grippe. Most of them who do attend are suffering more or less and a continual chorus of coughing is kept up in the school room.

On Wednesday morning a telegram from Bishop informed Mr. White Smith that his sister had just died there The young lady had very recently come to Independence from Texas. Mr Smith at once started from Independence for Bishop when he got the sad news. He grieved very sorely for the loss of his sister.

The officers of the Masonic lodge at Independence, to serve for the current year, were installed on Monday evening by A. O. Collins, Inspector for the district. Following are the officers: John S. Gorman, W. M.; Thomas C. Boland S. W.; G. W. Brady J. W.; C. Mulholland, Sec.; O. I. Mairs, Treas.; John Seepherd, S. D.; H. P. Cartier, J. D.; J. Mairs and N. E. Conklin, Stwds.; Thomas Parker, Tyler.

Farmers in different parts of the Valley complain that they cannot find market for beef cattle. After feeding steers with alfalfa till they are in the finest condition for beef they are forced to turn the animals out on the range, and thus lose all the fruits of the labor and expense of feeding. In many instances the same animals have been fed and turned out two years in succession.

Modock Mines.

Mr. Frank Fitzgerald reports that the value of ore sold from the Modock mines during January was $4,470. Three eight hour shifts are driving a tunnel to cut a body of ore in the Argus shaft. A new prospect in the Black Warrior mine is turning out one ton of high grade ore per day. Mr. Fitzgerald has 22 men employed at present. There is a postoffice at the camp and mails are delivered regularly; a large and comfortable reading room is provided and well supplied with newspapers and other reading matter. There is abundance of good water and every facility afforded for the men to be clean and comfortable.

Proving Up.

A party of four men have been at Independence the past few days proving up on land under the Eastside canal. Their names are A. C. Hofer and J. W. Holbrook of Carson. and E. J. Gorham and R. Wood of Gold Hill. Several thousand acres have already been proved up on, but so far, no land under the Eastside canal has been put under cultivation, with the exception of a few acres cleared by Mr. McIver. One locator spent a large sum of money and two years labor attempting to cultivate a tract of 320 acres. Many thousand grape vines were planted but there is not today a living vine upon the place. Fruit trees of various kinds were set out, but all appear to be dead. Last summer the locator quit further efforts to do anything with the place, and the drifting sands have since piled up on it.

Keeler Anniversary.

The social gathering at Keeler on the 17th of March of each year has become so well established a custom that it may fairly be called a Keeler anniversary. Since the Lake View Hotel was first established Mr. and Mrs. John Barnes have invited all of their friends to meet with them on the above named festal day of each year. There has always been a large response to the invitation and a jolly good time for all comers. The meeting this year is appointed for the evening of Monday, March 16th, as that will be more convenient for parties going by rail. The Independence Orchestra has been engaged to furnish the music, and as the latest and livliest ball music has been got from San Francisco and thoroughly studied and rehearsed for this occasion, that part of the entertainment is very likely to give pleasure to the company. In all other ways Mr. and Mrs. Barnes will leave nothing undone to make their friends happy. See the advertisement.

UNPLEASANT FACTS.

Last week an article appeared in this paper on the present financial condition of Inyo County. Every word of the article was strictly true, and, in fact, was but a repetition in condensed form of what is daily said by business men and farmers all over the county. No man is more deeply interested in the prosperity of Inyo County than the President of the Carson and Colorado Railroad Company. Two years ago a meeting of the farmers and business men was held at Bishop. Mr. H. M. Yerington, the gentleman alluded to, addressed the meeting and among other things said, "If we hauled your farm produce over our road entirely free of freight charges you could not compete at Reno even, and if what you say of your farming operations be true, your country is not worth a dollar a mile." No one will suspect Mr. Yerington of any intention to deliberately make a false statement that would be injurious to Inyo County. But no cause or country was ever helped by a steady course of lying and the INYO INDEPENDENT is not in that business. Owens Valley is not prospering as it should. Money is becoming scarcer every day and people are becoming more irritable. From Independence to Owens Lake, a distance of twenty-one miles, and including the best fruit land in the valley, during the past six years but four families have located and built houses, and of these four only one attempts to make a living from his farm. Except in the vicinity of Bishop there has been almost absolutely no increase of population in all those years throughout the county. It is a fact, only too notorious, that there never yet came a man into Inyo County bringing money with him to invest in land, but what is poorer today than when he came here, and some have lost all they brought. Others who have invested largely and made great improvement say they would gladly sell out for fifty cents on each dollar of what they have invested. One of the shrewdest men and best managers in the county owns 240 acres of average good land in a very desirable location. He has one of the best water rights in the county, and his farm never was encumbered to the amount of one dollar. He had capital enough to stock it well with all the horses and machinery necessary to work it to the greatest advantage. He reports that during seven years the total value of produce sold from his farm averaged but one hundred dollars per year. This man says that his utmost efforts only resulted in a bare living for his family, and he will try something else than farming. What, then, need men expect who locate on wild land without considerable capital, or perhaps without any? Only an enemy to mankind will by lying and misrepresentation lure men with their families into a region where poverty and suffering await them. W. H. Dimond, Superintendent of the Mint at San Francisco, in his report of the yield of gold and silver for the whole State by counties for the year 1889, gives the yield of Inyo County at $182,663. When freight and smelting charges are deducted from the gross amount only about $40 per capita would remain as income for the county, and all other sources of income combined would make but very trifling addition to this amount. With a high rate of taxation and $60 per ton freight on all goods, wares and merchandise brought into the county, it is at once apparent that prosperity is an impossibility. No intelligent man ever visited Owens Valley without being impressed with its great natural resources. It is the best watered valley in the State. It contains not less than a half million acres of land that could be cultivated and made to produce fairly good crops. All the fruits of the Temperate Zone do well, and with access to market fruit growing would be quite profitable. But the fact that these resources exist, and yet the country is not prospering, is proof enough that there is need of change somewhere. The more fully and truthfully the facts are stated, the sooner will the needed change be effected.

Scarcity of Fuel.

A large quantity of wood—several hundred cords—has recently been hauled out of Mazourka Canyon and shipped away by rail from Citrus. The wood haulers say that along the Inyo Mountains wood now begins to be quite scarce, and will henceforth be difficult to get, and consequently expensive. As that is the source whence Independence and neighborhood is supplied with fuel, this begins to be a question of interest to the citizens. As the timber land belongs to the United States it does not seem right that a few men should be allowed to exhaust the supply of fuel that ought to supply a common want and sell it for their own gain. But many of the enormous fortunes of our own day have been acquired by boldly seizing something that every law abiding citizen has equal right to, as the forests, public lands, coal, natural gas and oil lands. If we had men wise and honest enough to make the laws these sources of wealth would be developed for the good of all, instead of allowing a few bold adventurers to seize them and thereby acquire such enormous wealth as thretens to utterly corrupt every branch of the public service and in the end ruin our republican system of government entirely. The centralization of wealth in a few hands utterly rotted out the Republic of Rome, and it is very doutful if modern hearts are any purer or modern heads any wiser than were those of old Rome.

John C. Eddy Dead.

On Thursday morning a message came to Indepencence that J. C. Eddy had died at 4 o'clock. He had been ailing several weeks. About three weeks before he had been brought from his home at Darwin to Lone Pine, where he recovered so much that he had returned to Darwin. But he was at once taken ill again and in a few days death resulted. Mr. Eddy had long been interested in the mines about Darwin and was always a ready and liberal friend to prospectors. He was a successful merchant and his store of goods was ever ready to supply the needs of miners till a lucky find enabled them to pay. The value of the estate left by the deceased is not publicly known, but probably it will amount to about $90,000. He had invested in real estate at San Jose and the value of this is not known here. Mr. Eddy leaves no family. It is not known here if he had any living relatives. It is generally supposed that he died without making a will; consequently, there is no certainty regarding the final disposition of the property. Mr. Eddy was the son of English parents. He was born in Spain, but brought to the United States when very young and became a citizen through the naturalization of his father. The funeral will take place at Independence tomorrow at 2 p. m.

Who? Where?

A few days ago Mr. John Barnes of Keeler received a letter of which the following is a copy:

SALT LAKE, Feb. 9; 1891.

MR. JOHN BARNES: *Dear Sir:*—A gentleman has told me of your Lake water cure for catarrh. I have catarrh very bad and would like to have a bottle of the water.

Mr. Barnes would very readily send the water, but as the writer of the letter failed to give name or address he cannot do so.

School Board

The County Board of Education met on Tuesday. Present, J. Shannon, Superintendent, D. Crough, A. E. Janvier, T. W. Rathbun. There was but one applicant for examination, Miss Mathilde Meysan, of Lone Pine. At this hour the examination is not finished, but it is understood that Miss Meysan will pass very creditably. On the three studies that are called essential, grammar, arithmetic and spelling, her percentage is ninety, which is very creditable, 80 per cent being all that is required to pass.

It is proposed to erect a Masonic Temple at San Francisco to cost $1,500,000. A fine site has been secured for the building on the corner of Van Ness Avenue and Sutter Street. The price of the lot is $130,000. The stock for the new building is divided into 70,000 shares at the par value of $20 per share. Masons all over the state are invited to take stock. The present masonic temple is no longer suited to the needs of the Fraternity, and its location in the midst of the greatest noise of the City is very objectionable.

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Charles D. Begole deceased.

IT APPEARING TO THE COURT, BY THE petition this day presented and filed by Thomas Parker, the Administrator of the Estate of Charles D. Begole, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the said Court that all persons interested in the estate of said deceased, appear before the said Superior Court on Tuesday, the 24th day of March, 1891, at ten o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administrator to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

GEO. M. GILL,
Judge of the Superior Court.

Dated February 18th, 1891.

[ENDORSED.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Charles D. Begole, deceased.

Order Fixing time and place for hearing petition for sale of Personal Property and Real Estate.

Filed February 18th, 1891.

J. N. YANDELL,
Clerk.

NOTICE TO CREDITORS.

$3000 A YEAR! I undertake to briefly teach any fairly intelligent person of either sex, who can read and write, and who, after instruction, will work industriously, how to earn Three Thousand Dollars a Year in their own localities, wherever they live. I will also furnish the situation or employment at which you can earn that amount. No money for me unless successful as above. Easily and quickly learned. I desire but one worker from each district or county. I have already taught and provided with employment a large number, who are making over $3000 a year each. It is NEW and SOLID. Full particulars FREE. Address at once, E. C. ALLEN, Box 420, AUGUSTA, MAINE.

Some little FORTUNES have been made at work for us by Anna Page, Austin, Texas, and Jno. Bunn, Toledo, Ohio. See out, others are doing as well. Why not you? Some men over $300.00 a month. You can make the work your O'ly or spare time, wherever you are. Even beginners are easily earning from $5 to $10 a day. All ages. We show you how and start you. Can work in spare time or all the time. For money, it works like honey. Large enclosures taught free. Full particulars FREE. Address at once, H. HALLETT & Co., Box 880, PORTLAND, MAINE.

MUSICAL.

There seems to be little going on in musical circles of late, but there is much talk, among musical people, of the marvelous cure of Miss B——, the high contralto singer, who has long suffered from a severe throat or bronchial affection, superinduced by Catarrh in the Head, and who has been perfectly cured by the use of Dr. Sage's Catarrh Remedy, coupled with the use of Dr. Pierce's Golden Medical Discovery. For all bronchial, throat and lung affections, and lingering coughs, it is an unequaled remedy. When complicated with Chronic Nasal Catarrh, its use should be coupled with the use of Dr. Sage's Catarrh Remedy. Of all druggists.

When I was an atom I served a term
As office boy to a cholera germ.
But now I've grown so great that I
Am known as the monarch of the bacilli.

Young Mother (whose child is decidedly uneasy)—I'm sure I don't know what to do with you, baby. Stranger (in the next seat)—Can't you get that window open, madam?

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Portefield & Losey, 838 Market street, San Francisco.

An Eloquent Young Man—Julia—So Mr. Deadgone got on his knees to you last night. Did he do the thing up right? Ada—Oh, yes, he made a ringing speech.

If you have ever used Dobbins' Electric during the 24 years it has been sold, you *know* that it is the best and purest family soap made. If you haven't tried it, ask your grocer for it *now*. Don't take imitation. There are lots of them.

The Game Laws—"Miss Amy, do you know anything of the Game laws?" "Oh, yes, Mr. Dolley." "What, for instance?" "Never trump your partner's ace."

"German Syrup"

The majority of well-read physicians now believe that Consumption is a germ disease. In other words, instead of being in the constitution itself it is caused by innumerable small creatures living in the lungs having no business there and eating them away as caterpillars do the leaves of trees. The phlegm that is coughed up is those parts of the lungs which have been gnawed off and destroyed. These little bacilli, as the germs are called, are too small to be seen with the naked eye, but they are very much alive just the same, and enter the body in our food, in the air we breathe, and through the pores of the skin. Thence they get into the blood and finally arrive at the lungs where they fasten and increase with frightful rapidity. Then German Syrup comes in, loosens them, kills them, expells them, heals the places they leave, and so nourish and soothe that, in a short time consumptives become germ-proof and well.

A Germ Disease.

The Oldest Medicine in the World is probably
DR. ISAAC THOMPSON'S
CELEBRATED EYE-WATER.
This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century. There are few diseases to which mankind are subject more distressing than sore eyes, and none, perhaps, for which more remedies have been tried without success. For all external inflammation of the eyes it is an infallible remedy. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits. For sale by all druggists. JOHN I. THOMPSON, SONS & CO., Troy, N. Y. Established 1797.

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

CHAPTER I.

Bebee sprang out of bed at daybreak. She was 16.

It seemed to be a very wonderful thing to be as much as that—16—a woman quite.

A cock was crowing under her lattice. He said how old you are!—how old you are!—every time he sounded his clarion.

She opened the lattice and wished him good day, with a laugh. It was so pleasant to be woke by him and to think that no one in all the world could ever call one a child any more.

There was a kid bleating in the shed. There was a thrush singing in the dusk of the sycamore leaves. There was a calf lowing to its mother away there beyond the fence. There were dreamy muffled bells ringing in the distance from many steeples and belfries where the city was; they all said one thing: "How good it is to be so old as that—how good, how very good!"

Bebee was very pretty.

No one in all Brabant ever denied that. To look at her it seemed as if she had so lived among the flowers that she had grown like them, and only looked a bigger blossom—that was all.

She wore two little wooden shoes and a little cotton cap, and a gray kirtle—linen in summer, serge in winter, but the little feet in the shoes were like rose leaves, and the cap was as white as a lily, and the gray kirtle was like the bark of the bough that the apple blossom parts, and peeps out of, to blush in the sun.

The flowers had been the only godmothers she had ever had, and fairy godmothers, too.

The marigolds and the sunflowers had given her their ripe, rich gold to tint her hair; the lupins and irises had lent their azure to her eyes; the moss rose buds had made her pretty mouth; the arum lilies had uncurled their softness for her skin, and the lime blossoms had given her their frank, fresh, innocent fragrance.

The winds had blown, and the rains had rained, and the sun had shone on her, indeed, and had warmed the whiteness of her limbs, but they had only given to her body and her soul a hardy, breeze blown freshness like that of a field cowslip.

She had never been called anything but Bebee.

One summer day Antoine Maes—a French subject, but a Belgian by adoption and habit, an old man who got his meager living by tilling the garden plot about his hut and selling flowers in the city squares—Antoine, going into Brussels for his day's trade, had seen a gray bundle floating among the water lilies in the bit of water near his hut and had hooked it out to land, and found a year old child in it, left to drown, no doubt, but saved by the lilies, and laughing gleefully at fate.

Some lace worker, blind with the pain of toil, or some peasant woman harder of heart than the oxen in her yoke, had left it there to drift away to death, not reckoning for the inward ripple of the current or toughness of the lily leaves and stems.

Old Antoine took it to his wife, and the wife, a childless and aged soul, begged leave to keep it; and the two poor lonely, simple folks grew to care for the homeless, motherless thing, and they and the people about all called it Bebee—only Bebee.

The church got at it and added to it a saint's name; but for all its little world it remained Bebee—Bebee when it trotted no higher than the red carnation heads—Bebee when its yellow curls touched as high as the lavender bush—Bebee on this proud day when the thrush's song and the cock's crow found her 16 years old.

Old Antoine's hut stood in a little patch of garden ground with a brier hedge all round it, in that byway which lies between Laeken and Brussels, in the heart of flat, green Brabant, where there are beautiful meadows and tall, flowering hedges, and forest trees and fern filled ditches, and a little piece of water, deep and cool, where the swans sail all day long, and the silvery willows dip and sway with the wind.

Turn aside from the highway, and there it lies today, and all the place brims over with grass, and boughs, and blossoms, and flowering beans, and wild dog roses; and there are a few cottages and cabins there near the pretty water, and farther there is an old church, sacred to St. Guido; and beyond go the green level country and the endless wheat fields, and the old mills with their red sails against the sun; and beyond all these the pale blue, sea like horizon of the plains of Flanders.

It was a pretty little hut, pink all over like a sea shell, in the fashion that the Netherlanders love; and its two little square lattices were dark with creeping plants and big rose bushes, and its roof, so low that you could touch it, was golden and green with all the lichens and stoneworts that are known on earth.

Here Bebee grew from year to year; and soon learned to be big enough and hardy enough to tie up bunches of stocks and pinks for the market, and then to carry a basket for herself, trotting by Antoine's side along the green roadway and into the white, wide streets; and in the market the buyers—most often of all when they were young mothers—would seek out the little golden head and the beautiful frank blue eyes, and buy Bebee's lilies and carnations whether they wanted them or not. So that old Maes used to cross himself and say that, thanks to Our Lady, trade was thrice as stirring since the little one had stretched out her rosy fingers with the flowers.

All the same, however stirring trade might be in summer, when the long winters came and the Montagne de la Cour was a sharp slope of ice, and the pinnacles of St. Gudule were all frosted white with snow, and the hot house flowers alone could fill the market, and the country gardens were bitter black wind swept desolations where the chilly roots hud died themselves together under ground, like homeless children in a cellar, then the money gained in the time of leaf and blossom was all needed to buy a black loaf and fagot of wood; and many a day in the little pink hut Bebee rolled herself up in her bed like a dormouse, to forget in sleep that she was supperless and as cold as a frozen robin.

So that when Antoine Maes grew sick and died, more from age and weakness than any real disease, there were only a few silver crowns in the brown jug hidden in the thatch, and the hut itself, with its patch of ground, was all that he could leave to Bebee.

"Live in it, little one, and take nobody in it to worry you, and be good to the bird and the goat, and be sure to keep the flowers blowing," said the old man with his last breath; and sobbing her heart out by his bedside, Bebee vowed to do his bidding.

She was not quite fourteen then, and when she had laid her old friend to rest in the rough green graveyard about St. Guido she was very sorrowful and lonely—poor little bright Bebee, who had never hardly known a worse woe than to run the thorns of the roses into her fingers, or to cry because a thrush was found starved to death in the snow.

Bebee went home and sat down in a corner and thought.

The hut was her own, and her own the little green triangle just then crowded with its May day blossom in all the colors of the rainbow. She was to live in it, and never let the flowers die—so he had said; good, rough old ugly Antoine Maes, who had been to her as father, mother, country, king and law.

The sun was shining.

Through the little square of the lattice she could see the great tulips opening in the grass and a bough of the apple tree swaying in the wind. A chaffinch clung to the bough and swung to and fro singing. The door stood open, with the broad, bright day beaming through, and Bebee's little world came streaming in with it—the world which dwelt in the half dozen cottages that fringed this green lane of hers like beavers' nests pushed out under the leaves on to the water's edge.

They came, some six or eight of them, all women; trim, clean, plain Brabant peasants, hard working, kindly of nature and shrewd in their own simple matters; people who labored in the fields all the day long, or worked themselves blind over the lace pillows in the city.

"You are too young to live alone, Bebee," said the first of them. "My old mother shall come and keep house for you."

"Nay—better come and live with me, Bebee," said the second. "I will give you bit and drop, and clothing, too, for the right to your plot of ground."

"That is to cheat her," said the third. "Hark here, Bebee; my sister, who is a lone woman, as you know well, shall come and bide with you, and ask you nothing—nothing at all—only you shall just give her a crust, perhaps, and a few flowers to sell sometimes."

"No, no," said the fourth; "that will not do. You let me have the garden and the hut, Bebee, and my sons shall till the place for you; and I will live with you myself, and leave the boys the cabin—so you will have all the gain, do you not see, dear little one?"

"Pooh!" said the fifth, stouter and better clothed than the rest. "You are all eager for your own good, not for hers. Now I—Father Francis says we should all do as we would be done by—I will take Bebee to live with me, all for nothing; and we will root the flowers up and plant it with good cabbages and potatoes and salad plants. And I will stable my cows in the hut to sweeten it after a dead man, and I will take my chance of making money out of it, and no one can speak more fair than that when one sees what weather is, and thinks what insects do, and all the year round, winter and summer, Bebee here will want for nothing, and have to take no care for herself whatever."

She who spoke, Mere Krebs, was the best to do woman in the little lane, having two cows of her own and earrings of solid silver, and a green cart, and a big dog that took the milk into Brussels. She was heard, therefore, with respect, and a short silence followed her words.

But it was very short; and a hubbub of voices crossed each other after it as the speakers grew hotter against one another and more eager to convince each other of the disinterestedness and delicacy of their offers of aid.

Through it all Bebee sat quite quiet on the edge of the little truckle bed, with her eyes fixed on the apple bough and the singing chaffinch.

She heard them all patiently.

They were all her good friends, friends old and true. This one had given her cherries a score of summers. The other had brought her a little waxen Jesus at the Kermesse. The old woman in the blue linen skirt had taken her to her first communion. She who wanted her sister to have the crust and the flowers, had brought her a beautiful painted book of hours that had cost a whole franc. Another had given her the solitary wonder, travel and foreign feast of her whole life—a day fifteen miles away at the fair at Mechlin. The last speaker of all had danced her on her knee a hundred times in babyhood, and told her legends, and let her ride in the green cart behind big, curly coated Tambour.

Bebee did not doubt that these trusty old friends meant well by her, and yet a certain heavy sense fell on her that in all these counsels there was not the same whole hearted and frank goodness that had prompted the gift to her of the waxen Jesus and the Kermesse of Mechlin.

Bebee did not reason, because she was too little a thing and too trustful; but she felt in a vague, sorrowful fashion that they were all of them trying to make some benefit out of her poor little heritage with small regard for herself at the root of their speculations.

Bebee was a child, wholly a child; body and soul were both as fresh in her as a golden crocus just born out of the snows. But she was not a little fool, though people sometimes called her so because she would sit in the moments of her leisure with her blue eyes on the far away clouds like a thing in a dream.

She heard them patiently till the cackle of shrill voices had exhausted itself, and the six women stood on the sunny mud floor of the hut eyeing each other with venomous glances; for though they were good neighbors at all times, each, in this matter, was hungry for the advantages to be got out of old Antoine's plot of ground. They were very poor; they toiled in the scorched or frozen fields all weathers, or spent from dawn to nightfall poring over their cobweb lace; and to save a sou or gain a cabbage was of moment to them only second to the keeping of their souls secure of heaven by Lenten mass and Easter psalm.

Bebee listened to them all, and the tears dried on her cheeks, and her pretty rosebud lips curled close to one another.

"You are very good, no doubt, all of you," she said at last. "But I cannot tell you that I am thankful, for my heart is like a stone, and I think it is not so very much for me as it is for the hut that you are speaking. Perhaps it is wrong for me to say so—yes, I am wrong, I am sure—you are all kind, and I am only Bebee. But you see he told me to live here and take care of the flowers, and I must do it, that is certain. I will ask Father Francis, if you wish; but if he tells me that I am wrong, as you do, I shall stay here all the same."

And in answer to their expostulations and condemnation, she only said the same thing over again always, in different words, but to the same steadfast purpose. The women clamored about her for an hour in reproach and rebuke; she was a baby indeed, she was a little fool, she was a naughty, obstinate child, she was an ungrateful, willful little creature, who ought to be beaten till she was blue, if only there was anybody that had the right to do it.

"But there is nobody that has the right," said Bebee, getting angry and standing upright on the floor, with Antoine's old gray cat in her round arms. "He told me to stay here, and he would not have said so if it had been wrong; and I am old enough to do for myself, and I am not afraid, and who is there that would hurt me? Oh, yes, go and tell Father Francis, if you like. I do not believe he will blame me, but if he do, I must bear it. Even if he shut the church door on me, I will obey Antoine, and the flowers will know I am right, and they will let no evil spirits touch me, for the flowers are strong for that, they talk to the angels in the night."

What use was it to argue with a little idiot like this? Indeed, peasants never do argue, they use abuse.

It is their only form of logic.

They used it to Bebee, rating her soundly, as became people who were old enough to be her grandmothers, and who knew that she had been raked out of their own pond, and had no more real place in creation than a water rat, as one might say.

The women were kindly, and had never thrown this truth against her before, and in fact, to be a foundling was no sort of disgrace to their sight, but anger is like wine, and makes the depths of the mind shine clear, and all the mud that is in the depths stink in the light; and in their wrath at not sharing Antoine's legacy, the good souls said bitter things that in calm moments they would no more have uttered than they would have taken up a knife to slit her throat.

They talked themselves hoarse with impatience and chagrin, and went backwards over the threshold, their wooden shoes and their shrill voices keeping a clattering chorus. By this time it was evening; the sun had gone off the floor, and the bird had done singing.

Bebee stood in the same place, hardening her little heart, while big and bitter tears swelled into her eyes and fell on the soft fur of the sleeping cat.

She only very vaguely understood why it was in any sense shameful to have been raked out of the water lilies like a drowning field mouse, as they had said it was.

She and Antoine had often talked of that summer morning when he had found her there among the leaves, and Bebee and he had laughed over it gayly, and she had been quite proud in her innocent fashion that she had had a fairy and the flowers for her mother and godmothers, which Antoine always told her was the case beyond any manner of doubt. Even Father Francis, hearing the pretty, harmless fiction, had never deemed it his duty to disturb her pleasure in it, being a good, cheerful old man, who thought that woe and wisdom both come soon enough to bow young shoulders and to silver young curls without his interference.

Bebee had always thought it quite a fine thing to have been born of water lilies, with the sun for her father, and when people in Brussels had asked her of her parentage, seeing her stand in the market with a certain look on her that was not like other children, had always gravely answered in the purest good faith:

"My mother was a flower."

"You are a flower, at any rate," they would say in return; and Bebee had been always quite content.

But now she was doubtful; she was rather perplexed than sorrowful.

These good friends of hers seemed to see some new sin about her. Perhaps, after all, thought Bebee, it might have been better to have had a human mother who would have taken care of her now that old Antoine was dead, instead of those beautiful, gleaming, cold water lilies which went to sleep on their green velvet beds, and did not certainly care when the thorns ran into her fingers, or the pebbles got into her wooden shoes.

In some vague way, disgrace and envy—the twin discords of the world—touched her innocent cheek with their hot breath, and as the evening fell, Bebee felt very lonely and a little wistful.

She had been always used to run out in the pleasant twilight time among the flowers and water them, Antoine filling the can from the well; and the neighbors would come and lean against the little low wall, knitting and gossiping, and the big dogs, released from harness, would poke their heads through the wicket for a crust, and the children would dance and play Colin Maillard on the green by the water, and she, when the flowers were no longer thirsted, would join them, and romp and dance and sing the gayest of them all.

But now the buckets hung at the bottom of the well, and flowers hungered in vain, and the neighbors held aloof, and she shut to the hut door and listened to the rain which began to fall, and cried herself to sleep in her tiny kingdom.

When the dawn came the sun rose red and warm; the grass and boughs sparkled; a lark sang; Bebee awoke sad in heart, indeed, for her lost old friend, but brighter and braver.

"Each of them wants to get something out of me," thought the child. "Well, I will live alone then, and do my duty just as he said. The flowers will never let any real harm come, though they do look so indifferent and smiling sometimes, and though not one of them hung their heads when his coffin was carried through them yesterday."

That want of sympathy in the flowers troubled her.

The old man had loved them so well, and they had all looked as glad as ever, and had laughed saucily in the sun, and not even a rose bud turned the paler as the poor still stiffened limbs went by in the wooden shell.

(To be Continued.)

Children in a Hotel.

Children in hotel or boarding house are like wild birds in a cage, deprived of their right to fly and swoop and skim the air and to swell their throats almost to bursting with unchecked song. The wild bird droops and mopes and mournfully twitters, instead of singing, and grows disheveled and dirty and unlovely, and the caged child grows weedy and pallid and constrained in its movements and pert and assured in its manners, and before it is adolescent it is a little world weary manikin, blase of all amusements, supercilious to those not so wealthy or so well dressed or so fashionable as its parents and their friends, cynical and agnostic in all its views.—Mrs. Frank Leslie in Philadelphia Times.

German Universities.

Twenty six thousand nine hundred and forty five students have attended the twenty universities of Germany during the winter session which has just closed. At Berlin there were 5,478, at Munich 3,414, and at Leipsic 3,288. Bonn is seventh, with 1,119 students, and Heidelberg is only thirteenth, with 832. Rostock comes last, with 340. Only 1,644 of the students were foreigners. Of the whole, 8,735 students belong to the philosophical faculty, 6,650 to the medical, 5,791 to the theological, and 5,769 to the juristic.

A Novel Scarf Pin.

A novel design was shown to a reporter by a manufacturer, which took the form of a skull mounted upon the top of a stout pin and connected therewith by a fine gold chain. The wearer, by gently pulling the chain causes the lower jaw of the skull to drop while two small diamond eyes fall into the sockets, thus giving the observer an inclination to feel uneasy by its ghastly appearance. These pins are expensive, the price depending entirely upon the size of the diamond used.—New York Mail and Express.

Washington Correspondents.

The correspondents, as a rule, are high toned gentlemen, and a corruptionist would sooner think of approaching a congressman with bribes than them. Many of them receive salaries as large as those of the congressmen, and the only great difference in the two positions is that the correspondent is here as long as he does good work, and the congressman's head goes off, as a rule, at the end of two or four years.

The trade in birds for women's hats was so enormous last year that a single London dealer admitted that he sold 2,000,000 of small birds of every kind and color. At one auction in one week there were sold 6,000 birds of paradise, 5,000 Impeyan pheasants, 400,000 humming birds, and other birds from North and South America, and 300,000 feathered skins from India.

Husband (consumed with laughter over one of his own jokes)—Ha, ha, ha, n-not bad, eh? Wife—No; but, John, you ought to take it to the barber's and have its gray whiskers trimmed.—The Epoch.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles and Itching of the private parts, and nothing else. Every box is warranted. Sold by druggists, or sent by mail on receipt of price, 50c. and $1.00 per box. WILLIAMS M'F'G CO., Prop's, Cleveland, O.

He that loses anything and gets wisdom by it is a gainer by the loss.

IF YOU HAD A FRIEND

About to visit some section of country where malarial disease, either in the form of chills and fever or bilious remittent was particularly rife, what would be about the best advice you could give him? We will tell you—to carry along, or procure on arriving, that potent medicinal safeguard, Hostetter's Stomach Bitters, known throughout malaria plagued regions, here and in other countries, as the surest means of disarming the miasmatic scourage, and robbing it of its fell destructive influence. Not only does it fortify the system by increasing its stamina, but overcomes irregularity of digestion, the liver and the bowels, and counteracts the unfavorable effects of over-exertion, bodily and mental exposure in rough weather, or occupation too sedentary or laborious, loss of appetite and excessive nervousness. The functions of alimentation, bilious secretion and sleep have in it a most powerful and reliable auxiliary.

"I've smoked my last cigar," he cried,
And threw the wasted stump aside.
"I meant," he sighed, in accents sad,
"I'd smoked the last cigar I had."

THEIR ONLY MEDICINE CHEST.

William W. B. Miller, Deerlodge, Montana, writes:

"I have been using BRANDRETH'S PILLS for the last thirteen years, and though I have had nine children, I have never had a doctor in the house except three times, when we had an epidemic of scarlet fever, which we soon banished by a vigorous use of BRANDRETH'S PILLS. I have used them for myself, two or three a night for a month, for liver complaint, dyspepsia, and constipation. In diarrhoea, cramps, wind colic, indigestion, one or two BRANDRETH'S PILLS fixed the children at once. A box of pills is all the medicine chest we require in the house. We use them for rheumatism, colds, catarrh, biliousness and impure blood. They never have failed to cure all the above complaints in a very few days."

Brilliant Effusion of the Smart Boarder—Mrs. Slimdiet—What part of the chicken shall I give you, Mr. Goodfeed. Boarder—All but the neck.

STATE OF OHIO, CITY OF TOLEDO, } ss.
LUCAS COUNTY.

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., doing business in the City of Toledo County and state aforesaid, and that said firm will pay the sum of ONE HUNDRED DOLLARS for each and every case of Catarrh that cannot be cured by the use of HALL'S CATARRH CURE. FRANK J. CHENEY.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1886.

A. W. GLEASON,
(SEAL) *Notary Public.*

Hall's Catarrh Cure is taken internally and acts directly upon the blood and mucous surfaces of the system. Send for testimonials, free.
F. J. CHENEY & CO., Toledo, O.
☞ Sold by Druggists, 75 cents.

The most contemptible are generally the most contemptuous.

A Cough, Cold, or Sore Throat should not be neglected. *"Brown's Bronchial Troches"* are a simple remedy, and give immediate relief. *Sold only in boxes.*

Gentleness makes children endurable, women lovable and men admirable.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

A BIG FLOOD.

The only thing that will wet a man who wears a "Fish Brand Slicker" is a flood; but even then he must be under water. This statement may seem strong, but a coat that will stand a two days' storm without leaking, and will not rip or tear, is sure to fill the bill. The additional advantage is that it costs less and wears longer than any other waterproof coat. Have you one? If not, why do you wait until it rains? Sold everywhere. Buy it now. It is a great mistake to wait until it raises to buy a waterproof coat. The time to buy is when the dealer has a clean, fresh stock. Be sure the coat is stamped with the "Fish Brand" Trade Mark, and you will get the best waterproof coat ever made. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER, - Boston, Mass.

Children always Enjoy It.

SCOTT'S EMULSION

of pure Cod Liver Oil with Hypophosphites of Lime and Soda is almost as palatable as milk. Children enjoy it rather than otherwise. A MARVELLOUS FLESH PRODUCER it is indeed, and the little lads and lassies who take cold easily, may be fortified against a cough that might prove serious, by taking Scott's Emulsion after their meals during the winter season.

Beware of substitutions and imitations.

PENSIONS! NEW LAW CLAIMS. Apply to MILO B. STEVENS & CO., Atty's, 1419 F St., Washington, D. C. Branch offices, Cleveland, Detroit, Chicago.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted ..... Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

The less heard a man has the less frequently he losses it.

CONSUMPTION SURELY CURED.

TO THE EDITOR—Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption if they will send me their express and post-office address. Respectfully,
T. A. SLOCUM, M. C., 181 Pearl St., New York.

What a curiosity a newspaper would be that was edited by the people who are always growling about the papers.

CHINESE EXECUTION.

Photograph Taken of the Criminal's Death.

BARARIOUS METHODS OF EXECUTING.

The Government Tried to Suppress the Sale of Pictures.

W. F. Magee, the purser of the steamship Belgic, which arrived from Chinese ports at San Francisco recently, has in his possession a photograph of the extraordinarily brutal method of execution as practiced under the name of Ling Chi or the Thousand Cuts.

The photograph, which is a graphic reproduction of the sanguinary scene, was obtained in a curious way. One of the Belgic's engineers, named Tharp, hearing that the execution was to take place in Canton, made his way there determined to witness it, and if possible obtain a photograph of it with an instantaneous camera.

Arriving at the scene of the execution he concealed the camera under his coat and managed to get a good view of the extraordinary sight. The condemned man, who had been found guilty of the murder of his brother, was first tied to a stake. The mandarin who had charge of the ceremonies gave the order to the executioner to proceed, and in a very few moments the sharp knives had severed first the breasts and the thighs from his trunk.

Next the arms and legs were cut off with the swift, sure stroke of the executioner's blades, and still the mutilated victim made no sign of suffering or appeal for mercy. At a sign from the mandarin the executioner with one blow severed the head from the body and released the sufferer from his intense agony.

This was the moment that the photographer seized for the realization of his purpose. He elbowed his way through the crowd to the edge of the circle in which the bleeding and dismembered body lay, and before any one realized what he was doing he had obtained a photograph.

As soon as the mandarin knew what had been done he ordered the arrest of the engineer, but Tharp had been too quick for his pursuers and managed to regain the ship before they were fairly after him. A demand was made for his surrender, but of course was refused. Tharp sold the negative to a photographer in Hong Kong, and the latter could not print the pictures fast enough to supply the demand for the ghastly relic.

The Chinese government endeavored to secure all the pictures by purchase, but when they found that the plate was capable of reproducing them as fast as they could be printed the effort at suppression was given up. Mr. Magee will have his horrid picture mounted and framed and purposes to have a number of copies made of it for his friends.—San Francisco Examiner.

Picking Up Money.

Any one who observes a trackwalker on any of the L roads cannot help observing that when he comes to a station he makes his way under the platform, and is lost to sight for several minutes. Seeing one of these gentlemen so engaged, curiosity prompted me to ask the reason, when he replied that he was looking for money. "People coming from the ticket office window," he said, "are often in such a hurry to catch a train that when any one jostles them they lose their change.

"Sometimes it drops on the platform, but in the majority of cases it rolls into the gutter underneath. By searching the latter carefully I have often picked up as much as $5 in a day, made up of all kinds of coins. I have often picked up in the same way some valuable ornaments. It is not so remunerative now as formerly, however, as the gatemen have caught on to the little mine. Whenever you miss a gateman from his box, in nine cases out of ten he will be under the platform searching the gutter.—New York Star.

Costly Walking Sticks.

A curious collection of walking sticks was recently sold in London. It consists of half a dozen walking sticks, dating, most of them, with the beginning of the century, and showing well what were the dandy proclivities of the period. Ivory and tortoise shell are the chief materials, not of the handles, but of the sticks themselves, the handles being of much more precious stuff. One is of ebony, with a gold top. The top opens like a circular snuff box, and in concentric rings are, as an inscription records, locks of the hair of three English princesses. Diamond eyed snakes, with enamel heads, are the decorations of this costly walking stick, which is very heavy and nearly four feet long. Pope has a line praising a fop famous for "the nice conduct of a clouded cane." One of these canes is here, the handle of clouded amber. A stout hazel set in gold, which is among the collection, comes nearer the utilitarian tastes of today.—Philadelphia Ledger.

Education in Japan.

The people of Japan are greatly interested in the education and elevation of women. In 1887 there were 128 new schools and societies for girls and women established in that country. These are in addition to the public schools, which have long existed.—Public Opinion.

Dr. Honocque, of Paris, has invented a new spectroscope for investigating the changes in the blood. It is expected to prove of importance in studying nutrition.

Russian Convicts and Their Chains.

While a number of convicts were engaged in games of hazard in the corridor, most of those in the rooms were absorbed in another occupation. Heavy metallic strokes rang through the prison, the falling of chains upon the floor could be heard from time to time, but the noise disturbed nobody, neither those who were fast asleep in the same rooms nor the commanding officer or the soldiers who slept in the same building. The convicts worked on the solution of one problem, namely, on making the chain rings embracing their legs so extended as to be in a position to take them off or push them on over the ankles and the foot heels at any time. Thus the chains could be carried on the soldier or around the waist, instead of around the legs, and walking was much easier.

Of course, the soldiers and their commander knew well what the metallic sounds meant, but they did not care to interfere. Some of the escort officers were good natured men, and paid no attention to these "little transgressions" of the law; others were strict and rigid, not tolerating any such liberties on the part of the convicts, and as the latter had a marvelous ability for "sizing up" their commanders, they marched one day with the chains around their legs and another with the chains around their waists. Many of the convicts managed to throw off the chains even from their arms. These being very short, give such a posture to the wearer as to render his ten or twelve hours' march extremely difficult. The contact of the iron of the chains, moreover, occasions, in the bones during the intense Siberian heats or frosts, an insupportable rheumatic pain, which after several weeks of walking becomes a real torture.—Michael Malkoff in Chicago News.

A Novel Test in Tasting.

A novel bet was won and lost in a Vine street resort the other evening. A party of gentlemen were indulging in a social glass, and finally the conversation turned upon the quality of liquors and the ability of certain persons to judge them by the sense of smell and taste. One man in the party claimed that the best judges could be fooled by the compounders, and, after the argument became quite warm, made the astounding assertion that a large percentage of bar patrons did not know what they were drinking.

The debate grew hotter and hotter, and finally the man who had advanced such outrageous ideas offered to bet a basket of wine that he could confound any one of the party so that he could not tell water from whisky. John Hummel, the circus man, who has had a varied experience in the drinking line, accepted the wager, and the preliminaries began. John was first heavily blindfolded, and then a number of glasses, containing water, milk, whisky, sherry, claret, Rhine wine and gin were set out on the bar. They were handed to the blindfolded man one at a time, and he was told to name the liquor after tasting it. He got through the list bravely until he came to the gin, which he called port wine. Then the man started him back, but it was soon very evident that Hummel's palate had lost its power. He called milk water, and finally was forced to admit that all the liquors tasted alike, and that he had lost his bet. It was some time before he was able to enjoy the wine he had lost.—Cincinnati Enquirer.

Excessive Eating in Gotham.

From the 1st of December to the last of April, dinners are in order, and many fashionable folk scarcely dine at home once a month unless they play host under their own roof. How they manage their digestion I know not, for a season's elaborate dinners are enough to disturb the interior of an ostrich. I am aware that cooking of the Careme kind claims to insure eupepsy; but, while this may be true in theory, it is not in practice. Scores of men die here annually from excessive dining out, and I am acquainted with dozens who have lost their health from the same cause. Women seldom suffer, because they are not educated, and cannot be educated into epicures. If they are tortured by gout it is usually an inheritance; most men earn their gout by protracted stomachic abuse. Excessive eating, say experienced physicians, destroys as many constitutions as does excessive drinking. And excessive eating is the bane of New York society men and men of leisure, who are represented by round, protruding eyes, double chins and oleaginous complexions—"Deuceace" in Globe-Democrat.

In California's "Flush" Days.

It was the "flushest" kind of a "flush" time. The years 1852 and 1853, especially the latter, were years of rapid growth as well as unexampled prosperity. Everything flourished. Fortunes were made in a day. Some idea of the ease with which money was gained and the prodigality with which it was spent may be derived from the following entries in an old ledger of a general store of that period: "One candle, $3; 1 dozen French sardines, $35; 2 white shirts, $40; 200 pounds of white flour, $50; 1 fine tooth comb, $6; 1 tin pan, $9; 1 barrel of mess pork, $210." Whisky was 50 cents a drink, and butchers' knives, with which miners picked gold from the crevices of the rocks, sold for $30 each. Adventurers, villains and scoundrels from every quarter of the globe flocked here in greater numbers than ever before. The extravages, the dissipations, the complete abandonment to self indulgence and sensual gratification, the sudden ups and downs of fortunes, and all the other evils of such a state of society were rampant.—San Francisco Cor Chicago Times.

Learning Foreign Languages.

It is claimed that, generally speaking, an aptitude for learning foreign languages is indicative of a low degree of intellectual power, and results from the contentration of the lower intellectual faculties upon such mechanical effort without the distracting influence of the higher reasoning powers.—Globe-Democrat.

Physician's Wife—Are your affairs in bad shape, John? Physician—Yes, but I hope to pull through. My creditors have extended my paper to the middle of the watermelon season.

OLD CHICAGO.

Reminiscences of the Great Western Metropolis.

ONLY THIRTEEN HOUSES FIFTY YEARS AGO.

How Chicago was Saved From an Indian Massacre.

"My father took a claim on the North Side near the river and not far from Mr. Clybourne's," said Mrs. Mary Ann Draper. "Here we lived for quite a long time. I have gone through many dangers and hardships on the North Side in early days. The Indians were numerous and were always coming and going. Sometimes they were friendly and sometimes they were not. My father always had his gun and sword by the bed at night and a dog in the house. Often he would not remove his clothing. The Indians would come up and go around the house, and now and then strike their tomahawks into the logs and cry, 'Chan in chan muck-a-mu—no good white man.' I don't see why they didn't kill us. They did kill one man and woman just before they 'treated.' They hung the man up in the woods and threw the woman in the lake.

"I think there were only thirteen dwelling houses, all told, when I came to Chicago. My father helped to build the famous Green Tree Tavern. These houses could not all be seen at one view. The grass was south, and all the North Side nearly was covered with very heavy woods. Wild rice grew in the river, and beautiful white and yellow pond lilies were to be seen along the shores. I had several adventures and some narrow escapes.

"But I want to tell you how, I sometimes believe, I saved Chicago from a massacre. This adventure I call my bridge disaster. I was about 13 years old then, and we lived on the North Side, near the junction of the north and south branches of the river. Mother wanted me to go to market. So I took the basket on my arm and started for the only bakery then in Chicago, which was on the West Side, and also for the only meat market in town, which was on the South Side, where Mr. Clybourne had his shop. Near the two rivers was a pole bridge which I had to cross. I went over all right and secured my bread and meat, but on my return I found the bridge blockaded with Indian ponies, and I should say there were about 2,000 savages in that vicinity. The ponies were stationed on the bridge in such a manner that it was supposed no one could get through. But I passed over with my basket by going along on the ends of the poles outside of a rough railing. At the farther end stood a big Indian with a long knife in his hand. I shied around him, too, and had gotten fairly over only when the bridge broke down and tumbled poles and ponies pell mell together in the river. A thousand war whoops seemed to rend the air, and the big Indian whooped the loudest of all, and, lifting his great knife, started after me.

"Run! I should think I did. I ran through a house near by quicker than I can tell it, and the Indian after me. I dodged into a thicket of wild apple trees, and got into the woods and made my escape. But I did not feel safe until my long hair was shorn off and my disguise so complete that the Indians would not recognize me. This racket called out the garrison at the fort. The drums beat, and even my brother ran around, crying out 'The war's commenced, the war's commenced, get your guns ready quick.' Alexander Robinson, the chief of the tribe, used to tell me that the Indians thought I had bewitched the bridge and brought on the calamity, and therefore tried to kill me. Later in the day, however, they changed their minds and said I was a fairy sent by the Great Spirit to punish them because they would not 'treat' with the white men. The treaty was agreed upon that very afternoon, and peace, instead of a massacre, prevailed. Thus, I expect I helped to save Chicago."—Chicago Herald.

Effects of Absinthe Tippling.

The young men are cultivating absinthe, and when the present generation reaches middle age the absinthe tippler will be one of the frequent guests at our hospitals, which are now full of drunkards and narcotic takers. I am now treating a man who has reached the last stage. The effects are fearful. It is a drink that serves as a powerful stimulant at first, but is the most injurious in the end because of its strength. It is easy to drink absinthe to excess because it requires such a small quantity to do the work.

The intoxication it causes is exhilarating and pleasant, but after it is drank to excess the digestive organs are destroyed and the appetite ruined. With the effects worn off comes a terrible thirst, with giddiness and a tingling in the ears, mental depression and finally hallucination and loss of brain power. The symptoms of an excessive drinker breaking down are muscular quiverings, loss of physicial strength, emaciation and a sallow complexion. Paralysis finally sends him to the grave.—Physician in Globe-Democrat.

How a Steamer Got Ice.

The United States fish commission steamer Albatross, Lieut. Commander Z. L. Tanner commanding, recently arrived in port, having spent nearly a month in the Straits of Magellan, where large collections were made in all branches of natural history. Fishes of excellent quality for eating were there seined in great quantities. Vessels passing through the straits, if supplied with seines, could thus obtain an abundance of fresh food. Camps of Fuegians were visited and considerable ethnological material was obtained from them for the National museum at Washington.

In Eyre sound icebergs are usually to be found floating, as many glaciers flow into the water there. The Albatross ran into this sound and made fast to a berg for the purpose of getting a supply of ice for her refrigerator. Huge blocks were then cut off and hoisted in until six tons had thus been taken aboard. The ice was clear and compact and lasted until the arrival of the ship here.—Panama Star and Herald.

A Pertinent Question.

For the third time little Tommy Figg had asked his father what was the cause of the Desert of Sahara. Finally the old gentleman laid down his paper and answered: "I reckon it was formed when the Israelites lost their sand. And if you don't quit asking me so many questions I'll see that your mother puts you to bed before I get home hereafter." "But, pa, how can you see her put me to bed if she puts me to bed before you get home?" And that question was Tommy's last for that evening.—Occident.

Modern Civilization in France.

The personal effects of Marie Regnault, the murdered mistress of Pranzini, have been sold at public auction at the Hotel Drouot. There was a terrible crowd, including many ladies of fashion and aristocratic rank. All the effects of the dead woman were sold, including her clothing, and almost fabulous prices were paid. For example, a pair of blue silk corsets brought $37. A trashy novel which she was reading just before she was killed brought $25; the publisher's price of it is 75 cents. The blue silk stockings which she had on when she was killed were purchased by a Russian countess for $48. A basin in which Pranzini was said to have washed the blood from his hands after the murder brought $15. A chiffonier, on which are to be seen the marks of his bloody fingers, brought $85. A heavy coat of waterproof transparent varnish has been put over the finger marks to prevent them from being obliterated. A pair of common silk garters brought $5 each.

One lady, a rich banker's wife, paid $32 for a pink silk undervest, considerably worn, and at once stripped off the half dozen buttons and sold them for $2 apiece. A tooth brush brought $4 and a shoe buttoner $3, though neither cost over 50 cents new. A wife of a deputy wears a brooch containing a tiny gallows noose made of Pranzini's hair, and another lady, a duchess, has set in a ring one of the handsome teeth for which the murderer was famous. She bribed the executioner to knock it out of his jaw for her, as soon as he was dead. As is well known, the corpse of Pranzini was completely skinned, and the tanned hide made up into pocket books, card cases, and other souvenirs, which are highly prized.—The Argonaut.

Oscar and His Magazine.

I met Mr. O Wilde not long since in London. He stood on the corner of Bond street and Piccadilly delivering a series of deep, guttural and heart felt reflections on the mud, and particularly at a large and lavish display of it that had been spread over his attire by the wheel of a passing hansom.

A woful change has come over the erstwhile apostle of æstheticism. Where a waist once existed there is now a billowy, bulging and complacent protuberance that wots not of sunflowers and lilies, nor yearns for sickly yellows and pallid greens. It indicates instead a rampant, clamorous and passion tossed yearning for beer that has been met by a generous hand. Mr. Wilde's outline would do credit to an alderman. His reddish hair was clipped close and topped by a beaver hat in a cocky sort of way, and his trousers were rolled up in a fashion that allowed the observer's eye free play over a pair of sturdy walking boots. As a matter of detail it may be added that the trousers (the pet aversion of the former æsthete's life) were ill fitting and bagged at the knee. Mr. Wilde's increasing corpulence has destroyed the strong lines of his face, but added an element of rubicund good nature. He was ruddy and comfortable looking.

"I suppose," he said, before we separated, "that you remember some of the remarks I used to make about journalism?"

"I have a vivid recollection of a speech you made one night at the Lotus club in New York, in which you denounced 'the ink stained creatures of the press.'"

"Ah, yes. Well, I'm one of them now. My magazine is my only aim."

He is making a success of it, too. It is one of the few instances where a man of violent enthusiasms becomes a money maker.—Blakely Hall in New York Sun.

Professional Artists a Terror.

Art stores and the dealers in artists' supplies are not supported to any degree by professional talent, as in fact no dealer cares to cater to that class of trade. Professional artists are a terror to business men, for they seem to have no ideas of ways and means of transacting business, and think it all the same whether they pay in a day or a year. Then the successful men want you to toady to them and submit to insolent reflections on the contracted ideas of all engaged in trade. They will force their pictures on the public whether the execution is good, bad or indifferent, and when the dealer remonstrates they turn a scornful nose and caustically comment on the terrible lack of art culture among the uneducated.

There are men in the art supply business who have informed me that their most sincere wish was that a real professional would never cross the threshold of their stores. The artists who have had sense enough to forego the ambition to become famous and turned their pencils and brushes into commercial work have found a reward commensurate with the cost of early training. There are a dozen commercial artists in St. Louis who today claim incomes ranging from $3,000 to $6,000, that lift them from the penury and uncertainty of a Bohemian whose life is devoted to catching the public fancy. The public is too whimsical, and although you may captivate it for awhile, fashion will lead the crowds away from yesterday's favorite.—Charles E. Ault in Globe-Democrat.

A Disappointed Young Man.

One of the girls in fashionable society in New York made up her mind to get married the other day, and after confiding her intention to her father, she said: "What do you intend to do for me?" The father was a wealthy man, and thought he was showing a liberal spirit when he answered: "Well, I will give you $100,000 to buy a house and $25,000 to furnish it with." "And what will you give me to live on?" the young lady demanded, with a dissatisfied look on her face. "Oh, I will allow you the interest on another $100,000," replied her father. "But my chef will cost at least $1,200 a year. How do you think I can possibly manage with so little?" The father looked slightly grieved, but only said: "That must do while I am living; you will probably have more when I am gone." The young man who was interested in hearing the result of this conversation between father and daughter said when he heard it: "He might at least have given her two millions." The marriage did not take place.—New York Press "Every Day Talk."

Sensational Newspapers in England.

All the murder gazettes are not published in this country. Here, for instance, is The Weekly Courier, of Liverpool, England, which recently published the following advertisment: "Remarkable Murder Trials. New Stories of Old Crimes.—There will shortly be begun in The Weekly Courier a series of articles, giving detailed and graphic accounts of some of the murder trials which have taken the deepest hold on the public mind. Special attention will be given to remarkable trials of local interest in Liverpool and Lancashire. Each article will trace the crime from its inception, describe its methods and incidents, the efforts of the culprits to elude pursuit and capture, the incidents of the trial, and, finally, the execution of the convict—usually at Kirkdale gaol, in the presence of vast multitudes of people."—New York Tribune.

THROUGH THE AIR.

"Zazel" Describes how to Make a Safe Jump.

WHY YOU SHOULD HOLD YOUR BREATH.

A Public Exhibition of a Jump Into a Fire Net.

Since the publicity which has been given my jump into the net used by the fire department I have received so many letters that I find it impossible to answer each individual. The following covers, to a great extent, questions that are asked; at the same time the replies may be found useful.

Before jumping the first essential thing is to draw into the lungs as much air as possible. Then hold the breath. As the time occupied in making the descent into the net is but a few seconds, it does not require practice to comply with this request.

"Why should the breath be held?"

This is asked in many forms and as many times.

The expansion of the lungs aids to support and retain in place most of the internal organs. The air acts as a cushion. It enables the body to offer resistance to the atmosphere, making the body fall with less force, and serves to lessen the shock which comes the moment the body strikes the net. The same effect is produced in jumping into the water.

Hold the elbows close to the side. Fore arm almost at right angles, slightly in front of body, with hands closed. Bend knees just a little, with feet extended forward. Keep head inclined forward; set the chin firmly on chest, and under no circumstances throw the head back.

The position in falling should be about the same as a person assumes when seated in a chair. Keep all the muscles as rigid as possible. The act of holding the breath will aid in this. Use but little exertion in making the leap. Spring lightly forward and outward, not downward. The latter motion will take care of itself. Jump as if about to cross a small ditch with land on each side of equal height.

When the net is struck the muscles will at once relax, and, rebounding in the air, the body will fall again without pain or injury. Avoid swinging the arms or spreading the limbs while in the air. To do either is to invite liability of breaking limbs. Any sudden motion will have a tendency to revolve the body or cause it to deviate from its course.

Your readers will find it to their interest to practice inhaling and retaining the air as long as possible within the lungs. It will expand and develop the chest. In this country we have the fault of eating quick and breathing too fast.

If height causes hesitation do not look down. Keep the eyes fixed straight forward. Then go. Remember our brave firemen are as anxious to save your life as you are to retain it. In my endeavor to show how safe it was to jump into the net now in use I wore ordinary street costume in my leap. My watch did not stop. This fact ought to inspire confidence to those who may need it in case of fire.—"Zazel" (Mrs. G. O. Starr) in New York Evening Sun.

Children in the Hotels.

"Yes, indeed, we entertain a decided antipathy to children, and have good reasons for it, too," said the day clerk of a high priced hotel on upper Broadway.

"How is that?" inquired a reporter. "I thought every good natured person was fond of children."

"Oh, yes; no doubt they are nice, but a hotel is no place for them unless it be devoted exclusively to the use of families. There are not more than a half dozen first class hotels in this city where children are welcome. In the first place, they are more trouble than they are worth, and in the second place they serve to keep away profitable patrons. Now in every hotel from one end of the town to the other notices are posted in all the rooms to the effect that children must not make a playground of the corridors, or ride in the elevators for the sake of enjoying pleasure excursions. It is impossible to enforce either rule. With one or two exceptions New York hotels are largely patronized by business men from other cities. These are the transient guests, and they are the most profitable. They do not, as a rule, take their families, and, although they may be fond of their own offspring, they decidedly object to put up at a hotel where other people's youngsters are whooping things up in the corridors, or upsetting dishes in the dining room. Then, again, just think of an old bachelor sleeping, or trying to sleep, in a room adjoining that occupied by a teething infant. Why, he would pay his bill and leave the following morning. Oh, no; there is no money in children for any hotel."—New York Mail and Express.

Size of Boston Common.

As is well known to Bostonians through the medium of New York papers, the dwellers in this city are morbidly sensitive to any disparaging reflections on the size or beauty of the common. As this sensitiveness is shared by old and young, the feelings of a young lady who took her little country cousin, aged six, to see the common must have been hurt by the calmly critical way in which he looked it over.

"This is Boston common, Willie," she said; "what do you think of it?"

"It's a pretty yard!" responded the youthful visitor. "A big yard, but it ain't as big as our front yard down home."—Boston Transcript.

Pinions Are Wings, But——

Bowles—Mr. Stiffany, I would like you to fix the wings of this watch.

Stiffany—Wings? I do not understand you.

Bowles—Perhaps I haven't got it right. What are those appendages by which a butterfly is enabled to fly? Pin—pin——

Stiffany—Pinions?

Bowles—Oh, yes; fix the watch's pinions.

Stiffany—Oh!—Jewelers' Circular.

Optional Courtesies.

Among optional courtesies may be enumerated that which governs the conduct of persons in crowded public conveyances. South of Mason and Dixon's line no man would brave public opinion by remaining seated when a woman maintained a standing position, even were she the humblest of her sex. A foreigner would argue in such a case that he had paid for his seat, and that there could be no more reason for his rising in a street car than if he were occupying a seat at the opera or at a hotel table.

In New York, which is too cosmopolitan a city to be cited as an example, street car etiquette is decidedly variable, and whether or not it is necessary to vacate a seat in a lady's favor is a much mooted question. One thing is certain, and that is, that youth and beauty appeal to both high and low, even the most boorish individual being willing to relinquish his rights in favor of a woman with a pair of bright eyes and a stylish figure.

The poor wage worker, in her faded cotton gown and with fingers showing evidences of toil, is rarely the recipient of such courtesy. The man in broadcloth, who has been seated in his luxurious office most of the day, keeps his seat without a qualm of conscience, and holds his paper before his face to obstruct the view of the appealing eyes and worn figure.

Women in public vehicles often exhibit a remarkable selfishness and a total disregard for the comfort of others. Many of them accept a seat to which they have no legal right with a saucy toss of the head and without recognizing the courtesy by as much as a bow or a "thank you." An audible expression of thanks is the least a lady should offer in exchange for the sacrifice of a place, and this should be tendered as freely to the threadbare clerk as to the dude in fine raiment.—Jenness-Miller Magazine.

Looking for Light at the City Hall.

I am building a house. I wanted to get the necessary permission to tap the water main, and went to the City hall for that purpose. I might have gone down into the state of Indiana to have secured the permit, but it occurred to me that I had better ask in Chicago. I stepped into one of the elevators and told the driver what I wanted. He landed me on the public library floor. I soon discovered I was in the wrong place.

I took another elevator, and told the driver of that one what I wanted. He let me off somewhere and told me where to go. I followed his directions, and found myself face to face with Superintendent Howland. I didn't ask him, for I saw he was busy. I found an officer in the corridor, and told him what I was trying to get at. He sent me to the place where dog licenses are issued, and a smart clerk in that department laughed at me.

I didn't blame him very much. I met a friend who has been in the City hall since its occupancy, and he conducted me to the proper place. I had lost nearly an hour. Why don't the proper authorities see that men of intelligence are put in places where inquiries are made?—Interview in Chicago Tribune.

The Opal.

While most gems owe their tint to the presence of some foreign coloring matter the many hued and beautiful opal differs. It is opaque, deriving its beauty from the marvelous property it possesses of decomposing the rays of light, and thus reflecting from its polished surface all the colors of the rainbow. It needs, therefore, no brilliant, but appears to the best advantage when alone. It is at present among the most prized of gems, and has held its place for ages.

Mark Antony once offered £170,000 for an opal the size of a hazelnut, but the owner, Nonius, a Roman senator, preferred exile to parting with his treasure. In spite of their value opals are unsafe investments, for time and exposure dim their luster, while their sensitiveness to heat is so great that the warmth of the hand has been known to crack them. The finest stones come from Hungary, and among the Austrian crown jewels are gems of greater size and beauty than that which tempted the Roman emperor.—London Court Journal.

Danger from Musical Instruments.

A French military surgeon has been making researches on wind instruments which had been used by phthisical bandsmen, and warns musicians of the importance of disinfection. He recommends that instruments should be filled with a 5 per cent. solution of carbolic acid, or, in the case of metallic instruments, that they should be dipped into boiling water. These precautions are of the utmost importance when phthisical persons have used the instruments; for it was found in such cases that liquids used to wash them out presented a virulence similar to that of a pure culture of tuberculosis.

Fortunately, the danger is small as long as the interior is thoroughly moist, which of course it usually is; but when an instrument has been lying by for some time, so that the interior has become dry, there is real danger of air containing dried germs of the disease being drawn into the lungs of the person who next plays upon it.—New York Ledger.

A Lion Tamer's Magic Wand.

Science comes along to rob the lion tamer of much of the glory that comes from the danger of his work. There has lately been invented a light wand with an insulating grip for the hand, connected by a flexible wire with a battery, of which the power can be varied at will. An experiment with this form of applied science is said to have been successfully made.—New York Journal.

A grandson of Samuel F. B. Morse, inventor of the electric telegraph, is employed in the electrical division of the patent office at Washington. He has developed an aptitude for the science which has made his name famous, and occasionally contributes acceptable articles to the electrical papers.

PREMATURE BURIAL.

Medical Men Pronounce it a Humbug.

NOT A SINGLE AUTHENTICATED KNOWN.

A Sensational Story From Southampton.

The subject of premature burial has been of late revived in this country by the appearance of sensational paragraphs in the daily press. Not long ago the public were horrified by a story from Leeds of a gravedigger having heard sounds proceeding from a coffin recently buried. It required a coroner's inquest and the evidence of Mr. Scattergood, the lecturer on forensic medicine, to reassure the public that the rumor was false, the deceased woman having died a perfectly natural death, while, although its cause was typhoid fever, the burial had been by no means hastened, and it was clear that death had occurred at the time stated by those around her.

More recently there was a sensational story from Southampton of a clergyman who stopped the interment of a friend, whose funeral he had come from a distance to attend, on the grounds that he saw some sign of life, which proved to be simply his own imagination. So far as this country is concerned there has not been a single authenticated case recorded of premature burial, though there have undoubtedly been cases where persons have revived after apparent death, and many alleged cases of premature burial in addition to those previously alluded to. But all these have the appearance of sensational stories manufactured for the "penny dreadfuls" and those newspapers which thrive on sensation.

Even on the Continent, in America and in other countries, where in consequence of the intense heat burial must take place within twenty-four hours after death, the authenticity of the stories of alleged premature burial has never been proved, and it may be safely asserted that one genuine case would have led to an alteration in the law and the postponement of burial until after a longer period.

In England, on the contrary, there is less reason to complain of too speedy burial as of too prolonged an interval between death and burial. Mr. Seymour Haden's suggestion of burial within thirty-six hours was not favorably received, and is, indeed, for this country too short an interval. A universally exact interval cannot be laid down; it must vary according to the time of year, the weather and other circumstances. In these days of cheap disinfectants a body can be kept without prejudice to the living for four or five days after death, which interval is long enough to satisfy the wishes of the most timid. There is a circumstance well known to the profession which, if it were better known to the public, would go far to reassure those whose minds may have been disturbed by these sensational paragraphs.

Every day bodies apparently lifeless are received at metropolitan and provincial hospitals, having been found in every variety of posture, clothed, half clothed or naked, and under varying circumstances. At the hospital the resident surgeon must give a prompt and decisive answer to the question, "Is he (or she) alive or dead?" To send a corpse to the ward or to keep it unduly long in the reception room would be a very stupid blunder; to send a living person to the dead house would be a crime. These cases amount in the aggregate to thousands annually, and yet we have never heard of a mistake being made. It is probably this circumstance which makes members of the profession skeptical of these stories of so called premature burial, and causes them to reject with an incredulous smile the suggestion that so horrible a fate might occur to any of us.—London Lancet.

When Traveling.

I cannot imagine why people are so suspicious of one another in this world. Start a car full of people out of a depot, and for the first hundred miles of the way they look askance at each other, as though doubtful whether to keep their pocketbook under watch or not. This world has lots more nice people in it than bad, just as a summer meadow has more flowers and birds than snakes. Only cowards and idiots go through the land ignoring all the wealth of blossom, all the shadow and shine of summer weather, to keep a perpetual outlook for snakes. Snakes are occasional, but flowers and sunshine, thank God, are perpetual. Do you know, I rather fancy suspicious people are very mean themselves, and knowing their own capabilities for evil they suspect and seek in others the similitude of themselves, as magnetized iron searches out steel.—Chicago Herald.

Women Who Sell Newspapers.

The number of grown women who sell newspapers on the streets is constantly increasing, and today there are eight of them, between 30 and 50 years of age, vending papers at the big bridge entrance and the immediate neighborhood. Some of them are assisted by little sons and daughters, and one has a buxom girl of 17 or 18, whose raven hair and ruddy cheeks attract a great deal if not always respectful attention. There is not much chivalry in the newsboys who do not hesitate to mob a man or haze a boy who intrudes on their posts but they do not interfere with these women, no matter how many cut up their business.—New York Sun.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY FEBRUARY 27 ..... 1891.

Our neighbor has cackled too soon. Like a bantam rooster with the pip, he can't crow. The INDEPENDENT will live when such cattle as he are forgotten. All our interests are here, and we're are going to stay. The INDEPENDENT is entirely free from incumbrance, and there are no strings on it. It is not "owned" nor the tool of any company or corporation, and will always be found fighting for the good of the people, no matter what the result. The late action of this paper is not under taken hastily, but is the result of careful inquiry into the financial affairs of the county, and we are not done yet.

Any decline in the purchasing power of silver is dead loss to every producer in the Nation, whether farmer or other worker. The decline in the value of silver has been steady since it became evident that the gold interest has control of every branch of the Government, particularly of Congress. With the most cold blooded impudence the tools of the gold interest in the Senate and lower House say that it would be dangerous, if not disastrous to do more in favor of silver coinage. By and by, when patience is exhausted, the people will take by force what respectable rascals are now accumulating by fraud.

The melancholy Jaques declared that "Motley's the only wear;" but if he were to look about him now he would see that quackery is far the more profitable habiliment. The frank and true soldier, Sherman, being dead there is not a real MAN apparent to survive him in public life in the Nation. Quacks abound in all public stations, and quackery appears to be the only talent that wins success. In our own State Legislature a measure is proposed that would free politics from the curse of bossism. The bill is placed so low on the file that there is no chance of passing it before final adjournment unless it should be advanced out of its order. But when a motion is made to do this the quacks make a gabble that no bill must be taken up out of its order, and as the quacks have control they carry their point. In that most august assemblage of quacks, the Senate of the United States, one of the members rises to defend himself from a charge of using public funds to gamble with in stocks. The defense he makes is that he did't take the money but he admits that his partner did. Surely this is the very sublimity of quackery. A member of such a body as the United States Senate to deny that he is a thief, but in effect admit that he is a receiver of stolen goods! Surely such a man is among kindred spirits in the Senate, "Pirates all at Pargs," or he would at once be expelled. So many of his brother Senators have bought and paid for the seats they occupy that they dare not expel any member of their body, no matter what he does. Every industry in the country languishes for want of money enough to meet the public needs. But when it is proposed to cure the disease that quackery brought on, and remonetize silver, every quack in the country, led by a President OUT of office and a President IN office, raises his discordant screech and squawks "panic, dangerous measure, benefit silver miners only," etc. etc. and the quacks know that every word of their gabble is a lie. So long as the great mass of human beings get enough to eat and wear they are patient under misrule, or at worst do no more than grumble. Such a time is a golden age for quacks; their brazen impudence and pretence of ability enables them to take the lead everywhere. Such a time we now have, and quacks abound in the public service. But when real, stern troubles arise, then the quacks hunt their holes like rats and mice and other vermin. Quacks are useless then; real MEN are needed; impudence cannot do the work of ability; to save the State are needed Washington, Hamilton, Adams, Franklin, Green, Paul Jones; or Lincoln, Chase, Grant, Sherman, Sheridan and such like. Not quacks these, but men full of truth, and of the strength that truth alone can give. Such a convulsion as would drive the quack vermin to their holes and bring real MEN to the front would be no unmixed evil.

ANTONS SALOON
KEELER, CAL.
In Lake View Hotel

BEER, WINES.
LIQUORS and CIGARS

All kinds of Fancy Drinks, including pure water. A comfortable and pleasant Hall.

PUBLIC NOTICE

Is hereby given that unless the foregoing taxes and costs are paid I will on

TUESDAY,

The 24th Day of February, 1891,

Between the hours of 9 o'clock a. m. and 4 o'clock p. m., to wit, at the hour of 10 o'clock a. m., commence to sell the foregoing described real property at public auction in front of the Court House, in the town of Independence, County of Inyo, State of California, and that I will continue such sale from day to day, according to adjournments, until the whole real property described in the foregoing, or so much thereof as may be necessary, shall be sold, and that I will sell the smallest quantity of each assessment of said property that will be taken by any person for the amount of said taxes and costs, in gold or silver coin of the United States.

Dated this 30th day of January, A. D. 1891.

J. S. GORMAN,
Tax Collector of Inyo county, California.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Sec tion 2,324, Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.
Dated Cerro Gordo, January 2, 1891.

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Charles D. Begole deceased.

IT APPEARING TO THE COURT, BY THE petition this day presented and filed by Thomas Parker, the Administrator of the Estate of Charles D. Begole, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the said Court that all persons interested in the estate of said deceased, appear before the said Superior Court on Tuesday, the 24th day of March, 1891, at ten o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administrator to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

GEO. M. GILL,
Judge of the Superior Court.
Dated February 18th, 1891.

[ENDORSED.]
SUPERIOR COURT, COUNTY OF INYO.
In the Matter of the Estate of Charles D. Begole, deceased.
Order Fixing time and place for hearing petition for sale of Personal Property and Real Estate.
Filed February 18th, 1891.

Religious Services.

Rev. H. J. Winsor will breach in Lone Pine at 11 a. m.; George Creek 2:30; Independence at 7 p. m. Sunday school at Lone Pine and Independence at 2 p. m.

John P. Lee, who killed his step-father at Bodie, has been acquitted of the charge of murder,

The stallion Anteeo has been sold at public auction for $55,000. This is the highest price ever realized for a horse at auction.

Hunters are finding all the quail they want. The birds are plentiful and fat, and it is no trouble to get a bagful any day.

A party at Pittsburg offered Mr. Bonner $12,000 for the privilege of breeding Maud S. to a certain horse, the breeder to own the colt. The offer was refused.

Any one who wants to invest in a choice tract of land under the Eastside canal, now has an opportunity to do so. See the advertisement in another column.

Any one who needs a good horse, or several horses, can find a bargain by applying to Mr. Jacob Vagt at Camp Independence, Post Office address, Independence.

According to the apportionment bill agreed on by the Republicans in the Legislature, Alpine Mono, and Inyo Counties are to remain an Assembly District as at present.

The stage drivers report part of the road to the railroad station in a very bad way. They say that the track is a quagmire where the wheels sink to the hubs in the sticky mud.

At Benton there was two and a half feet of snow on Sunday morning. Some buildings were badly injured by the unusual load and all the Indians that could be found were put to work clearing roofs.

The Los Angeles *Daily Herald* estimates that the orange crop this year will fill four thousand cars. This represents a vast sum of money, and shows a vast increase of prosperity in Southern California.

Mr. Brooks is boring a number of holes to test the character of the ground near Haiwai, where a cut would be made through the pass for the proposed canal to Salt Well Valley. So far nothing harder than clay or sand had been struck at a greater depth than the cut would have to be.

The snow storm of Sunday is driving the deer out of the Sierra Nevada mountains. On Wednesday morning a band of five crossed the valley at Blackrock, and more have been seen at other points. Every winter the deer go from the Sierra to the Inyo range.

On Monday evening the down train was detained several hours by wash-outs. The train left Alvord on time, but between that point and Tibbets Station several repairs had to be made before the train could go over the road. The mail was nearly six hours late at Independence.

If any one knows of a vein of coal, large enough to work, anywhere in Inyo County, or in any adjoining territory, and would like to get capital interested for the development of the same, they will be put in the way of getting such assistance by communicating such facts to the office of the INYO INDEPENDENT.

In the general appropriation bill of the Assembly, six thousand dollars is to be given to our Agricultural District. This is the same as the appropriation made two years ago. The District Fair has been held at Independence four years in succession. It is but simple justice, and would certainly be wise policy, to hold the next Fair at Bishop. It is not likely that any opposition will be offered to this.

Pneumonia continues to cut lives short at Candelaria. Already many have died of the dread disease. Two brothers, J. W. and Ralph Goodwin, were kindly nursing their sick friend, Mr. J. H. McPherson. The latter died, and the two brothers having contracted the disease, both died. The *Chloride Belt* of Saturday says the supply of coffins was exhausted Thursday. Six more were received on Friday, and three of these were used next day.

Mr. Joseph Waterman, who is engaged in business at Livermore, is at Darwin. Mr. Waterman claims to own all of the stock of goods held by the late J. C. Eddy, at Darwin. He also claims the money in bank in the name of Mr. Eddy. The sum is said not to exceed seven hundred dollars. Mr. Thomas Parker, Public Administrator, went to Darwin on Tuesday to look after the property. No will has been found, and it is not possible to arrive at a correct knowledge of the state of the affairs of deceased. It is said that previous reports of valuable property owned by deceased at San Jose are mythical.

Properous Countries.

Mr. and Mrs. A. Freidline have been at Independence all the week, on a visit with their daughter, Mrs. W. Clark. Mr. Friedline came back to Bishop recently from a trip through Idaho, Oregon and Washington. He reports all that region to be prospering, money is plenty and consequently business good. Mr. Friedline says he will go soon to one of those States to settle.

School Report.

During the past month many pupils have been unable to attend school at Independence by reason of a sickness that prevails, something like the grip of a year ago, but much less severe. Now, however, most of the pupils are recovering and the attendance is increasing. The other schools in the valley have had a similar visitation and with like result.

The following named pupils were successful in passing their regular monthly examination, held February 23rd 1891.

George Wood 75 Frank Sherrer 91
Cora Craig, 75.

There were but three pupils neither absent nor tardy during the month, namely,
Minnie Levy. Edna Matlack.
Lizzie Thompson.

Absent or tardy only once:
Jeanette Wood. George Lawrence.
Cora Craig. Jessie Lawrence.
Arthur Mairs.

WHAT BUSINESS MEN REPORT.

One of the oldest business houses in the county, and the best known, is that of N. Rhine, at Independence. Mr. Henry Rhine says: During the past three years we have found money getting scarcer steadily. Farmers do most of their business by barter; they have little or even no money to do business with. What crops they produce they give in exchange for other necessaries and this in turn embarrasses the merchants. The coin paid out for goods imported and for freight thereon, so far as I can judge, much exceeds the total cash receipts for everything sent to market out of the county including ore. This must drain the county of every dollar, and fully accounts for the scarcity of money that all feel. The county cannot remain at a standstill; it must either improve or go backward. It is not improving, so far as I can see, in business.

L. Wood, an old established merchant at Independence, in answer to the question, "How is business?" replied: Business is nothing. Nobody has any money. I send to San Francisco for goods; the freight is equal to half the first cost and must be paid cash down. Farmers must have groceries and clothing; they have no money; they get the goods but the merchant gets nothing to pay his bills with. If business goes on in this way we had better get up and leave the country.

E. Chenot has been in business at Independence for many years. He says: Business is far worse than three years ago; there is no money in circulation. Farmers have no money and cannot buy anything for cash. I find it almost impossible to collect any bills.

Henry Levy has been in the hotel business over twenty years. He says: Business is much worse than ever before. I have hopes that it will pick up during the coming summer, but during the past three years it has been getting worse.

John C. Irwin has been in the saloon business about twenty years. He says business has been getting worse steadily for several years past. Along in the seventies his daily cash receipts exceeded his average monthly receipts the past year or two. Business has been getting steadily worse and he does not see where improvement is to come from.

J. C. Miller is in the saloon business. He says that business has declined very much during the past three years and it takes close economy and careful management to keep even.

Julius Roeper began a butcher business five years ago. He says business has declined steadily the last year or two. Where he formerly sent a wagon twice a week and did a large business now he don't send any meat and his wagon does not go there any more.

J. W. Murphy has a blacksmith shop. He says there is no money to be had; farmers need work done as before, but they do not get any cash and therefore cannot pay it out. Money is much harder to get than three years ago.

H. E. Jiggens attends to a livery business. He says the business has fallen off very much until now there is almost nothing doing. Cash receipts have nearly reached the vanishing point.

Philip Gehrig is a brewer. He says his business has dwindled to almost nothing. Four years ago a good many carpenters were employed in the town replacing buildings destroyed by fire. Then for some months there was money in circulation and he did a fair business. When that work was completed his receipts at once diminished and have kept decreasing ever since. He thinks there will be no improvement during the coming summer as there is nothing in sight to warrant expectation of better times.

W. F. Matlack has been in the blacksmith business many years. He says that while teams were running to Mojave business was good and money plentiful; but when the teams quit business at once declined.

O. I. Mairs is one of the best known hotel-keepers in the county; he says business has fallen off very much in the past three years.

Gus. Stecker is a well known carpenter and builder, a man respected and trusted fully by all who know him. He says his business now amounts to nothing. The only work he has done in a long time occupied him three months last fall and for that he has not yet got a cent and was compelled to secure himself by putting a labor lien on the building and the suit is still pending.

A. J. Davis is a boot and shoe maker and a first class workman. He has been in business at Independence several years and owns a shop and residence. During the past three months his shop has been shut up and he is now mining for a living. He says he did a good deal of work but could not collect enough money to pay for the leather he used, much less to leave him anything for support.

H. P. Carter is a carpenter and builder and an old resident of Independence. He says there is no business in his line and very little for a long time past.

A man employed occasionally during the past three years by C. W. Craig in the *Index* office asked for his wages, or at least a part due him, on Wednesday. Mr. Craig replied that he hadn't a dollar; that he had to pay his butcher bill or get no more meat and was "broke." On a previous occasion he stated to the same party that he had been going behind steadily at the rate of fifty dollars a month.

A CHANGE MUST COME.

It is useless to deny or ignore the fact that times are hard in Inyo County. From all parts of the county men engaged in all sorts of callings have fully and repeatedly endorsed the statements that have already appeared in the INYO INDEPENDENT in regard to the matter. It is not a question of climate, or soil, or water supply. But what are the people who are now here going to do when they find money getting scarcer and scarcer every day, and nothing in sight to hope for improvement. Many of the settlers, the best men in the county, have been on their farms twenty years or more, hoping ever for the good time that was to come. But now they are getting old; they find that their hopes are vain and that their time has been wasted. It was easier to get ten dollars fifteen years ago than it is to get one dollar now. Whether founded in wisdom or not, it is the general belief in the county that nothing can bring prosperity but an outlet south by rail, and of that at present there does not seem to be the slightest probability.

The Telegraph Line.

About two weeks ago the telegraph line from the railroad to the town was put in thorough repair. The snow storm of last Sunday broke down many of the poles, and since then Mr. Henry Rhine has written to the manager of the Western Union at San Francisco, resigning charge of the office at Independence, unless the Company shall put the line in order again and keep it so as the business of the office has fallen off, so that the townspeople will not contribute anything toward the repair of the line, and he will not do it at his own expense.

BEEF CATTLE.

What Is Thought of The Future of The Industry.

The rapid increase of population makes the beef question of greater importance than ever before. During the past ten years there was a great rush into the business of stocking the ranges and this was continued till it resulted in over-production and reduced value of cattle. A heavy reaction set in, helped by the terrible winter of last year, and the Reno *Gazette*, a good authority says, it seems a fair conclusion that the cattle census has now been reduced below the probable requirements of the immediate future. The heavy losses of last winter, in all of the colder northern portions of the grazing regions, where the snow was deep and the storms terribly severe, created a shortage of nearly 5,000,000 head of cattle. By some, it is estimated at not less than 10,000,000. On account of the losses in the herds, as well as the drainage of the surplus by shipments abroad and consumption at home, there has been a heavy decrease in the number of cattle in the United States, while the demand for beef is constantly on the increase. Less cattle were taken into market in 1889 than in 1886, by more than 2,000,000, as shown by the records. The increase will be very slow, comparatively with that of ten years ago, from the fact, as seen by the statistics, that 300,000 cows and heifers were slaughtered last year and hence are not available for breeding at the present time.

Five hundred thousand head of calves have been butchered in the last two years, and not less than 1,000,000 heifers have been spayed during the same time. Hence the shortage which must be felt for at least the next five or six years. The shortage for the present or immediate future market extends all over the east and begins to be felt in all the States and Territories west of the Mississippi and Missouri rivers. Three-year-old fat steers, good, beef-matured cows are not made to order, or in a day. Generally speaking, something should be done toward breeding better cattle and handling them upon a more humane and business like plan. Good blood can now be obtained very cheap as compared with prices which prevailed a few years ago, and breeds have been introduced which show their ability to thrive under ordinary range conditions. But the cattle growing of the future will tend farther and farther away from the dangerous old policies. Fewer cattle, better cared for and protected, will be the new order. Provision for winter feed and shelter will be more thought of. There may not be the vast gains and the vast losses of the earlier years, but there will be a safer business and surer net returns. In this line of progress there is room for effort and investment which will promise well.

A Heavy Fall of Snow.

The children had a glorious time last Sunday at Independence. They had never seen such a spectacle before. The dogs, too, enjoyed it immensely. On Saturday evening snow began falling and next morning was a foot deep. The trees were heavy with the fleecy load, and every clothes-line looked like a great hemp hawser. All sorts of improvised sleighs were got ready, but the sleighing was a dismal failure. The ground being warm the sleighs sunk into the mud and slush and the attempt at sleighing was given up. Toward evening of Sunday rain set in, and by next morning the snow was nearly all gone. This was the heaviest fall of snow seen at Independence in many years.

MUSIC BY Harmony Orchestra

TICKETS ..... Including Supper $3.00

A Move In Real Estate.

On Tuesday morning at ten minutes past three o'clock there was a sharp shock of earthquake at Independence. The shock was accompanied by a rumbling sound that continued while one with moderate haste might count five. Buildings shook enough to make dishes rattle. A strong breeze was blowing from the south, but at the moment of the earth tremor there was a calm, and then the breeze set in as before. The moon was about full [the observer not so] but partly obscured by clouds. So far, no damage by the shock is reported. This is the heaviest earthquake observed at Independence in many years.

An Irish Dividend.

Toward the last of December a party who lives near Independence sent nine head of horses to Los Angeles to sell Soon afterward the owner went to Los Angeles to attend the sale of the animals. Some days ago a merchant at Independence said that the party had to borrow money to get home on, the whole sum that had been realized from the sale of the animals having been swallowed up by expenses. Not much profit in that business for the owner of the horses.

At Candelaria.

Candelaria, like other towns, is plagued with degraded wretches, white Piutes, who supply the far more respectable Indians with whiskey. Last week a meeting of citizens was held to consider the matter, and a Committee of Safety was appointed to deal with any caught repeating the offence. The *Chloride Belt* says the people mean to deal out justice, speedy and sharp, to anyone caught supplying whiskey or any other intoxicating liquor to any Indian.

For Sale!

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND, Independence.

A Poverty-stricken Millionaire!

This seems a paradox, but it is explained by one of New York's richest men. "I don't count my wealth in dollars," he said. "What are all my possessions to me, since I am a victim of consumption? My doctor tells me that I have but a few months to live, for the disease is incurable. I am poorer than that beggar yonder." "But," interupted the friend to whom he spoke, "consumption *can* be cured. If taken in time, Dr. Pierce's Golden Medical Discovery will eradicate every vestige of the disease from your system." "I'll try it," said the millionaire, and he did; and to-day there is not a healthier, happier man to be found anywhere. The "Discovery" strikes at the *seat* of the complaint. Consumption is a disease of the blood—is nothing more nor less than lung-scrofula—and it *must* and does yield to this wonderful remedy.

"Golden Medical Discovery" is not only an acknowledged remedy for that terribly fatal malady, when taken in time and given a fair trial, but also for all forms of Scrofulous, Skin and Scalp Diseases, as White Swellings, Feversores, Hip-joint Disease, Salt-rheum, Tetter, Eczema, Boils, Carbuncles, Erysipelas and kindred ailments.

No one so old that he may not live a year, none so old but he may die to-day.

IF YOU HAD A FRIEND

About to visit some section of country where malarial disease, either in the form of chills and fever or bilious remittent was particularly rife, what would be about the best advice you could give him? We will tell you—to carry along, or procure on arriving, that potent medicinal safeguard, Hostetter's Stomach Bitters, known throughout malaria plagued regions, here and in other countries, as the surest means of disarming the miasmatic scourage, and robbing it of its fell destructive influence. Not only does it fortify the system by increasing its stamina, but overcomes irregularity of digestion, the liver and the bowels, and counteracts the unfavorable effects of over-exertion, bodily and mental exposure in rough weather, or occupation too sedentary or laborious, loss of appetite and excessive nervousness. The functions of alimentation, bilious secretion and sleep have in it a most powerful and reliable auxiliary.

The imagination furnishes us with specters, but the conscience clothes and nurtures them.

CANNOT SPARE THE TIME.

Nelson H. Baker, District Attorney of Westchester Co., New York, writes:

"I have received many letters in reference to my testimonial, lately published, commending ALLCOCK'S POROUS PLASTERS.

I cannot spare the time to answer them in writing, therefore would again say, through the press, that I have found ALLCOCK'S POROUS PLASTERS invaluable as chest protectors and shields against coughs and colds. Furthermore, I have found ALLCOCK'S PLASTERS unequaled for pains in the side, back and chest."

Beware of any faith that does not indicate itself in the daily doing.

You wear out clothes on a wash board *ten times* as much as on the body. *How foolish.* Buy Dobbins' Electric Soap of your grocer and save this useless wear. Made ever since 1864. Don't take imitation. There are lots of them.

The happiness of life is so delicate a thing that it shrinks away even upon thinking of it.

For Coughs, Colds, and Throat Disorders, "*Brown's Bronchial Troches*" have *proved* their efficacy by a test of many years. *Sold only in boxes.*

An ounce of generous praise will do more to make a man your friend than a pound of fault-finding.

THE Chas. A. Vogeler Co., Baltimore, Md.

"August Flower"

The Hon. J. W. Fennimore is the Sheriff of Kent Co., Del., and lives at Dover, the County Seat and Capital of the State. The sheriff is a gentleman fifty-nine years of age, and this is what he says: "I have "used your August Flower for several years in my family and for my "own use, and found it does me "more good than any other remedy. "I have been troubled with what I "call Sick Headache. A pain comes "in the back part of my head first, "and then soon a general headache "until I become sick and vomit. "At times, too, I have a fullness "after eating, a pressure after eating "at the pit of the stomach, and "sourness, when food seemed to rise "up in my throat and mouth. When "I feel this coming on if I take a "little August Flower it relieves "me, and is the best remedy I have "ever taken for it. For this reason "I take it and recommend it to "others as a great remedy for Dys-"pepsia, &c." ⊙

G. G. GREEN, Sole Manufacturer, Woodbury, New Jersey, U. S. A.

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

"I suppose God cares—but I wish they did," said Bebee, to whom the garden was more intelligible than Providence.

"Why do you not care?" she asked the pinks, shaking the rain drops off their curled rosy petals.

The pinks leaned lazily against their sticks, and seemed to say, "Why should we care for anything, unless a slug be eating us?—that is real woe, if you like."

Bebee, without her sabots on, wandered thoughtfully among the sweet, wet sunlight-ened labyrinths of blossom, her pretty bare feet treading the narrow grassy paths with pleasure in their coolness.

"He was so good to you," she said reproachfully to the great gaudy gillyflowers and the painted sweet peas. "He never let you know heat or cold—he never let the worm gnaw or the snail harm you—he would get up in the dark to see after your wants—and when the ice froze over you, he was there to loosen your chains. Why do you not care, any one of you?"

"How silly you are!" said the flowers. "You must be a butterfly or a poet, Bebee, to be as foolish as that. Some one will do all he did. We are of market value, you know. Care, indeed!—when the sun is so warm, and there is not an earwig in the place to trouble us."

The flowers were not always so selfish as this, and perhaps the sorrow in Bebee's heart made their callousness seem harder than it really was.

When we suffer very much ourselves, any thing that smiles in the sun seems cruel—a child, a bird, a dragon fly—nay, even a fluttering ribbon, or a spear grass that waves in the wind.

There was a little shrine at the corner of the garden, set into the wall; a niche with a pit of glass and of the Virgin, so battered that no one could trace any feature of it.

It had been there for centuries, and was held in great veneration, and old Antoine had always cut the choicest buds of his roses and set them in a delf pot in front of it every other morning all the summer long. Bebee, whose religion was the sweetest, vaguest mingling of pagan and Christian myths, and whose faith in fairies and in saints was exactly equal in strength and in ignorance—Bebee filled the delf pot anew carefully, then knelt down on the turf in that little green corner and prayed in devout, hopeful childish good faith to the awful unknown Powers who were to her only as gentle guides and kindly playmates.

Was she too familiar with the Holy Mother? She was almost fearful that she was; but the Holy Mother loved flowers so well, Bebee would not feel aloof from her nor be afraid.

"When one cuts the best blossoms for her, and tries to be good and never tells a lie," thought Bebee, "I am quite sure, as she loves the lilies, that she will never altogether forget me."

So she said to the Mother of Christ, fearlessly, and nothing doubting, and then rose for her daily work of cutting the flowers for the market in Brussels.

By the time her baskets were full, her fowls fed, her goat foddered, her starling's cage cleaned, her hut door locked and her wooden shoes clattering on the sunny road into the city, Bebee was almost content again, though ever and again, as she trod the familiar ways, the tears dimmed her eyes as she remembered that old Antoine would never again hobble over the stones beside her.

"You are a little willful one, and too young to live alone," said Father Francis, meeting her in the lane.

But he did not scold her seriously, and she kept to her resolve; and the women, who were good at heart, took her back into favor again; and so Bebee had her own way, and the fairies, or the saints, or both together, took care of her; and so it came to pass that all alone she heard the cock crow while it was dark, and woke to the grand and amazing truth that this warm, fragrant, dusky June morning found her full 16 years old.

CHAPTER II.

The two years had not been all playtime, any more than they had been all summer.

When one has not father, or mother, or brother, and all one's friends have barely bread enough for themselves, life cannot be very easy, nor its crusts very many at any time.

Bebee had a cherub's mouth, and a dreamer's eyes, and a poet's thoughts sometimes in her own untaught and unconscious fashion.

But all the same she was a little hard working Brabant peasant girl; up while the birds twittered in the dark; to bed when the red sun sank beyond the far blue line of the plains, she hoed, and dug, and watered, and planted her little plot; she kept her cabin as clean as a fresh blossomed primrose; she milked her goat, and swept her floor; she sat, all the warm days, in the town, selling her flowers, and in the winter time, when her garden yielded her nothing, she strained her sight over lace making in the city to get the small bit of food that stood between her and that hunger which to the poor means death.

A hard life, very hard when hail and snow made the streets of Brussels like slopes of ice; a little hard even in the gay summer time when she sat under the awning fronting the Maison du Roi, but all the time the child throve on it, and was happy, and dreamed of many graceful and gracious things while she was weeding among her lilies, or tracing the threads to and fro on her lace pillow.

Now—when she woke to the full sense of her wonderful 16 years—Bebee, standing barefoot on the mud floor, was as pretty a sight as was to be seen betwixt Scheldt and Rhine.

Bebee was as pretty a sight as was to be seen betwixt Scheldt and Rhine.

The sun had only left a soft warmth like an apricot's on her white skin. Her limbs, though strong as a mountain pony's, were slender and well shaped. Her hair curled in shiny, crumpled masses, and tumbled about her shoulders. Her pretty, round, plump little breast was white as the lilies in the grass without, and in this blooming time of her little life Bebee, in her way, was beautiful as a peach bloom is beautiful, and her innocent, courageous, happy eyes had dreams in them underneath their laughter—dreams that went further than the green woods of Laeken, further even than the white clouds of summer.

She could not move among them idly as poets and girls love to do; she had to be active amidst them, else drought and rain, and worm and snail, and blight and frost would have made havoc of their fairest hopes.

The loveliest love is that which dreams high above all storms, unsoiled by all burdens; but perhaps the strongest love is that which, whilst it adores, drags its feet through mire, and burns its brow in heat, for the thing beloved.

So Bebee dreamed in her garden; but all the time for sake of it hoed and dug, and hurt her hands, and tired her limbs, and bowed her shoulders under the great metal pails from the well.

This wondrous morning, with the bright burden of her sixteen years upon her, she dressed herself quickly and fed her fowls and, happy as a bird, went to sit on her little wooden stool in the doorway.

There had been fresh rain in the night; the garden was radiant, the smell of the wet earth was sweeter than all perfumes that are burned in palaces.

The dripping rosebuds nodded against her hair as she went out; the starling called to her, "Bebee, Bebee—bon jour, bon jour." These were all the words it knew. It said the same words a thousand times a week. But to Bebee it seemed that the starling most certainly knew that she was 16 years old that day.

Breaking her bread into the milk, she sat in the dawn and thought, without knowing that she thought it, "How good it is to live when one is young!"

Old people say the same thing often, but they sigh when they say it. Bebee smiled.

Mere Krebs opened her door in the next cottage and nodded over the wall.

"What a fine thing to be 16! A merry year, Bebee."

Marthe, the carpenter's wife, came out from her gate, broom in hand.

"The holy saints keep you, Bebee; why you are quite a woman now!"

The little children of Varnhart, the charcoal burner, who were as poor as any mouse in the old churches, rushed out of their little home up the lane, bringing with them a cake stuck full of sugar and seeds, and tied round with a blue ribbon, that their mother had made that very week, all in her honor.

"Only see, Bebee! Such a grand cake!" they shouted, dancing down the lane. "Jules picked the plums, and Jeanne washed the almoods, and Christine took the ribbon off her own communion cap—all for you—all for you, but you will let us come and eat it too?"

Old Gran'mere Bishot, who was the oldest woman about Laeken, hobbled through the grass on her crutches and nodded her white shaking head, and smiled at Bebee.

"I have nothing to give you, little one—except my blessing, if you care for that."

Bebee ran out, breaking from the children, and knelt down in the wet grass, and bent her pretty sunny head to the benediction.

Trine, the miller's wife, the richest woman of them all, called to the child from the steps of the mill:

"A merry year, and the blessing of Heaven, Bebee! Come up, and here is my first dish of cherries for you; not tasted one myself, they will make you a feast with Varnhart's cake, though she should have known better, so poor as she is. Charity begins at home, and these children's stomachs are empty."

Bebee ran up and then down again gleefully, with her lapful of big black cherries. Tambour, the old white dog, who had used to drag her about in his milk cart, leaping on her in sympathy and congratulation.

"What a supper we will have!" she cried to the charcoal burner's children, who were turning summersaults in the dock leaves where the swans stared and hissed.

When one is sixteen, cherries and a cake have a flavor of Paradise still, especially when they are tasted twice, or thrice at most, in all the year.

An old man called to her as she went by his door. All these little cabins lie close together, with only their apple trees, or their tall beans, or their hedges of thorn between them you may ride by and never notice them if you do not look for them under the leaves closely, as you would for thrushes' nests.

He, too, was very old; a life long neighbor and gossip of Antoine's, he had been a day laborer in these same fields all his years, and had never traveled further than where the red mill sails turned among the colza and the corn.

"Come in, my pretty one, for a second," he whispered with an air of mystery that made Bebee's heart quicken with expectancy. "Come in, I have something for you. They were my dead daughter's—you have heard me talk of her—Lisette, who died forty years or more ago, they say; for me, I think it was yesterday. Mere Krebs—she is a hard woman—heard me talking of my girl. She burst out laughing, 'Lord sake, fool, why, your girl would be sixty now an she had lived.' Well, so it may be; you see, the new mill was put up the week she died, and you call the new mill old; but, my girl, she is young to me. Always young. Come here, Bebee."

Bebee went after him, a little awed, into the dusky interior, that smelled of stored apples and of dried herbs that hung from the roof. There was a walnut wood press, such as the peasants of France and the low countries keep their home spun linen in and their own lace that serves for the nuptials and baptisms of half a score of generations.

The old man unlocked it with a trembling hand, and there came from it an odor of dead lavender and of withered rose leaves.

On the shelves there were a girl's set of clothes, and a girl's sabots and a girl's communion veil and wreath.

"They are all hers," he whispered; "all hers. And sometimes in the evening time I see her coming along the lane for them—do you not know? There is nothing changed, nothing changed; the grass, and the trees, and the huts, and the pond are all here—why should she only be gone away?"

"Antoine is gone."

"Yes. But he was old; my girl is young."

He stood a moment, with the press door open, a perplexed trouble in his dim eyes; the divine faith of love and the mule like stupidity of ignorance made him cling to this one thought without power of judgment in it.

"They say she would be sixty," he said, with a little dreary smile. "But that is absurd, you know. Why, she had cheeks like yours, and she would run—no lapwing could fly faster over corn. These are her things, you see; yes—all of them. That is the sprig of sweetbrier she wore in her belt the day before the wagon knocked her down and killed her. I have never touched the things. But look here, Bebee, you are a good child and true, and like her just a little. I mean to give you her silver clasps. They were her great-great-great-grandmother's before her. God knows how old they are not. And a girl should have some little wealth of that sort—and for Antoine's sake"——

The old man stayed behind, closing the press door upon the lavender scented clothes, and sitting in the dull shadow of the hut to think of his daughter, dead forty summers and more.

Bebee went out with the brave broad silver clasps about her waist, and the tears wet on her cheeks for a grief not her own.

To be killed just when one was young and was loved like that, and all the world was in its May day flower! The silver felt cold to her touch—as cold as though it were the dead girl's hands that held her.

The garlands that the children strung of daisies and hung about her had never chilled her so.

But little Jeanne, the youngest of the charcoal burner's little tribe, running to meet her, screamed with glee, and danced in the gay morning.

"Oh, Bebee! how you glitter! Did the Virgin send you that off her own altar? Let me see—let me touch! Is it made of the stars or of the sun?"

And Bebee danced with the child, and the silver gleamed and sparkled, and all the people came running out to see, and the milk carts were half an hour later for town, and the hens cackled loud unfed, and the men even stopped on their way to the fields and paused, with their scythes on their shoulders, to stare at the splendid gift.

"There is not such another set of clasps in Brabant, old work you could make a fortune of in the curiosity shops in the Montagne," said Trine Krebs, going up the steps of her mill house.

"But, all the same, you know, Bebee, things off a dead body bring mischance sometimes."

But Bebee danced with the child, and did not hear.

Whose fete day had ever begun like this one of hers?

She was a little poet at heart, and should not have cared for such vanities; but when one is only 16, and has only a little rough woolen frock, and sits in the market place or the lace room, with other girls around, how should one be altogether indifferent to a broad, embossed, beautiful shield of silver that sparkled with each step one took?

A quarter of an hour idle thus was all, however, that Bebee or her friends could spare at 5 o'clock on a summer morning, when the city was waiting for its eggs, its honey, its flowers, its cream and its butter, and Tambour was shaking his leather harness in impatience to be off with his milk cans.

So Bebee, all holiday though it was, and heroine though she felt herself, ran indoors, put up her cakes and cherries, cut her two basketfuls out of the garden, locked her hut, and went on her quick and happy little feet along the grassy paths toward the city.

The sorting and tying up of the flowers she always left until she was sitting under the awning in front of the Broodhuis; the same awning, tawny as an autumn pear and weather blown as an old sail, which had served to shelter Antoine Maes from heat and rain through all the years of his life.

"Go to the Madelaine, you will make money there, with your pretty blue eyes, Bebee," people had said to her of late; but Bebee had shaken her head.

Where she had sat in her babyhood at Antoine's feet, she would sit so long as she sold flowers in Brussels—here, underneath the shadow of the Gothic towers that saw Egmont die.

Here Bebee, from 3 years old, had been used to sit beside him. She knew all the people—the old cobbler, who sat next her, and chattered all day long like a magpie; the tinker, who had come up many a summer night to drink a glass with Antoine; the Cheap John, who cheated everybody else, but who had always given her a toy or trinket at every Fete Dieu all the summers she had known; the little old woman, sour as a crab, who sold rosaries and pictures of saints, and little waxen Christs upon a tray; the big dogs who pulled the carts in, and lay panting all day under the rush bottomed chairs on which the egg wives and the fruit sellers sat, and knitted and chaffered; nay, even the gorgeous huissier and the frowning gendarme, who marshaled the folks into order as they went up for municipal registries, or for town misdemeanors. She knew them all; had known them all ever since she had first trotted in like a little dog at Antoine's heels.

So Bebee stayed there.

It is, perhaps, the most beautiful square in all northern Europe, with its black timbers and gilded carvings, and blazoned windows, and majestic scutcheons, and fantastic pinnacles. That Bebee did not know, but she loved it, and she sat resolutely in front of the Broodhuis, selling her flowers, smiling, chatting, helping the old woman, counting her little gains, eating her bit of bread at noonday like any other market girl, but at times glancing up to the stately towers and the blue sky, with a look on her face that made the old tinker and cobbler whisper together: "What does she see there—the dead people or the angels?"

The truth was that even Bebee herself did not know very surely what she saw—something that was still nearer to her than even this kindly crowd that loved her. That was all she could have said had anybody asked her.

But none did.

No one wanted to hear what the dead said; and for the angels, the tinker and the cobbler were of opinion that one had only too much of them sculptured about everywhere, and shining on all the casements—in reverence be it spoken, of course.

CHAPTER III.

"I remembered it was your name day, child. Here are half a dozen eggs," said one of the hen wives; and the little cross woman with the peddler's tray added a waxen St. Agnes, colored red and yellow to the very life, no doubt, and the old Cheap John had saved her a cage for the starling; and the tinker had a cream cheese for her in a vine leaf, and the sweetmeat seller brought her a beautiful gilded horn of sugar plums, and the cobbler had made her actually a pair of shoes—red shoes, beautiful shoes to go to mass in and be a wonder in to all the neighborhood. And they thronged round her and adored the silver waist buckles, and when Bebee got fairly to her stall and traffic began, she thought once more that nobody's feast day had ever dawned like hers.

When the chimes began to ring all over the city she could hardly believe that the carillon was not saying its "Laus Deo" with some special meaning in its bells of her.

The morning went by as usual; the noise of the throngs about her like a driving of angry winds, but no more hurting her than the angels on the roof of St. Gudule are hurt by the storm when it breaks.

The day was a busy one, and brought in good profit. Bebee had no less than fifty sous in her leather pouch when it was over—a sum of magnitude in the green lane by Laeken.

A few of her moss roses were still unsold, that was all, when the Ave Maria began ringing over the town and the people dispersed to their homes or their pleasuring.

It was a warm gray evening; the streets were full, there were blossoms in all the balconies, and gay colors in all the dresses. The old tinker put his tools together and whispered to her:

"Bebee, as it is your feast day, come and stroll in St. Hubert's gallery, and I will buy you a little gilt heart, or a sugar apple stick, or a ribbon, and we can see the puppet show afterwards, eh?"

But the children were waiting at home; she would not spend the evening in the city; she only thought she would just kneel a moment in the cathedral and say a little prayer or two for a minute—the saints were so good in giving her so many friends.

People looked after her as she went through the twisting, picture like streets, where sunlight fell still between the peaked high roofs, and lamps were here and there lit in the bric-a-brac shops and the fruit stalls.

(TO BE CONTINUED.)

Safety Candle Holders.

Children of all ages will appreciate an improved holder of candles and tapers for Christmas trees which promises to put an end to the disaster and disappointment which often ensue from the usual frail fastenings. It is claimed that this holder can readily be affixed to Christmas trees and other articles, such as wall brackets, wire, rope and other lines and supports, however slight, for decorating, illuminating and general purposes. The invention consists of an ordinary candle or taper with a curved base to catch the grease dropping from the candle, and one or more lengths of flexible wire are left free to be twisted or coiled around the object or article to which the holder is to be attached. This little device, by its rigidity when once fixed, insures the tapers burning down to the socket in the exact position in which they are desired.—New York Telegram.

In Hard Luck.

"Well, Quimby, you look very tough. What's the matter?"

"I'm broke and hungry. Can you stake me for a dinner?"

"Certainly I can, but I don't understand your poverty. You had quite a fortune left to you less than a year ago."

"Yes, but I had to hire two lawyers in the matter and I've been trying to get out of debt ever since."—Lincoln Journal.

FIGHT FOR LIFE!

Awful Position of a Young Man.—Thrilling Experience in the Grasp of a Monster.

Like a miserable wretch encircled in the deadly fold of the anaconda, hopelessly struggling against an inevitable fate, is the unfortunate sufferer of Paresis, or softening of the brain. He fights in vain against the cruel monster; he sees his intellect failing; he notices the constantly recurring attacks of forgetfulness and absent-mindedness stealing o'er him and becomming more and more frequent; he sees and realizes that his mind—once the willing servant of his will—is rapidly escaping from his grasp; and his mental sufferings over the consciousness of the fact are indescribable. In this fast American age of ours this dread malady is rapidly increasing. The vital statistics of the last census, as well as those of all the Lunatic Asylums of

the country show this to be a fact. All eminent nerve and brain specialists agree that not alone to mental overwork is this dread condition attributable, but that to follies, excesses and dissipation (bringing on as they do nervous exhaustion, depleted vital force and loss of manly vigor), is the awful curse of Paresis more frequently traced. Statistics show that when one student or brain-worker is affected, a dozen others are men who have led fast lives, or those who suffer from the results of boyish ignorance.

The man who commences to feel the preliminary symptoms of this most insidious and awful disease, realizing his powers are failing, and that something should be done, frequently calls on the average medical practitioner, who, being unable to help him, either laughs at his troubles as "imaginary," or gives him some simple harmless prescription of no benefit whatever. Only from the eminent specialist on brain and nerve diseases, who has devoted a life of study in that direction, can the victim hope for relief, and even the expert is powerless to cope with the disease when it has been allowed to advance too far. Three physicians attached to the medical staff of the Cosmopolitan Dispensary have made diseases of the nerves and brain a life study, and with the aid of modern American and European discoveries in medicine, galvanism and electricity, are having wonderful success in treating such cases. They are able to re-create nerve force, and can assure a speedy and permanent restoration to mental and physical health, strength and vigor in all cases which have not reached an absolutely incurable stage. Hundreds have been cured of various diseases. Among them are Charles Hempler, 55 Davis street; William P. Kane, 1713 Post street; Mr. and Mrs. S. G. Smith, 1705 Market street; Mrs. M. J. McManus, 814 Jessie street; Alexander Wood, 505 Seventh street; I. M. D. Wright, 1324 Florida street; Andrew M. Martin, 48 Ridley street, Peter A. Anderson, 1300½ Stockton street; H. E. Snook, 1021 Market street; Mrs. Michenfelder, 11 Hopeton terrace; Miss Grace Sachs, 4 Lewis street; J. P. Hanson, 211½ Geary street; Mrs. Pauline Voss, 2610 Manchester street; James J. Welsh, 310 Clementina street; Fred Gronsand, William Tell House, Bush street; Miley Dolan, 126 Ivy street, all of San Francisco; C. F. Eckhart, of Gilroy, Cal., A. Astory, of San Rafael, Cal., and others. Write to some of them and learn for yourself. Hundreds of patients are being treated by mail, as our new system of question blanks enables a thorough diagnosis to be made, so that medicines and directions can be sent by mail or express, with assurances of successful treatment. Every character of disease treated. Each visitor seen privately, and all communications received in sacred confidence. Out of town patients write. COSMOPOLITAN DISPENSARY, Stockton, Ellis and Market streets, San Francisco.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted .....

Sold by Druggists and sent by mail on receipt of price, $1.00 per box. J. J. Mack & Co., Wholesale Agents, San Francisco.

The words of men are like the leaves of the trees; when they are too many they hinder the growth of the fruit.

BEWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY.

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, and acts directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co.

Sold by Druggists, price 75c. per bottle.

Always there is a black spot in our sunshine, and it is, even as I have said, the shadow of ourselves.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

The real estate agent never concedes that there is such a thing as "slus of commission."

Beware of imitations of the genuine Seal of North Carolina Plug Cut Tobacco.

Out of the presses of pain
Cometh the soul's best wine,
And the eyes that have shed no rain
Can shed but little shine.

Strange indeed that
A PLAIN THING
like SAPOLIO should make everything so bright, but "A needle clothes others, and is itself naked". Try it in your next house-cleaning

What folly it would be to cut grass with a pair of scissors! Yet people do equally silly things every day. Modern progress has grown up from the hooked sickle to the swinging scythe and thence to the lawn mower. So don't use scissors!

But do you use SAPOLIO? If you don't you are as much behind the age as if you cut grass with a dinner knife. Once there were no soaps. Then one soap served all purposes. Now the sensible folks use one soap in the toilet, another in the tub, one soap in the stables, and SAPOLIO for all scouring and house-cleaning.

A WOMAN'S LUNCH.

A Restaurant Keeper Tells all About it.

THE TIRED LITTLE COUNTRY WOMAN.

A Lady's Sandwich.—Leaving Articles Behind.

In a restaurant where hundreds of women lunch the reporter sat down in the midst of the rustle and swish of skirts and the Babel buzz and hum of soft voices, and consulted the bill of fare. There were salads, ices, patties, eclaires, soup, pickles and coffee, but no steaks, chops or roasts of any kind. The ladies were eating rolls, chocolate cake, buns, charlotte russe and ices, while here and there a little basin of soup or stew was ordered. A tired little woman, presumably from the country, from the multiplicity of her wraps and bundles, was consulting the bill of fare. She read it through, furtively glanced on the other side and then ordered one sandwich and a glass of lemonade. The lemonade not being on tap she moistened her lunch with the cheering contents of a glass of water. Now a lady's sandwich, as furnished in the restaurants, differs from a man's as much as the perfumed scrap of embroidered vanity they call a handkerchief differs from the comfortable half-yard square of linen or silk which men designate by the same name. The lady's sandwich is about as large as a postage stamp cut in two triangles, is thin enough to see through and seems to relish better if tied up with a ribbon bow.

Presently four country women entered, consulted for some time as to what they should order, and finally decided upon sandwiches and tea. Five sandwiches were given them, and when four of them had served their destined purpose a series of words and pokes were indulged in by the worthy chief of the quartet as to the disposition of the remaining sandwich, while she remarked, in an audible whisper: "We'll have to pay for 'em all, and might as well have it." As no one heeded her advice, she appropriated the bit of bread and meat, wrapping it up in a scrap of a torn programme, and stowed it away among the hairpins, handkerchiefs, combs and other miscellaneous articles in her well worn shopping bag. At the same time a delicate little woman in a bewildering, iridescent, prismatic sort of a costume, all beads and sparkle and jingle, came flashing and rustling down to the counter, having her white hands sparkling with jewels, ordered a salad, a lobster patty, a cup of bouillon, a cheese cake, and an ice with a cup of chocolate smothered in cream, dipping first into one dish and then into another as daintily as a humming bird darts his bill into a flower cup—spoiled $2 paying for it all, tipped the waiter with a smile as dazzling as her costume, and went flashing and sparkling down the room like a glowworm in a dusky thicket.

"How many people do you accommodate at lunch each day, and how many of them are women?" asked the reporter of the superintendent of the place.

"About 2,000 in all, and 1,185 are women."

"Do you think the average woman selects her lunch in accordance with the rules of health?"

"I don't think there is any 'average woman.' If there is she buys her lunch somewhere else or brings it in her pocket. The economical woman eats the cheapest food in the bill of fare, regardless of quality, and her lunch costs ten or fifteen cents. Sometimes two women come together, give only one order for the two, and then fume because they have to pay the extra ten cents in charge for dishes and service. They seem to get more nourishment and pleasure out of the few cents they save than all they spend. The extravagant woman eats the most expensive dishes she can find, and enjoys a piece of poor strawberry shortcake when it costs seventy-five cents that she couldn't touch at fifteen cents in the season. The woman in a hurry always eats something that she can drink like bouillon, and then buys half a pound of caramels to stay her stomach on the way home."

"Does a women compare her check with the list and raise a rumpus over fancied errors?"

"Oh, not very often, but when she does it takes every man in the place, from the proprietor down to the boy that opens the door, to convince her that she is not a victim of dishonest practices. You see, economical women find out what a thing costs before they order it, and extravagant women do not care what their bill is any way."

"Which had you rather feed, 100 women or 100 men?"

"Oh, 100 women, because there's more money in it, though they are a little harder to get along with and require better service. A man wants a dinner for lunch, and orders a cut of beef, potatoes, onions, succotash and celery, and a bottle of claret or beer, and everything hot must be steaming or he swears, and everything cold must be freezing or he fumes. The food, though commonplace and substantial, is more expensive than the whipped wind, baked froth and frozen vanities we serve to women in fancy forms. They'll eat almost anything if it only looks dainty and pay well for it, too. If they do find fault with the food, as they know how to do very scientifically, they are sure to come fluttering back again like birds to their old haunts in spring time; but if a man is displeased he says very little, but shakes the dust of the place from his feet forever."

"Do women ever leave their parcels and pocketbooks on the tables and come rushing back to find them?"

"Leave things? Leave things? They rarely take anything away with them that they can lose off or lay down. We have a property room full of gloves, handkerchiefs, eyeglasses, opera glasses, pocketbooks, latch keys, jewelry, hairpins, muffs, parasols and umbrellas—everything but their poodles and their children; those usually follow them out. Sometimes one will come up here to the desk and in spite of my cautions lay her purse down while she talks, then suddenly see some one she knows down at the door, and away she will dart with her pretty skip and swing and flourish, and the two will go chattering down the street together. In a little while she will want to buy something from a bargain counter, and then she will discover her loss and come rushing back here to tell me how she left the purse on just such a corner, in just such a place by some particular book, and wonder and wonder why it isn't there then. The strangest of all is to see them come in here asking for things they have evidently left somewhere else, and never thinking of the ones they have scattered here until I produce them.—New York Sun.

THISTLEDOWNS.

They tremble gently o'er us,
And waver with the breeze
To flutter fair before us—
But if we think to seize

Those bits of lightness, floating
Elusive, fairy wise,
Beneath our fingers darting
They quiver toward the skies.

They sail along serenely,
And then, like tricksy elves,
Dart swift aside, and meanly
Evade our longing selves.

And if perchance we win them
The touch must subtle be
Which holds the grace within them,
Yet lets them poise as free.

Such are those rare creations
With fleeting beauty fraught,
Our airy inspirations,
The thistledowns of thought.

—Housewife.

Fads of the Footlights.

The fads of actresses and actors form a curious study. Nearly every person on the stage any length of time betrays a leaning to some particular thing outside of her or his profession, a conspicuous weakness. The lovely Sadie Martinot, whose imported dresses excite the woman world, has a weakness for her pretty self. She uses paper with an etching of herself in one corner. Georgie Cayvan has a collection of thirty scrapbooks. Emma Carson and Marie Jansen like cats. Rose Coghlan spends a great deal of time on a couple of big dogs given her by Lester Wallack. Herbert Kelcey, who divides time with Bob Hilliard as a stage beauty, never wears an overcoat.

Lillie Alliston has rare bric-a-brac picked up in the Orient. Minnie Palmer goes in for etchings. Stuart Robson is said to love old books. Francis Wilson is crazy on the subject of Napoleon. He has a big bronze bust of the emperor, given him by some Columbia college students whom he coached in amateur theatricals. Wilton Lackaye has a unique collection of fencing foils. Langtry has many fine photographs with autographs. Mollie Thompson is proud of her four banjos. Harry Edwardes goes in for bugs. He is an authority on entomology. Milnes Levick is in love with pipes.—Cor. Pittsburg Dispatch.

The Bowie Knife.

Much has been said and written regarding the origin of the bowie knife. The fact is that Rezin P. Bowie, not James, conceived the idea of the knife. The invention was the result of an accident. Col. Rezin P. Bowie was a planter in Opelousas, La. While hunting wild cattle he attacked a young steer, which in throwing up its head struck his hunting knife in such a way as to knock it through his hand, making an ugly cut between the thumb and the forefinger. On returning from the hunt he repaired to the blacksmith shop on his plantation, determined to have a knife which would be a protection against such accidents.

Picking up an old file he ordered the blacksmith to make a knife of it having a cross piece betwixt hilt and blade, so that it would be impossible to be entirely driven through a man's hand. In this way did the bowie knife originate, and it was never intended for other than a hunting knife; but James Bowie improved the original weapon, and brought his own knife so prominently into notice by the use he made of it in personal encounters that the improved weapon became known as the bowie knife.—New York Ledger.

The Oldest Vessel Afloat.

The oldest sailing vessel afloat!

What must she look like and what is her history? She is 110 years old, built in Baltimore in 1780. Her name is the Vigilant. She has since then been a coaster, a peaceful common carrier of merchandise, a slaver and a pirate, and now today she does good service as mail carrier between St. Thomas and Santa Cruz, in the West India Islands. Her owner, Mr. S. Penthany, of Santa Cruz, was in Bangor and displayed a picture of the old craft which was taken as the vessel was rounding a coral reef under full sail. The picture is a good one and the lines of the craft are well brought out.

"How much of the original craft is there now?" asked the reporter.

"The keelson and main tributors of the hull which are laid in the construction of her are still there," said Mr. Penthany, "and they are good for many years to come."

What a story would the history of this old craft make!—Bangor News.

An Illuminated Fountain.

The apparatus employed in the electric fountain in Lincoln park, Chicago, is quite simple. A number of arc lamps with horizontal carbons and each provided with a parabolic reflector are located in a vault or cavern beneath the fountain pool. Openings covered by plate glass and inclosed by brick spouts, permit of the upward projection of the light into the streams of water and spray. By means of colored glass slides interposed between the lamp and the lower openings in the spouts a great variety of beautiful combination effects are secured.—Western Electrician.

Quinine is robbed of its bitter taste by combining it with sugar of milk and some bicarbonate of soda. Capsicum, ginger or other aromatics are also used in combination with quinine to prevent its disagreeable head symptoms and for other valuable improvement in its administration.

The badger is by no means unworthy of being taken as an emblem. He is a very plucky, persistent little animal—not so industrious as the beaver, perhaps, but capable of a great deal of endurance, and sufficiently brave in his own defense, though ordinarily quiet and inoffensive.

The Philadelphia City Directory shows that more than 12,000 persons by the name of Smith reside within her limits. Of this number there are 250 full grown Johns and 320 Williams.

"Better late than never" was used over 300 years ago by Thomas Tucker, in his "Five Hundred Points of Good Husbandry." Later on Bunyan used it in his "Pilgrim's Progress."

THE KINGS' DAUGHTERS.

Growth of a Beautiful Order of Sisters.

MEMBERS OF ALL CLASSES IN LIFE.

Varied and Extensive Work Performed by Them.

A richly dressed lady leading a shabby little waif of a girl boarded a train at Hartford one morning last summer and led her little charge through the long train, looking inquiringly into the faces of the passengers. Evidently she was seeking some kindly person to whose care she might consign the child, which she was sending into the country for a season. Seeing no face which inspired her with confidence to ask so great a favor, she retraced her steps to put her charge in care of the conductor, when a passenger beside her, a lady, removed her wrap and revealed over her heart a tiny silver Maltese cross tied with a purple ribbon. Instantly the lady approached her, touched the silver cross, whispered the mysterious words, "In his name," and told her all her need. "In his name," answered the traveler softly, and tenderly lifted the child on her lap, and cared for and amused her through the journey as lovingly as though she were her own.

A lady, whose elegance of attire and beauty of person attracted the attention and awakened the admiration of all who saw her, stepped out of one of the large and fashionable stores of New York to her carriage, which stood waiting at the door. The wild March wind caught her fluttering silken draperies, and rudely tore her cloak from about her. As she struggled against it a little silver cross fell from her dress and went tinkling down on the pavement. A mite of a girl with a scrap of shawl over her head darted out of the shelter of the doorway, picked up the silver trinket and drew its counterpart from her own shabby little frock. "It is the badge of the King's Daughters," said the lady, softly; "are you one, too?" She held out both her hands with a smile so gentle and tender that it was more precious to the shivering little girl than the money the lady left in her half frozen hand "In his name."

Who are these royal daughters of the king? What is their mission? What is the signification of the silver symbol they wear and the potency of the mystic motto, "In his name?"

In January, 1886, a circle of ten ladies met to discuss and arrange some plan which should unite all Christian women in one grand sisterhood of service. Adopting the system of Edward E. Hale's Ten Times One clubs they constituted themselves a Central Ten, around which should crystallize other Tens of workers, not assuming any authority or responsibility over them, but simply to form a nucleus around which they might cluster, and from which might radiate encouragement, advice and guidance. Of the various names proposed for the order that of the King's Daughters was most favorably received and finally adopted; the badge of the society was selected in the small silver cross tied with the royal color; the watchword chosen was the simple "In his name" of the apostles of old, and the mottoes of action selected were:

"Look forward and not back."

"Look out and not in."

"Look up and not down."

"Lend a hand."

The society as organized had no constitution and no code of laws save the one general regulation that whenever any reasonable request should be made "In his name" it should be granted without question or delay.

Never was less said or written, and never so few plans made for any work, as the design of the society was to move silently and steadily, and to secretly accomplish its purpose of bridging the chasm between the rich and the poor, and to unite all women engaged in any kind of good work in such a way as to secure to each the sympathy and co-operation of all. Yet from almost every state in the Union, and from most remote countries over the sea—India, Australia and New Zealand—from people in every walk in life, from pastors of churches, matrons of hospitals, teachers of schools, leaders of philanthropic societies, presidents of colleges, from the belles of Fifth avenue and the street gamin of the Bowery come tidings of the continual organization of tens upon tens of King's Daughters, until 8,600 silver crosses have been sold and 10,000 members have enrolled their names among the King's Daughters, although the society has been organized only two years.

As for the kind of work accomplished by this remarkable sisterhood, it is too varied and extensive to be recorded in detail. There are Tens that visit the sick, Tens that supply the hospitals and homes with flowers, Tens that support foreign missionaries, Tens that sing and Tens that sew, Tens that endow beds in hospitals, Tens that provide pleasant country homes for deserving poor, and Tens that simply "bridle their tongue" and "endeavor to live in love and charity with all men" all "In his name."

The cash girls above referred to are known as "the little doorkeepers," whose unique motto is "Lord, keep thou the door of my mouth;" and there are Heartsease Tens of little children who cultivate pansies for the hospitals. There are the Quiet Tens in schools, and the Courteous Tens, who claim that "King's Daughters should ever display the manners of the court;" the Old Maids' Tens of helpful unappropriated blessings, and the Old Lady's Ten, whose youngest member is more than 80 years old, and whose oldest member donned the silver cross on her 100th birthday; the Faithful Tens in guilds, the Look-up Tens in deaf mutes' homes; and even in the Home for Incurables the patients waiting for death have organized themselves into a Considerate Ten, who shall endeavor to make their nurses' labors as light as possible. One of the young ladies' Tens in Boston sent loads of sand to the tenement yards in the city for poor children to play in, and the graduating class of a fashionable boarding school calling themselves the Continuing Ten have adopted a little girl, and intend to provide for her and give her all the advantages of culture and education which they have received. Musical Tens of the most cultured and gifted ladies in the city devote their talents to the entertainment of the poor, and also, through their use in charitable concerts, accumulate funds for the support of various missions, thus bringing into use the talent of the wealthy for the benefit of the poor.—New York Sun.

There are seventy-one "champions of England" in games and sports of all sorts.

AT A MILITARY SCHOOL.

The Leavenworth Pupils in Review—Infantry, Cavalry and Artillery.

One after another they move out upon the field, facing west, the infantry on the right and nearest us; then the battery, in two lines, its gun carriages to the front; then the long single rank of the cavalry battalion, stretching to the far southern edge of the field. Well out to the west, in front of the center, is the commanding officer with his staff, and presently, as the white plumed adjutant gallops down the line, turns toward his chief on reaching the center, then halts and reins about, there is a simultaneous crash as arms are presented, and a long line of steel—the sabers of the cavalry—springs into air. Then review order is taken, ranks are opened, the battery unlimbers and whirls its black muzzled guns to the front; another present of the line to the exalted personage who receives the review, and is hailed with a flourish of trumpets and the simultaneous droop of all the standards; another movement, and the line becomes an open column: another command, and with a triumphant burst of music from the band the whole array moves as one man; the passage in review has begun.

In quick time, the band leading, they come jauntily toward us, changing direction at the upper corner and swinging past the animated groups of spectators. Front after front the sturdy infantry trudges by, the student officers hidden as file closers behind their companies and wishing for this occasion only that they belonged to the cavalry and could command and be in front or their men instead of trailing meekly after them, as required of the infantry "sub." Well they know that they cannot by any human possibility look half so picturesque in this position as their rivals and contemporaries of the cavalry on their "prancing chargers" and in front of their platoons. All the same, they have their sympathetic admirers in the throng, and so they pass us by. And then with champing bits and tossing manes come the platoons of horse. The battery quickens its gait on the marching flanks, and the girls wonder how those gunners sit so straight with folded arms and never make hysterical grabs at the bars or at each other, as they would do under like circumstances. The cavalry, too, comes around at a trot, the young platoon commanders fully alive to and making the most of their golden opportunity, looking vastly martial and striving not to look as though they very well knew just where "she" happened to stand among the groups of fair ones under the shade trees.

Down the long field goes the glistening column, officer after officer saluting as he passes the reviewing point, and then the infantry reappears, tramping up the eastern edge. Like some perfected machine, the long array wheels into line to the left, the ranks are dressed, then brought once more to review order. Again the trumpets flourish, the standards droop, and arms clash to the present. Then comes brief rest before some one of the three commands is summoned to the front to show what it can do in the maneuvers of its particular arm. It may be a stirring skirmish drill, covering the entire valley, by the bright plumed cavalry. It may be a dashing series of battery maneuvers, with much smoke, noise, and odor unlimited of "the villainous saltpetre." It may be rapid evolutions of the foot battalion; but in each and all the student officer must take his part.—Charles King, U. S. A., in Harper's Magazine.

Making Bonnets at Home.

"Forty dollars for a spring bonnet?" a lady was overheard to remark to a friend as she was riding down Fifth avenue in a stage yesterday morning. "Not I. Nor $20 either. Money is worth too much for that. I haven't spent over $10 and not often more than $6 for a bonnet since I was married. This I have on cost me just $4.27.

"And I thought it was French. How can you look imported when you are really homemade?"

"Oh, but I'm not homemade. I'm just as French as if I came from Paris in my little cousin's big trunk. That's the beauty of the thing. My bonnet was made to order by a bona fide French milliner and one of the cleverest in the city, too. Yes, of course, there is a little scheme. There were a dozen of us who passed a unanimous resolution that bonnets for us, individually and collectively, had got to come down. We shook hands upon it and exchanged pledges of bonnet pins. While we were discussing ways and means we heard that one of Mme. ——'s assistants was out of a place. Our course was clear; Mlle. Julie should work for us. We inquired, every one of us, among our acquaintances and found plenty of women who jumped at the chance of having their hats and bonnets provided for by a milliner who would come to the house. She comes, that's all. She works by the day or the half day, or even by the hour. She charges $5 a day. She has more work than she can attend to, and talks of hunting up a partner. She makes more money than she did as one of Mme. ——'s designers. And as for us, we're going to the country this summer on our savings. We are paying for material and good wages for skilled labor; nothing more. And really it is a new way of self support for women, you see."—New York Mail and Express.

The Voice of an Actor.

The stage is not a drawing room. You cannot address 1,500 people in a theatre as you would address a few companions at the fireside. If the tone is not raised, you will not be heard; and if you do not articulate, the public will be unable to follow you.

So-and-so, I am well aware, has won for himself the reputation of a natural actor by affecting the conversational tone. He scarcely pronounces one word louder than another; he lets the ends of his phrases sink; hesitates, abridges, pretends to be at a loss for words, repeats his words two or three times over, drawls along for ten minutes, and then hurries his delivery in order to arrive at the effect. And as the public is like Panurge's sheep, even when it happens not to understand, it exclaims: "Dear me! how very natural! He seems a if he were talking with his feet on his fender by his own fireside. What an actor! I did not hear what he said—did you?—but how very naturally he said it!"—C. Coquelin in Harper's Magazine.

Four Sundays in a Week.

Friday is the Arab's Sunday, but it does not put much stop to his worldly business unless he so chooses. Then Saturday is the Jews' Sabbath, and then comes our Sunday, on which day the French workman continues to work, in order to take at least a half holiday on Monday. There are four days out of the seven when the visitor to Algiers runs the risk of finding a shop closed or a workman not at his post.—F. A. Bridgman in Harper's.

THE YOUNG TERROR.

M. Quad's Advice to the Dime Novel Reader.

THE METHOD OF TACKLING A GRIZZLY.

The Proper Outfit for a Would-be Slayer of Indians.

Come, my son, it is time you were getting ready for a campaign against the Indians and grizzlies. You have been reading "Daring Dan," "Ike, the Indian Slayer," "Gus, the Grizzly Killer," and other exciting and truthful stories intended to make a boy dissatisfied with humdrum life, and your mind is made up to go west.

You must have an outfit. One reason why so many boy hunters make a failure is because they economize too much in the outfit. Don't be stingy in buying guns. It will be all the better if you have a Spencer carbine and a double barreled shotgun to go with your Winchester. Suppose you came suddenly upon a band of eighteen Apache warriors. You could only kill sixteen of them with your Winchester, and two would be left to ride off and alarm the tribe. By having some extra guns along you are sure of the whole crowd, and the tribe won't get on to you.

And don't scrimp on bowie knives. It would be an almost fatal mistake to start out with only two. Buy four, at least. They are for use at close quarters with grizzlies. Of course one bowie is enough to kill one bear with, but you may be attacked by four bears at once, and four knives would then be in demand. If you don't get but three bowies make up the deficiency with a Spanish stiletto or a Moorish dagger. It will come handy, not only in a close fight, but to pick your teeth with at the camp fire.

AND REGULAR MOCCASINS.

As for dress, get the fringed buckskin, a coonskin cap and regular moccasins. Such things as shirts, collars, cuffs or handkerchiefs would be only waste luggage. If you should appear in Miles City with a collar on it would give you away at once. Nobody would suspect that you were the young terror from the east who was aching for a chance to tie a knot in a grizzly bear's tail.

You should take at least 200 pounds of ammunition. You may be corraled somewhere in the Rocky mountains by 400 fierce and determined Indians, and you don't want to lose your scalp for the want of a few extra cartridges. All the provisions needed is a sack of jerked buffalo meat. It doesn't make the least bit of difference whether the buffalo was jerked off his feet, over a precipice, or head over heels. If the meat is a little fly blown it will add to your dignity as a hunter. You can chew plug tobacco or not, just as you feel about it, but it would be wisest to do so. All the champion terrors chew large quantities, and the juice comes handy to spit into a rattlesnake's eyes.

I wouldn't take a horse if I were you. He would be a great deal of trouble to take care of, and most of your hunting will be in a rough country. The true terror has always gone afoot and always will. Anybody on horseback can make up faces at a grizzly and gallop off out of reach.

One great mistake which the average boy makes is planning to accomplish too much the first season. Most of them figure on wiping out about 1,000 Indians and twice that number of bears. Keep your estimates down to a reasonable figure. You feel ambitious and enthusiastic, of course, but there is a limit to what a boy can do. Set your figures at about 400 Indians and 300 grizzlies. This will be almost two per day the year around, and will keep you from spoiling.

SCALP EVERY ONE.

I should scalp every Indian I shot. It not only looks more business like to do so, but that's what you've got a scalping knife for, and if you can get about 200 scalp locks you can make the nicest door mat you ever saw. It doesn't hurt a dead Indian a bit to scalp him, and if you don't take it, it will go to waste. It would be well to have a six mule team follow you at the distance of a mile or so to pick up and care for the rifles, knives, bows and arrows and war clubs of the slain Indians. These can be run east by car lots and sold at auction, and the profits will buy all your ammunition. Don't exterminate any particular tribe of red men, but kill off about one-fourth of seven or eight different tribes. This will extend your reputation as a terror.

As to the best way of killing an Indian, I shall not pretend to advise. Some boys prefer to shoot him, and others believe in sticking him with a knife. If you can catch him in a deep gorge you might drop a big bowlder down on his head. Another way is to catch him by the foot with a lasso, and drag him over the earth until his spinal column is worn down to a toothpick. In any event the fun will be all on your side.

It's a little different with the grizzly bear. He won't be quite so terror stricken over your sudden appearance, being built on a different plan. You expect some show of resistance, however, that you may have opportunity to show your pluck. Some of these pale faced, weak kneed boys hold a grizzly off at long range and fill him up with bullets, but you will never see their wood cuts in a dime novel. The true Terror will wind his Mexican serape around his left arm, hold it out for the bear to chew on, and, while the bear is busy getting a meal, put the bowie knife into him to the heart. You will be a trifle nervous with your first bear, but after that it will be as easy as climbing a fence. The claws should be separated from the skin and sold in a different lot. The latest quotation on bears' claws is $16 per bushel, and if you can't average more than two bushels per day you will still make a good thing of it.—M. Quad in Detroit Free Press.

I wonder what saccharine or succulent qualities inhere in wooden toothpicks that so many persons cling so persistently to those unlovely little instruments long after they have performed the service for which they were designed. On any elevated railway train one is sure to see one or two men with toothpicks protruding from their lips, as if to advertise to the world a recent breakfast. Not all of those who make this exhibition are ill dressed or boorish, and one is left to conjecture in vain why a particularly private portion of the toilet is thus thrust upon public attention.—New York Star.

It Is Hard.

"Why don't you shave yourself and save time and money?"

"Because I can't bear to cut an old acquaintance."—Life.

STORIES OF THE STAGE.

One of the Late Lester Wallack's Interesting "Memories."

After Garrick had brought in a great deal of wise reform in the way of dress there was a lull again, and no one dared to do anything new. Many generations later my father was cast for the part of Tressel in Cibber's version of "Richard III." Tressel is the youthful messenger who conveys to King Henry VI the news of the murder of his son after the battle of Tewksbury.

My father, a young, ambitious actor, came on with the feather hanging from his cap, all wet, his hair disheveled, one boot torn nearly off, one spur broken, the other gone entirely, his gauntlet stained with blood and his sword snapped in twain, at which old Wewitzer, who was the manager, and had been a manager before my father was born, was perfectly shocked. It was too late to do anything then, but the next morning Wewitzer sent for him to come to his office, and addressed him thus: "Young man, how do you ever hope to get on in your profession by deliberately breaking all precedent? What will become of the profession if mere boys are allowed to take these liberties? Why, sir, you should have entered in a suit of decent black, with silk stockings on and with a white handkerchief in your hand." "What! after defeat and flight from battle?" interrupted my father. "That had nothing at all to do with it," was the reply. "The proprieties, sir, the proprieties!"—Scribner's Magazine.

A Harmless Comedy of Errors.

Morris E. Ward, formerly of the press of this city, but now agent of a paper car wheel concern on the Hudson, is charitable, gallant and absent minded.

He has a poor relative up the country to whom he sends all his old clothes. There are many ladies in the city to whom he sends invitations for the theatre.

The other day he wrote to his poor relation: "I send you my last pair of pants but one; they may be a trifle small, but you can let them out in the waistband. If they are too long you can turn 'em up. Don't mind the patch."

The same day he wrote to a lady:

"Since you were kind enough to accept my invitation to the theatre, leaving it to me to select the play and evening, permit me to say the Columbia, this evening."

In an hour Mr. Ward received the following from his lady acquaintance: "As you did not send the pants by the messenger who delivered your note, I am, of course, unable to do anything to them. However, this need not interfere with our engagement for the theatre."

Mr. Ward went to the theatre, but he was very uneasy.—Chicago Mail.

The Parrot and the Owl.

The Question having arisen: "Why Do We Eat?" the Parrot Challenged the Owl to a Discussion and left the Decision to the Serpent. The Parrot went back several Thousand years to Prove that Adam Ate and was Obliged to Eat, and that all Men who came after him had been Obliged to Eat, and used up the best part of two hours in drawing comparisons, Making Deductions and Clinching his Points. When he finally sat down wet with Perspiration, but Flattered by his own Arguments, the Serpent asked the Owl to begin.

"Gentlemen," said the Bird, as he slowly arose, "I have only a word to say. It is my opinion that we Eat because we were built that way."

The Serpent promptly Decided that the Owl had the best of it, and when the Parrot raised a howl over it the Fox chucked him under the wing and said;

"Blab is a good thing, but Brevity and Common Sense most always hit a Jury."

MORAL:

If some Lawyers were Dumb they would double their Patronage.

Materially Different.

Dudley—How much do you weigh, Marion?

Hawbert—Ninety-fouah paounds."

Dudley—"No; I mean net weight-r, without yure cane, deah."—Judge.

Sam's Poetical Effort.

Sam's teacher, upon dismissing school Friday afternoon, requested each one of her pupils to bring Monday morning one or more verses of original poetry as a composition. Now, Sam could easily have cut up a cord of wood or ridden an unbroken colt, but to compose poetry was beyond him. He tried unsuccessfully all day Saturday and Sunday. Late Sunday afternoon, worn and miserable, he strolled down to the river side, seeking inspiration. There he saw a half sunken flatboat. The divine afflatus came and Monday morning he appeared at school and triumphantly presented his teacher the following couplet:

A boat went down into the water;
It went down deeper than it oughter.

—Exchange.

Hard Luck.

"O I had such a lovely dream!" said Minnie to her little brother one morning as they were going down stairs to breakfast. "Did you? What did you dream about?" asked Bob, stopping on the landing and eyeing his sister suspiciously. He was an only son among five daughters, and never had dreams. "Well, I dreamed that I was in a candy store, and that I was eating caramels and taffy." "And I—what was I eating?" cried Bob, getting red in the face at the thought of it. "You?" "Yes, I." "Why, you weren't there at all." "I wasn't there at all, and you went and dreamed that you were there doing that without me!" and he burst into tears and went down yelling to his father."—Boston True Flag.

An Observant Youngster.

On a summer's morning our little Lillie was walking with her aunt, and discovered a spider's web. She was delighted and exclaimed: "Oh, see! here is a hammock for bugs."—Christian Advocate.

His Antiquity Established.

Census Taker—How old is your father?

"Just passed his hundredth birthday."

"Impossible!"

"Quite true."

"Can you prove it?"

"Yes. He sent some poetry to the magazines and lived to see it published."

"And he's only 100 years old? Well, well!"—Lincoln Journal.

WHO CAN EXPLAIN IT?

A Strange Disease on the Island of St. Kilda.

A PARALLEL CASE IN TONGA AND SAMOA.

"Strangers' Cold" Caused by the Arrival of a Vessel.

Few portions of the habitable earth have received more attention during the past three centuries than the little island of St. Kilda, which lies off the coast of Scotland. No people are so strongly attached to their home as the inhabitants of this lonely place. Benevolent persons in Great Britain have repeatedly offered to move them all to Australia or Canada, and to provide for their wants till they could get established. They have, however, always declined these propositions. The climate of the island is so severe that it is scarcely endurable, the sea about it is so tempestuous at most times that vessels cannot approach it, while the soil is so sterile that it will produce little but grass, potatoes and barley.

The people suffer from cold, hunger and isolation. It is also affirmed that they suffer from the visits of strangers, even those who come on errands of mercy. All writers on St. Kilda affirm that the arrival of a vessel is immediately followed by a peculiar sort of influenza which affects all the people. Rev. Aulay Macaulay, great grandfather of the distinguished historian, wrote a work on St. Kilda, in which he speaks at length of this strange disease. Martin, who wrote an account of the island and its inhabitants nearly two hundred years ago, also refers to it. In giving evidence before the crofter commission, the minister of the island, who is represented as a gentleman of great learning, enumerated the "Strangers' Cold" as among the principal afflictions of the people, and one for which there was no relief.

Dr. Samuel Johnson, who was much interested in the Highlands of Scotland and the neighboring islands, endeavored to dispose of the "Strangers' Cold" by means of an argument. In an essay he wrote: "How can there be a physical effect without a physical cause? The arrival of a shipful of strangers would kill them, for if one stranger gives them one cold, two strangers must give them two colds, and so on in proportion." The logic was excellent, but it did not prevent the poor people of St. Kilda from suffering from a severe cold for eight or ten days after the arrival of every vessel. A writer in a recent number of Chambers' Journal declared that the disease actually exists, and that it is folly to attempt to deny the fact. He states that there is a mass of evidence to establish the occurrence of such a disease after the arrival of every vessel that cannot be disposed of, especially when there is no contradictory testimony.

The same paper states that a parallel to the St. Kilda case is found in Tonga and Samoa. Some affirm that influenza was unknown throughout Polynesia till white men came. It is also stated, in regard to a small island on the west coast of Africa, that "it is a singular fact that any vessel touching there from St. Helena invariably brings with it a disease resembling influenza." The same story is told about an island that lies east of New Zealand. Here all the people begin to cough almost as soon as a vessel lands. The blind cough, and so do infants, though they have no knowledge of the arrival of strangers. This influenza is not like measles and smallpox, that one attack secures immunity, as it recurs when another vessel lands.

The publication of these statements, supported by many authorities, in a leading magazine has called out many expressions of opinion. All admit that it was impossible for the inhabitants of an island near the South Pole to obtain information from those living on St. Kilda. Some believe that the natives of several islands have killed the crews of vessels because they contracted the influenza from strangers who had previously landed. Few have attempted to solve the mystery. It has lately been the fashion to deny any phenomena that could not be explained by natural causes. The old argument of Dr. Johnson has been employed by many persons to disprove the existence of many things. Still thousands are ready to give evidence of their constant occurrence. People who believe in things that they cannot account for are classed as superstitious, and few are willing to be thus designated.—Chicago Times.

Life in the Bahamas.

Dwellers in the dark and somber north can hardly realize the charm and joyousness that seem to radiate from earth and air in the lotus eating southern climes. The mere sense of existence becomes in itself a happiness; one can understand what animals probably feel in pleasant pastures on brilliant days. Then, as the sun sinks slowly downward, the golden heaven glows over a rejoicing earth, flushing every moment into richer beauty beneath the departing rays, while rosy beams of light streaming upward like so many auroras is a singular and very beautiful effect often to be seen in a Bahama sunset.

When the sun has set new beauties appear, every bush and tussock becoming alive with thousands of fire flies; and when a silvery green moon rises in the calm deep sapphire sky, it is difficult to decide whether night or day be the more full of loveliness. Besides the fire flies, a fire beetle—one of the Elytra—is a singular insect, with a brilliant green phosphorescent light proceeding from two round spots on the thorax, added to which, when excited, the insect has the power to emit a regular blaze of light from the segments of the abdomen, of such brilliancy that one can read by its light. In Cuba ladies fasten these elytra as ornaments in their hair, or let them flash beneath the folds of tulle dresses.—Mrs. Blake in Nineteenth Century.

The Orchestra's Six Trombones.

A Russian orchestra was once rehearsing under the direction of Arban, a celebrated French musician. Among the instruments were six trombones, which were playing in unison. Arban noticed that something seemed to be wrong with the trombone part, and made the six trombones play it over again. Then he observed that, where the trombones should have played "do," every man of them played "sol."

"Here, here," exclaimed Arban, stopping them, "that note should be "do!"

"We know it, sir," said the head man of the trombones; "but we don't play "do" at rehearsals."

"And why not, please?"

"Because, in order to play "do," we have to thrust our arms out as far as we can reach. And as it is so very cold, every time we do that it gives us such a chill!"—Youth's Companion.

Digging A Republican Grave.

The following is taken from the last issue of the "Record Union" and speaks for itself. The paper is recognized as one of the leading Republican journals of the State.

"The ballot reform bill on Tuesday in the State Senate met with an obstruction that surprises and discourages its friends—its consideration was put over for two days. Every Senator voting against taking up the bill is a Republican, every Senator voting to consider it is a Democrat. Yet it is a measure upon which party lines should not be drawn, nor can they be legitimately invoked, for there is no party politics in it. It is purely a question of statesmanship and of the furtherance and betterment of the processes through which self government is accomplished.

"The Democratic party at its last State Convention pledged itself for the reform without any reservation; that it indicated the Massachusetts model as most desirable for adoption, was only directory; what it was mandatory upon was the injunction to pass some ballot reform law. The Republican party in its State Convention dodged the question, yet by generalization expressed itself as favorable to all measures to secure fair elections and honest counts. Had it done less than that it would have been untrue to its traditions. Its candidates upon the stump in the succeeding campaign frankly announced their belief in the necessity for reformation of the election laws, and whenever confronted with the question point blank, pledged themselves to favor a law substantially based upon the Australian system as modified in the United States.

"Now come the two great parties into the Legislature, and we find a Democratic minority championing a ballot reform bill that is conceded by those best informed upon the subject to be the best ever drawn, to embrace all the virtues of other election laws and to avoid the errors of other reform systems. We find the Republican majority at the very heel of the session, when a day's delay imperils any bill, voting to postpone consideration and threatening amendments that may necessitate recommittal, which means defeat of a measure.

"If the Republican party becomes responsible for the rejection of the Senate committee bill, either by direct vote or consent to fatal delay, it may prepare to dig its political grave in this State in the near future. No party can expect to bow to the will of the bosses in this matter and command the support of the people. For the bosses alone oppose the ballot reform bill. No man can stand in his place in either Senate or Assembly and advance a solitary reason for rejecting the bill that has not a score of times in this and other States, been shown to be weak, fallacious and without footing. No measure, however benificent, however humane, however American, can be proposed to which the carping cannot oppose objections. Nothing is easier than to find fault, to suggest doubts and interpose fears. It is very easy, indeed to point the way, but more difficult to walk in it. But these are axioms that the bosses and their servitors care nothing about. Their aim is to secure defeat of ballot reform, because its adoption closes up the lucrative business of the vote hucksters.

"The man who is sincere in his opposition to the bill will advance substantial reasons for his faith; when these are shown to be erroneous and mistaken he will yield and testify to independence and manliness by confessing his mistake. But the mere doubter, the legislator who contents himself with the suggestion that the measure is not in his opinion an improvement upon the present law, and who proposes no method for correcting the confessed evils in the existing law, or to defeat the rascalities practiced under it, lays himself open to the suspicion of being boss-ridden.

"Friends of the reform will respect honest objection to it, which is coupled with the suggestion of better means to protect the integrity of the ballot-box than the Senate Committee bill proposes. But those who simply object, and who offer nothing better in substitution, must expect to be marshalled by public opinion among the enemies of public interests. If Republican Senators and Assemblymen permit at this session of the Legislature the defeat of the ballot reform principle, they will convert themselves into sextons and may proceed forthwith to bury of the Republican majority in California."

An event occurred in Reno last week that deserves attention ontside of Nevada, but more particularly in this portion of California. A meeting of bankers, merchants property owners and others was held to discuss matters of grave importance. The Legislature is now in session at Carson, and that body proposes to enact laws, which, it is alleged, would be grossly unjust to the people, by exempting railroad property from its fair share of taxation. This would impose heavier taxes on all other kinds of property, the people being already burdened by all the taxation they can bear. Now, instead of looking to the men whom they have sent to the Legislature to protect their interests, knowing this would be useless, those leading citizens of Reno telegraphed to C. P. Huntington at New York and to the Directors of the Southern Pacific Railroad at San Francisco, in the words of the telegram, "the protection which your Company has power to give is respectfully asked in the matter." This is amazing. It is as if the Capital City of one of the United States was in possession of an army of brigands and the unhappy citizens begging for mercy from the leaders. Save murder, rape and pillage of private dwellings, the people of Nevada appear to have but very little more protection in the enjoyment of their property than had the people of Europe when Attila, "The Scourge of God", led his hosts among them, and left nothing behind except what could not be destroyed or carried away. What Kaba Rega, the robber king, and Manyuema are to Central Africa so appear to be the Legislature of Nevada to the people they misrepresent. How grinding must be the oppression, how keen the suffering of these leading men of Nevada, when they were forced to utter a cry for mercy that rings from the Atlantic to the Pacific. Every man who signed those telegrams has the welfare of his State deep at heart. Each of them knew well that the publication of the telegrams would banish capital and intending settlers as completely as would the approach of a hostile army to an unprotected city. Yet the imminent danger of immediate robbery forced them to risk the more remote evil. When such a condition of things exists in a sovereign State of the Union, we have very little to boast of as compared with the chronic misrule and revolution that prevails in South America.

At last comes news of the death of George Hearst. This sad intelligence will both shock and pain his own fellow partisans and the mass of the Republican party. The deceased Senator suffered the pangs of a matyr with heroic fortitude, and the normal friendliness of the people was intensified by his resignation under suffering. The dead senator was a noble man and the representative of a peculiar and memorable class, the early Argonauts of California, having come to this State in 1850, and just escaped being a pioneer. He was a representative American and was emphatically what is called in this country a self made man. He was indomitable and courageous. He was as true to his friends as the needle to the pole. He was one of the few men of enormous wealth who did not allow himself to be made sordid or unfeeling by its possession. He was to the last the same honest, sincere, straightforward and hardy miner. He had always a warm grasp for the hand of a friend, and no worthy object was ever turned from his door. His manners were always simple and unaffected. He was a typical Democrat, and illustrated his belief in Democratic principles in his personal habits, manners and speech. He was in no sense an orator, but he had a quiet fund of humor and good sense that made him the valued friend of such men as Senators Edmunds, Beck, Blackburn and others of the brightest lights of the upper house of congress

In any discussion of the condition of affairs in Inyo County the issue must not be obscured by talk about the great natural resources of the country, the land, water, and climate. These are all here yet, unimpaired, but also very little improved. The Garden of Eden was abundantly blessed in the matter of fine soil, plenty of water, and no one will deny that its climate may have been even better than that of Owens Valley. But when the cherubim with the two-edged flaming sword was placed at the entrance, there was scant opportunity for settlers to enter. So with us, the gate of our valley is so barred by a two-edged sword of expense, cutting so deep both ways, coming in and going out, that settlers have not the courage to attempt an entrance.

In England they are beginning to find that the amount of gold they can command from the world,s stock of that metal is inadequate to the demands of her people.

It is very significant that every railroad interest in the State opposed the wiping out of the useless and very expensive Board of Railroad Commissioners. The Board started with two of the members in the service of the corporations and the third a demagogue. "Can the Ethiopian change his skin, or the leopard, his spots? Then may ye also do good that are accustomed to do evil."

The Democratic majority in the next Congress is already so large that the election of another Democrat passes unnoticed. It emphasizes one thing, however, as showing the drift of political sentiment. Rhode Island has now a Democratic State Government, a Democratic Legislature and a solid Democratic delegation in the lower House of Congress.

FOR ISOBEL.

Not long since, it was while yet the public excitement ran high in connection with discoveries made when the old Bauderet house, on Bourbon street, New Orleans, was torn down, I was told the story of Augustin Verot.

It was in the year 1839 that this young man, rich, gifted and handsome, came to New Orleans to spend a winter with Charles Marot Bauderet, whose acquaintance he had formed in Paris. The two men were of the same age, and their tastes were similar. Verot had been captivated by Bauderet's wit, learning and subtile personal charm. In turn, Bauderet's imagination was touched into singular activity and his sympathies borne away by Verot's magnetic genius.

It is rare indeed that two young men, poets both, find such an overmastering mutual interest flowing between them. Their friendship became at once a passion.

When Bauderet left Paris after a year's sojourn there he exacted a promise from his new friend that he should come to New Orleans and spend some months with him. Thus it came about that early in the autumn of 1839 Verot arrived, after a pleasant voyage, and took up his abode in the Bauderet mansion on Bourbon street.

Charles Marot Bauderet, as some of my readers will remember, was a bachelor orphan, occupying the large, silent old house all alone, save that he was surrounded with many faithful slaves.

The house was a low, far spreading, gloomy brick structure, whose immensely thick walls and small windows gave it a jail like appearance. Vines clambered over it from base to roof, and it was embowered in dusky trees. Surrounding it was a high brick wall topped with a picketing of iron. The gates were massive, and closed with huge spring locks that could be opened only from within. They were attended by statuesque keepers as black as night.

Bauderet was descended from a family of buccaneers. His wealth was the result of ancestral piracy, murder and rapine. In the young man's blood burned the taint of unbridled passion, and in his brain a lawless imagination held high carousal. His poems were, like those of Poe, Baudelaire and Villon, suffused with something that suggested madness, but the young man showed no sign of an unsound mind. On the contrary, he was brilliantly, fascinatingly sane and logical in his conversation. He went little into society and entertained scarcely at all, in the general meaning of the word. A few friends, rarely more than one at a time, were admitted through his protentous looking gates and into his luxurious twilight parlors and dusk dim library. He was a connoisseur of wines, cigars and old books; he smoked almost incessantly, rarely drank to excess, read mediæval poetry and in his conversation was much given to advancing preposterously romantic theories touching almost all the relations of life.

When Verot arrived Bauderet met him at the wharf with every outward show of irrepressible delight; but the young Parisian at once felt that some great change had taken place in his friend. At first he was inclined to fear that Bauderet was not sincere in his expressions of affectionate joy over his arrival; but soon enough the mystery was adequately explained. Bauderet was in love. His whole nature was absorbed in the new passion.

Mlle. Des Champs was the daughter of a retired planter, whose home was but a few steps from Bauderet's gate. Recently the poet had met her. To meet her was to love her, and now he could find room for no other thought. Isobel Des Champs was the subject of his most eloquent conversation, his strangely melodious poetry, his curiously brilliant sketches in water colors.

Verot found Bauderet's house a very palace of enchantment; so vague and yet so effective were the impressions made by its rich tapestry, its massive mahogany furniture, its dim vistas of books and pictures and its solemn silence. The young patrician Frenchman had been accustomed to old houses, but here, in this city of the New World, his creole friend had given him the freedom of one that seemed filled with an antiquity far greater than the Roman buildings of France could boast of—even the most ruined in old Provence.

Bauderet was anxious to have Verot see Isobel Des Champs, and, of course, the young visitor, especially after Bauderet's eloquent description, felt quite willing to meet the beautiful girl. Nor was he in the least disappointed when he saw her; indeed, her loveliness so far surpassed expectation, so dwarfed all former visions of maidenly attractiveness, that Verot was struck to the heart by her first glance.

If Isobel captivated Verot it was not a loss of love at first sight, for the handsome Parisian did not fail to impress her imagination in turn. From the moment of their first meeting they were ardent lovers, as everybody could plainly see, save only Bauderet. So lost in the infatuation of absolute devotion was he that he could see nothing but Isobel's dazzling beauty, could hear nothing but the rich, low music of her creole voice.

Soon enough Verot was in the seventh heaven of a successful courtship—not courtship, but love telling and love listening—while poor Bauderet went right on in blissful enjoyment of his imaginary lordship of Isobel's heart.

The autumn sped; the winter went like a dream, and out flashed the orange blooms, out poured the mocking bird songs, heavily drooped the roses by the walls. The breezes from the gulf were sweet and fragrant; the sky was like a great pale violet tent shutting in the world with a wavering mist dream of spring.

The time was approaching for Verot to depart for France, when one morning he informed Bauderet that he and Isobel were to be married, and would set sail within a fortnight to make Paris their home.

At first Bauderet was stupefied by the announcement. He gazed almost vacantly into his friend's eyes, while his face grew deadly white. Not a feature moved, however, nor did the quiet smile quite go from his firm, thin lips. It was an admirable exhibition of that self control which in those days was so much cultivated by gentlemen who were in the habit of settling all matters of personal disagreement at the point of sword or muzzle of pistol.

Of course Verot had counted the cost, and fully expected a duel, but he was pleasantly surprised to find that Bauderet would not demand a meeting. Furthermore, instead of appealing to the code the host who had been so cruelly robbed took the turn of affairs with a philosophic resignation truly admirable. After the first great struggle against the terrible disappointment which the disaster to his hopes had brought he drew close to his friend and wished him great joy.

Verot was both touched and awed by the strange change that came over Bauderet's face and manner. It was a slow, mysterious transformation of the man. His face took on an inscrutable mask of quiet, almost serene, resignation, behind which something suggested immeasurable depths of poignant suffering. In his eyes at times burned a light which startled Verot and haunted his dreams at night.

Love predominates everything, however, and the passionate young Parisian was so bewildered and blinded in the rose mist of happiness that the deepest significance of Bauderet's conduct was entirely lost to him. He was aware of nothing much besides his impending nuptials, the tender glory of the semi-tropical spring time and the wild flutings of the lusty mocking birds.

About this time, as is now known, Bauderet went frequently to see an old negress, a voudoo charm weaver, and procured from her a phial of hideous poison—a black liquid, thick, rank, frenzy bearing—made from the heads of snakes, the tails of scorpions and the roots of various deadly weeds all steeped together for many days. Among the African voudoo workers this liquid was known by an appellation which meant "brain burner." It was said to induce madness of the most hopeless kind. Its concoction was attended with the most solemnly horrible of rites and incantations.

It was the night before Isobel and Verot's wedding day. Bauderet appeared to be in better spirits than usual; he had some rare old wine brought into the library, and he and Verot sat up till late drinking and smoking, while they permitted themselves perfect freedom in conversation.

Although, as I have said, their tastes were similar, no two men could have been less alike in personal appearance than were Verot and Bauderet. The Parisian was tall, athletic, fair, with blue eyes and yellow, curling hair, while the creole was dark, slight, black eyed, mysterious looking, possessing the singular magnetism of a face at once handsome and inscrutable. Bauderet's slightness was not physical frailty, however, for he was a noted swordsman, possessed of extraordinary nervous energy.

It was late in the night and the lamps were burning low, the flames flickering faintly and faltering in their brazen sockets among the pendant crystal brilliants, when Bauderet arose and said:

"Well, my dear old fellow, it is growing late, and you must not be drowsy on your wedding morn. One more cigar—just one—the best that Cuba ever gave to the lips of man, and then to your dreams."

He fetched from a little hanging cabinet a small ivory box curiously carved and mounted in gold, out of which he took two large escuros separately wrapped in silver foil. One of these he handed to Verot, at the same time lighting the other.

"The last two of a priceless lot sent me two years ago by a friend at Havana," he said.

Verot daintily brushed the almost black cigar across his nose to inhale its fragrance, and instantly recoiled, for there came from it a strange, insinuating and unbearable stench.

"That is nothing," laughed Bauderet, with a hollow, brutal ring in his voice that startled Verot. When you light it the smell disappears, and the smoke is exquisitely fine. See!" and he puffed a light cloud toward his friend's nostrils. "Isn't that incomparable bouquet?"

Verot put the cigar between his teeth and tried to light it, but the thrill of atrocious evil that flashed through his nerves caused him to let it fall.

"It's horrible!" he exclaimed. "I can't bear it!"

"Oh, what womanish qualms!" remarked Bauderet, almost testily, picking up the fallen escuro and handing it to his guest. "Smoke it; this may be our last night together, and—and"——

Something in Bauderet's voice appealed to Verot's sympathy, while at the same time it made his heart almost sink. A man lying in his coffin, ready to be buried alive, might have had such a strain in his voice. His face was white, with that ghastliness which comes in extreme moments to a dark countenance, and his eyes, strangely dilated burned with a dusky, deep set brilliance.

"You know how I feel, Verot—you know how I feel."

Again the Parisian essayed to light the cigar; but the thing was not possible. He flung it aside after inhaling one intolerable draught of its smoke.

"Ha, ha, ha!" laughed Bauderet. "You have less courage than I supposed; but then you Parisians, as I've often told you, are a degenerate set."

Verot had risen, and now stood towering above his host, his magnificent frame expanding and a determined look in his fine, fair face.

"That cigar was poisoned!" he exclaimed, with dramatic energy of expression.

"Oh, surely not!" said Bauderet, with immediate concern, stooping and picking it up. He put it to his nose.

"Why, that is strange!" he cried. "What can it mean?"

The two men looked steadily, searchingly into each other's eyes, and slowly but clearly read the whole situation. One was aware that his deadly purpose had been discovered, the other knew that death was lurking for him in every corner of that gloomy old house. Verot was the first to speak.

"How shall we settle this?" he demanded, in a hard, dry tone.

Bauderet laughed sardonically and puffed lazily at his cigar, meantime shrugging his shoulders as if the matter were of light consequence to him.

"I think the best way to settle it is to go to bed and sleep it off," he remarked, with a half yawn.

"Scoundrel, villain, murderer!" exclaimed Verot, permitting for the moment his indignation to master him, "you shall answer to me now!"

"Oh, certainly, if you wish," said Bauderet calmly. "My sword room is but a step from here. Follow me if you're not afraid."

Verot followed, but not without a strange sense of insecurity. It was as if some treachery were about to be sprung upon him at every step while they passed through two or three dim rooms and along a low, narrow passage between damp brick walls, then into a bare, windowless little room.

"See here," said Bauderet, stopping close to one of the dismal walls, "this doesn't look like a door, does it?"

He fumbled a moment about a certain spot, pressed a hidden spring and pushed open a low shutter, disclosing another cell like apartment, dank, grimy and ill smelling. Into this Verot followed him. They halted and faced each other, a little lamp carried by Bauderet lighting up their drawn, and ghastly faces.

"We can settle our little trouble here without the slightest fear of being interrupted. This is where, as I have heard, one of my reckless kinsmen, who formerly owned the house, used to confine stolen slaves what time he was awaiting a chance to run them off. Nobody living save myself knows that this room exists."

He smiled cynically, and lifting the lamp gazed around at the slime on the reeking bricks. Then he made a little petulant motion and said:

"The swords—the rapiers—I have forgotten them. Hold this lamp a moment, please!"

Verot mechanically accepted the proffered light; but as he did so something in Bauderet's look, or in his movement, put him on his guard, or rather startled him a little.

"You'll not be afraid to stand here a moment while I go fetch the swords, will you?"

He placed peculiar accent on the word "afraid," and Verot felt his blood tingle in response to the insinuation.

"You shall soon have your test of skill as well as of courage," he responded; "but if you are going back after weapons you'd better take the lamp. I can wait without it."

"This is not a pleasant waiting room," sneered Bauderet, again letting his eyes slowly sweep the loathsome little cell.

He was still smoking the smoldering black cigar, and the pale rings of fragrance slowly strayed in the chill, damp air.

"Don't stand there like that," said Verot savagely, "or I'll stamp you into the floor."

"A coward would do that," retorted Bauderet, taking two or three light backward steps and pausing in the little doorway. "I have some doubts of your honor, or ought to have."

"Fetch the rapiers, sir," was all that Verot said. His terrible anger was mastering him.

Bauderet retreated one more step, then with a fiendish leer laid his hand on the heavy shutter.

"You command, but I shall take my own time to obey," he remarked in a tone of constrained excitement. "How should you like to wait in this little boudoir until your bride comes to you?"

Like a flash the meaning and the purpose of Bauderet's words and movements leaped through Verot's mind. Already the door was slowly swinging shut.

So frightful was the thought, with its infinite suggestions of horror, that the tall Parisian stood for a single moment paralyzed.

"Good night forever, Augustin Verot. May your dreams be sweet," said Bauderet.

Slowly, steadily, the door, which was in reality a hinged section of the massive wall, swung round.

Verot let fall the lamp, which, clanging brazenly on the brick floor, remained sputtering and burning there with a strange, fantastic light. Something like a death chill shivered through the air.

One long bound the Parisian made, uttering a low, harsh cry of rage and terror as he was caught between the closing door and the jaw of the doorway.

There was a struggle like the fighting of wild beasts, the men growling and panting in the extremity of their brutal straining and tearing.

Presently a body was heaved and flung. It fell in the center of the cell, and lay ghastly and motionless beside the fast dying lamp flame. Then the ponderous door went to with a dull thump and a sharp click of the hidden spring.

One of the rivals stood on the outside of the cell panting and quivering, the white froth clotted on his lips; the other lay limp and lifeless within.

* * * * * *

The mystery, which for nearly fifty years had hung over the old Bauderet homestead, was cleared up when the house was torn down. The laborers came in the course of their work to a low, narrow, hidden room, damp and repulsive, in the middle of which lay a skeleton clothed in rotten garments. This was the body of Charles Marot Bauderet, whose sudden disappearance about the time of the marriage of Isobel Des Champs to Augustin Verot had given rise to so many wild stories. In fact, so absolute had been the mystery that not the faintest clew to the missing man had ever been found until this revelation by the workmen divulged everything.

Immediately after the discovery of Bauderet's skeleton inquiry was begun as to the whereabouts of Verot, who was traced and found, an old man, widowed and childless, penniless and friendless, on the island of Corsica. He told his story as I have told it to you, and, as if the relief from the long strain of his hideous secret had relaxed his whole being, he fell at once into a state of collapse, from which nothing could rally him. He died in his seventy-fourth year, muttering with almost his last breath:

"Isobel, Isobel, it was all for you! I gave him the grave he meant to give me. It was a close and silent tomb, but at last—at last—it—has—given—ah!—given up—its—secret!"—Maurice Thompson in New York Ledger.

ORDER FIXING TIME AND PLACE FOR HEARING PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Charles D. Begole deceased.

IT APPEARING TO THE COURT, BY THE petition this day presented and filed by Thomas Parker, the Administrator of the Estate of Charles D. Begole, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the said Court that all persons interested in the estate of said deceased, appear before the said Superior Court on Tuesday, the 24th day of March, 1891, at ten o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administrator to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; amd that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

GEO. M. GILL.
Judge of the Superior Court.

Dated February 18th, 1891.

[ENDORSED.]

SUPERIOR COURT, COUNTY OF INYO.

COURT NOTES.

Geo. M. Gill, Superior Judge.

SATURDAY, February 28th.

Estate of Ezra M. Goodale, deceased—Hearing of proof of will continued until Saturday, March 14th.

Ball vs. Ball—Action for divorce. Filed complaint and issued summons.

Estate of John Mullane deceased—Filed inventory and appraisement.

WEDNESDAY, March 4th.

Estate and Guardianship of John Morton—Appraisers appointed. J. J. Morton appointed Guardian. Papers filed.

THURSDAY, March 5th.

Estate of Wm. Walker deceased—Filed creditor's claim.

Varney vs. Varney—Action for divorce. Court Commissioner appointed and testimony taken.

Ball vs. Ball—Action for divorce. Order for publication of alias summons.

Don't forget the 17th. of March at Keeler.

W. Ischinger was down from Bishop early in the week.

Mrs. Varney of Round Valley visited Independence during the week.

Mr. R. Van Dyke came up from Lone Pine on Wednesday, returning the same day.

Messrs. J. C. Crocker and W. H. Unlemeyer of Big Pine were in town several days this week.

James Hutchings Esq. came down from Bishop on Wednesday to conduct a case in the Superior Court.

Mr. and Mrs. A. L. Conklin have been visiting Independence and Georges Creek during the week.

W. S. Enos and C. Mulholland started for the city last Tuesday morning going by the way of Mojave.

Arthur Nobles came down from Candelaria last Monday. He reports deaths yet occurring from pneumonia.

Don't overlook that opportunity for getting the best 160 acres of land under the Eastside canal for six dollars an acre.

Alfalfa hay in stack and of the best quality is offered at $3 per ton at different points in the valley.

Mr. Martin Mee came in from Lookout to Darwin last Monday. He was in poor health and intended going to Lone Pine to recuperate.

It wasn't quite so spring-like this morning after all. Last night a north wind set in, and the creeks were frozen up, the thermometer registering 24° at sunrise.

Mr. and Mrs. T. J. Goodale of Fish Spring were in town last Saturday. They were here on business connected with the will of the late Ezra Goodale.

Miss Matilda Meysan returned to Lone Pine last Friday from a visit to Independence. While here she passed a very creditable examination before the Board of Education and was granted a certificate to teach.

Mr. P. La Barge was in town yesterday with his young stallion Milo Jr. The animal is not yet four years old and when weighed yesterday pulled the scales down to 1440. He will make the coming season at Lone Pine and Georges Creek.

The Supervisors held a special meeting last Monday evening. They ordered special elections to fill the vacancies in the Board occasioned by the death of J. C. Eldy and the resignation of S. G. Sneden. The elections will be held on March 10th.

The *Index*, the organ of the Eastside corporation and speaking for it, says that $100,000 has been expended on the Eastside and the Company is perfectly satisfied with the investment. If this is true the property is worth that valuation, and the County Assessor, being an honorable man and sworn to do his duty, will surely assess it at that figure.

Judge Hannah has ordered trees for planting eighty acres of apple orchard at Fish Spring. He has decided to have but three varieties, namely, White Pearman, Wine Sap and Genetin. The young trees are ordered from Ohio. The tract selected is a fine piece of land along the Big Pine road and will make a valuable and beautiful orchard.

In a long article in the *Index* Billy Matlack says: "In answer to a question by the INDEPENDENT proprietor as to how my business compared with three years ago I said it was not near so good and had not been since teams and stages ran here—a fact that all in my business can testify." That's right, Billy. Tell the truth and shame the devil. Mr Matlack does about all the blacksmithing for the Eastside Company and is a good workman.

Up till Sunday evening a great deal of rain had fallen in the valley. The bottom lands are covered with water to a great extent. Cattle tramped about in pools of water and mud till they were exhausted, and on Saturday stock owners and herders were busy most of the day driving the animals up into the sage brush land. This was hard work, as the horses sunk deep into the sodden ground at every step. The cattle reached the sage brush ground and at once lay down, weak from hunger and from standing in the mud several days. When the rain ceased, warm, bright weather set in, and grass is making rapid growth. During the recent storms an immense of snow fell upon the Sierras and now it can be seen from the valley that the canyons are all filled to a great depth.

What Farmers Say.

Last week was published what men engaged in all kinds of business had to say of the situation. The name of each man interviewed was given and each is responsible for his own report. In some cases more unfavorable things were said than was thought advisable to publish, but in no case was one word added to make the report worse than the party interviewed represented it to be. Many of those interviewed have since said, (to use their own words) "It is God's truth, every word of it."

Now, let us hear what farmers say:

A man who has been farming about twenty-five years and owns about 320 acres of the best land in the valley with an abundant supply of water available every month in the year. A reader of the best books and of magazines and newspapers, one who is both a thinker and a worker, says: "There is no money in farming. If I could sell a crop of any kind in bulk and get coin for it, it would be all right. But if I produce a crop of wheat it must be hauled to mill twenty miles or more, a load now and another some weeks afterward. I must then peddle the flour all over the country and sell or trade it in various ways. Recently I took a load of various products flour, hams, bacon and other articles, hauled them forty miles and offered the goods to merchants. The quality of the goods was very satisfactory, and I was willing to take the prices offered. The load should have realized several hundred dollars, but all the coin I got was $27. The balance I took in exchange of goods of various kinds, most of which I could have done without. If I could sell in one lot $600 worth of wheat, corn or barley and get cash down for it, my taxes, such help as I must hire during harvest, and other small bills could all be paid easily; but this I cannot do, and from year to year the difficulty increases."

Another man, who owns 400 acres of the choiceat land in the valley with all the advantages of water and location, says: "It is almost impossible to export farm produce from the valley. Freight cost is a complete bar to that. The home market is so limited that but a small amount of farm produce can be consumed. One wagon load of produce would today glut the market at Independence. It is nonsense to charge farmers with want of enterprise, for not raising larger crops, when every pound produced over what is needed for home consumption would rot. What I expect for the future is, that as stockmen have lately been increasing their interests in the valley, this will grow till stock raising will be the only interest left of any importance, and the land will be owned mostly by stockmen. If we had an opening south by rail, my opinion is that the country would settle up rapidly, and the land be divided into small tracts for orchards and vineyards. But by the time that business men realize this, it will be too late; the cattle men will have the country, and as the demand for beef is increasing rapidly the business will be very profitable and they will hold on to it. With little or nothing doing in the country but raising cattle there would be no business for a railroad. The small amount of canvas clothing, blankets and shoes needed by herders, and the trifling quantity of other merchandise needed by them, would be all the freight coming into the country, and in the end all that would remain of a railroad would be two streaks of rust. The railroad now here hauls ore, marble and soda at the lowest possible rates of freight in order to encourage those industries, and it does not appear to me that that there can be much profit for the road in that business." This man is wise and shrewd; and the foregoing opinions are deliberately expressed as the result of many years observation.

A score of such reports could be given, but as these two are fairly representative they may be enough. It is very likely that all farmers in the country would not make similar reports. For instance, Mr. E. Robinson has one of the best farms in the valley. His dwelling is about four hundred yards distant from the Post Office at Independence. He keeps a dairy and has a market for his milk and butter in the town. His orchard produces a great deal of fruit, and for that he has a market. He makes hams and bacons and can always dispose of them at fair prices. Mr. John Shepherd at Georges Creek has about fifteen hundred acres of good land. Several years ago he quit general farming except to produce what is needed for his own use and went into the business of raising mules. There is reason enough to believe that Mr. Shepherd has since been quite successful. Perhaps Mr. Thomas Williams of Round Valley would also report better than most of his neighbors. But these are exceptional cases and by no means represent the condition of the average farmer throughout the valley. But let that be as it may, business men and farmers have been allowed to speak for themselves and have been truthfully reported. Now all men may form their own opinion as to the condition of affairs in Inyo County.

Sickness.

On his return from Darwin last week Coroner Parker was taken very ill with the prevailing malady. Careful nursing and good medical attendance was had, and he is now much better and considered out of danger. Jonathan Brown has been very ill all the week, and as yet there has been no improvement. The infant daughter of Mr. and Mrs. J. J. Gunn is also suffering from the grippe, but no serious result is apprehended. N. E. Conklin is all right again and was pursuing his avocation as water fiend on Tuesday.

OFFICIAL.

ALIAS SUMMONS.

MARY A. BALL, Plaintiff, vs. ROBERT BALL, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Robert Ball, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony now existing between the Plaintiff and Defendant and for costs of suit, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief therein demanded.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 28th day of February, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.

P. H. MACK, Attorney for Plaintiff.

The mining men and poor people generally of Inyo county will hardly feel grateful to Mr. Craig for his war on silver. He says of the recent letter of Grover Cleveland on silver coinage that "a better campaign document for our party was never penned." The bitter animosity of Mr. Craigs party to silver coinage is well known; but so far as Mr. Cleveland's opinion being that of the Democratic party, that very letter has irrevocably removed all possibility of his being the Democratic nominee in 1892. The strongest plank in the Democratic and Farmers' Alliance platforms will be FREE SILVER COINAGE. And no man will receive the nomination at the hands of the Democratic party who is not thoroughly in accord with this principle.

Meteorological Summary.

Following is the report of the Signal Service Station at Keeler for the month of February, 1891.

Mean barometer 29.892
Highest barometer 30.374
Lowest barometer 29.149
Mean temperature 42.0
Highest temperature, 14th ..... 65.
Lowest temperature, 19th ..... 20.
Greatest daily range temp'ture, 27th, 26.
Least daily range temperature, 23d, 9.
Prevailing direction of wind, N. W.
Total movement of wind, 5681 miles.
Extreme velocity of wind, direction and date, 46 miles on 8th.
Total precipitation, 0.98 inches.
Number of days on which .01 inch or more of precipitation fell, 5.
Number of cloudless days 11
Partly cloudy days 7
Cloudy days 10

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

IRWINS' SALOON

[illegible] wards and Market Streets,

Independence, Cal.

Talking of patent medicines—you know the old prejudice. And the doctors—some of them are between you and us. They would like you to think that what's cured thousands won't cure you. You'd believe in patent medicines if they didn't profess to cure *everything*—and so, between the experiments of doctors, and the experiments of patent medicines that are sold only because there's money in the "stuff," you lose faith in *everything*.

And, you can't always tell the prescription that cures by what you read in the papers. So, perhaps, there's no better way to sell a remedy, than to tell the truth about it, and take the *risk* of its doing just what it professes to do.

That's what the World's Dispensary Medical Association, of Buffalo, N. Y., does with

Dr. Pierce's
Golden Medical Discovery,
Favorite Prescription,
Pleasant Pellets, and
Dr. Sage's Catarrh Remedy.

If they don't do what their makers say they'll do—you get your money back.

Though all obscure may be his birth,
Though he has won no battle scar,
Mongst all the people on this earth
He takes first rank with his cigar.

BEWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY.

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, and acts directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co.

Sold by Druggists, price 75c. per bottle.

The actress who is "wedded to her art" gets a divorce as soon as the right man comes along.

Dr. Wallace Ely has removed his offices to 215 Powell St., San Francisco, Cal., where he continues to give special attention to Kidneys, Bladder, Prostate Gland and all diseases arising therefrom. Diabetes and Bright's Disease treated according to the latest approved method. Most cases can be treated successfully by correspondence. Consultations daily from 10 A. M. to 4 P. M. WALLACE ELY, M. D., 215 Powell St., 3 doors from Geary St., San Francisco, Cal.

He—I do not expect to go out in society much this winter; I am going to hibernate. She—Indeed? I went to Ireland last summer.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c. and $1.00 per box. WILLIAMS MFG CO., Props., Cleveland, O.

"But you have no ancestors, ye know!" said his Lordship. "No," replied Miss Lakeview, "we have the advantage of you there."

CONSUMPTION SURELY CURED.

TO THE EDITOR—Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption if they will send me their express and post-office address. Respectfully,
T. A. SLOCUM M. C., 181 Pearl St., New York.

The meat of a volume is generally found on the table of contents.

Why *rub*, and *tail*, and *wear* out yourself and your clothes on washday, when, ever since 1861, Dobbins' Electric Soap has been offered on purpose to lighten your labor, and save your clothes. *Now* try it. Your grocer has it.

Married women nowadays use a larger visiting card than single women. Somehow married people seem to have all the luxuries.

Irritation of the Throat and Hoarseness immediately relieved by "*Brown's Bronchial Troches.*"

If afflicted with Sore Eyes, use Dr. Isaac Thomson's Eye Water. Druggists sell it. 25c.

Try Germea for Breakfast

"German Syrup"

A Cough and Croup Medicine.

For children a medicine should be absolutely reliable. A mother must be able to pin her faith to it as to her Bible. It must contain nothing violent, uncertain, or dangerous. It must be standard in material and manufacture. It must be plain and simple to administer; easy and pleasant to take. The child must like it. It must be prompt in action, giving immediate relief, as childrens' troubles come quick, grow fast, and end fatally or otherwise in a very short time. It must not only relieve quick but bring them around quick, as children chafe and fret and spoil their constitutions under long confinement. It must do its work in moderate doses. A large quantity of medicine in a child is not desirable. It must not interfere with the child's spirits, appetite or general health. These things suit old as well as young folks, and make Boschee's German Syrup the favorite family medicine. ⓪

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

Her little muslin cap blew back like the wings of a white butterfly. Her sunny hair caught the last sun rays. Her feet were fair in the brown wooden shoes. Under the short woolen skirts the grace of her pretty limbs moved freely. Her broad silver clasps shone like a shield, and she was utterly unconscious that any one looked; she was simply and gravely intent on reaching St. Gudule to say her one prayer and not keep the children waiting.

Some one leaning idly over a balcony in the street that is named after Mary of Burgundy saw her going thus. He left the balcony and went down his stairs and followed her.

The sun dazzle on the silver had first caught his sight, and then he had looked downward at the pretty feet.

These are the chances women call fate.

Bebee made her salutations to the high altar, and stole on into the chapel of the Saint Sacrament; it was that one that she loved best.

She said her prayer and thanked the saints for all their gifts and goodness, her clasped hand against her silver shield, her basket on the pavement by her, chiseled the sunset rays streaming purple and crimson and golden through the painted windows that are the wonder of the world.

When her prayer was done she still kneeled there, her head thrown back to watch the light, her hands clasped still, and on her upturned face the look that made the people say, "What does she see—the angels or the dead?"

She forgot everything. She forgot the cherries at home, and the children even. She was looking upward to the stories of the painted panes; she was listening to the message of the dying sunrays; she was feeling vaguely, wistfully, unutterably the tender beauty of the sacred place and the awful wonder of the world in which she with her sixteen years was all alone, like a little blue corn flower among the wheat that goes for grist and the barley that makes men drunk.

"What does she see, the angels or the dead?"

For she was alone, though she had so many friends. Quite alone sometimes; for God had been cruel to her, and had made her a lark without song.

When the sun faded and the beautiful casements lost all glow and meaning, Bebee rose with a startled look—had she been dreaming?—was it night?—would the children be sorry and go supperless to bed?

"Have you a rosebud left to sell to me?" a man's voice said not far off; it was low and sweet, as became the Sacrament chapel.

Bebee looked up; she did not quite know what she saw; only dark eyes smiling into hers.

By the instinct of habit she sought in her basket and found three moss roses, she held them out to him.

"I don't sell flowers here, but I will give them to you," she said, in her pretty, grave, childish fashion.

"I often want flowers," said the stranger, as he took the buds. "Where do you sell yours—in the market?"

"In the Grand place."

"Will you tell me your name, pretty one?"

"I am Bebee."

There were people coming into the church. The bells were booming abovehead for vespers. There was a shuffle of chairs and a stir of feet. Boys in white went to and fro, lighting the candles. Great clouds of shadow drifted up into the roof and hid the angels.

She nodded her little head to him.

"Good night; I cannot stay. I have a cake at home to-night, and the children are waiting."

"Ah! that is important, no doubt, indeed. Will you buy some more cakes for the children from me?"

He slid a gold piece in her hand. She looked at it in amaze. In the green lanes by Laeken no one ever saw gold. Then she gave it him back.

"I will not take money in church, nor anywhere, except what the flowers are worth. Good night."

He followed her and held back the heavy oak door for her and went out into the air with her.

It was dark already, but in the square there was still the cool, bright, primrose colored evening light.

Bebee's wooden shoes went pattering down the sloping and uneven stones. Her little gray figure ran quickly through the deep shade cast from the towers and walls. Her dreams had drifted away. She was thinking of the children and the cake.

"You are in such a hurry because of the cake!" said her new customer, as he followed her.

Bebee looked back at him with a smile in her blue eyes.

"Yes; they will be waiting, you know, and there are cherries, too.

"It is a grand day with you then?"

"It is my fete day; I am 16."

She was proud of this. She told it to the very dogs in the street.

"Ah! you feel old, I dare say?"

"Oh, quite old! They cannot call me a child any more."

"Of course not; it would be ridiculous. Are these presents in your basket?"

"Yes, every one of them." She paused a moment to lift the dead vine leaves and show him the beautiful shining red shoes. "Look!—old Gringoire gave me these. I shall wear them at mass next Sunday. I never had a pair of shoes in my life."

"But how will you wear shoes without stockings?"

It was a snake cast into her Eden.

She had never thought of it.

"Perhaps I can save money and buy some," she answered, after a sad little pause. "But that I could not do till next year. They would cost several francs, I suppose."

"Unless a good fairy gives them to you?"

Bebee smiled; fairies were real things to her—relations indeed. She did not imagine that he spoke in jest.

"Sometimes I pray very much and things come," she said, softly. "When the Gloire de Dijon was cut back too soon one summer, and never blossomed, and we all thought it was dead, I prayed all day long for it, and never thought of anything else; and by autumn it was all in new leaf, and now its flowers are finer than ever."

"But you watered it whilst you prayed, I suppose?"

The sarcasm escaped her.

She was wondering to herself whether it would be vain and wicked to pray for a pair of stockings; she thought she would go and ask Father Francis.

By this time they were in the Rue Royale, and half way down it. The lamps were lighted. A regiment was marching up with a band playing. The windows were open and people were laughing and singing in some of them. The light caught the white and gilded fronts of the houses. The pleasure seeking crowds loitered along in the warmth of the evening.

Bebee, suddenly roused from her thoughts by the loud challenge of the military music, looked round on the stranger, and motioned him back.

"Sir—I do not know you—why should you come with me? Do not do it, please. You make me talk, and that makes me late."

And she pushed her basket further on her arm, and nodded to him, and ran off—as fleetly as a hare through fern—among the press of the people.

"To-morrow, little one," he answered her with a careless smile, and let her go unpursued. Above, from the open casement of a cafe, some young men and some painted women leaned out, and threw sweetmeats at him, as in carnival time.

"A new model—that pretty peasant?" they asked him.

He laughed in answer, and went up the steps to join them; he dropped the moss roses as he went, and trod on them, and did not wait.

CHAPTER IV.

Bebee ran home as fast as her feet would take her.

The children were all gathered about her gate in the dusky, dewy evening; they met her with shouts of welcome and reproach intermingled; they had been watching for her since first the sun had grown low and red, and now the moon was risen.

But they forgave her when they saw the splendor of her presents, and she showered out among them Pere Melchior's horn of comfits.

They dashed into the hut, they dragged the one little table out among the flowers, the cherries and cake were spread on it, and the miller's wife had given a big jug of milk, and Father Francis himself had sent some honeycomb.

The early roses were full of scent in the dew; the great gillyflowers breathed out fragrance in the dusk; the goat came and nibbled the sweetbrier unrebuked; the children repeated the Flemish bread grace, with clasped hands and reverent eyes: "Oh, dear little Jesus, come and sup with us, and bring your beautiful Mother too; we will not forget you are God." Then, that said, they ate, and drank, and laughed, and picked cherries from each other's mouths like little blackbirds; the big white dog gnawed a crust at their feet, old Krebs, who had a fiddle, and could play it, came out and trilled them rude and ready Flemish tunes, such as Teniers or Mieris might have jumped to before an ale house at the Kermesse; Bebee and the children joined hands, and danced round together in the broad white moonlight, on the grass and by the water side; the elders came and sat about, the women netting or spinning, and the men smoking a pipe before bed time; the rough, hearty Flemish bubbled like a brook in gossip, or rung like a horn over a jest; Bebee and the children, tired of their play, grew quiet, and chanted together the "Ave Maria Stella Virginis," a nightingale among the willows sang to the sleeping swans.

All was happy, quiet, homely; lovely also in its simple way.

They went early to their beds, as people must do who rise at dawn.

Bebee leaned out a moment from her own little casement ere she too went to rest.

Through an open lattice there sounded the murmur of some little child's prayer; the wind sighed among the willows; the nightingales sang on in the dark—all was still.

Hard work awaited her on the morrow, and on all the other days of the year.

She was only a little peasant—she must sweep, and spin, and dig, and delve, to get daily her bit of black bread—but that night she was as happy as a little princess in a fairy tale, happy in her playmates, in her flowers, in her sixteen years, in her red shoes, in her silver buckles, because she was half a woman, happy in the dewy leaves, in the singing birds, in the hush of the night, in the sense of rest, in the fragrance of flowers, in the drifting changes of moon and clouds; happy because she was half a woman, because she was half a poet, because she was wholly a poet.

"Oh, dear swans, how good it is to be 16!—how good it is to live at all!—do you not tell the willows so?" said Bebee to the gleam of silver under the dark leaves by the water's side, which showed her where her friends were sleeping, with their snowy wings closed over their stately heads, and the veiled gold and ruby of their eyes.

The swans did not awake to answer.

Only the nightingale answered from the willows, with Desdemona's song.

But Bebee had never heard of Desdemona, and the willows had no sigh for her.

"Good night!" she said, softly, to all the green dewy sleeping world, and then she lay down and slept herself. The nightingale sang on, and the willows trembled.

CHAPTER V.

"If I could save a centime a day, I could buy a pair of stockings this time next year," thought Bebee, locking her shoes with her other treasures in her drawer the next morning, and taking her broom and pail to wash down her little palace.

But a centime a day is a great deal in Brabant, when one has not always enough for bare bread, and when, in long chill winter, one must weave thread lace all through the short daylight for next to nothing at all, for there are so many women in Brabant, and every one of them, young or old, can make lace, and if one do not like the pitiful wage, one may leave it and go and die, for what the master lace makers care or know; there will always be enough, many more than enough, to twist the thread round the bobbins, and weave the bridal veils, and the trains for the courts.

"And besides if I can save a centime the Varnhart children ought to have it," thought Bebee, as she swept the dust together. It was so selfish of her to be dreaming about a pair of stockings when those little things often went for days on a stew of nettles.

So she looked at her own pretty feet—pretty, and slender, and arched, rosy and fair, and uncramped by the pressure of leather—and resigned her day dream with a brave heart, as she put up her broom and went out to weed, and hoe, and trim, and prune the garden that had been for once neglected the night before.

"One could not move half so easily in stockings," she thought with true philosophy, as she worked among the black, fresh, sweet smelling mold, and kissed a rose now and then as she passed one.

When she got into the city that day, her rush bottomed chair, which was always left upside down, in case rain should fall in the night, was set ready for her, and on its seat was a gay, gilded box, such as rich people give away full of bonbons.

Bebee stood and looked from the box to the Broodhuis, from the Broodhuis to the box; she glanced around, but no one had come there so early as she, except the tinker, who was busy quarreling with his wife and letting his smelting fire burn a hole in his breeches.

"The box was certainly for her, since it was set upon her chair?"—Bebee pondered a moment; then little by little opened the lid.

Within, on a nest of rose satin, were two pair of silk stockings!—Real silk!—with the prettiest clocks worked up their sides in color!

Bebee gave a little scream, and stood still, the blood hot in her cheeks, no one heard her, the tinker's wife, who alone was near, having just wished heaven to send a judgment on her husband, was busy putting out his smoking small clothes. It is a way that women and wives have, and they never see the bathos of it.

The place filled gradually.

The customary crowds gathered. The business of the day began underneath the multitudinous tones of the chiming bells. Bebee's business began, too; she put the box behind her with a beating heart and tied up her flowers.

It was the fairies, of course!—but they had never set a rush bottomed chair on its legs before, and this action of theirs frightened her.

It was rather an empty morning. She sold little, and there was the more time to think.

About an hour after noon a voice addressed her.

"Have you more moss roses for me?"

Bebee looked up with a smile, and found some. It was her companion of the cathedral. She had thought much of the red shoes and the silver clasps, but she had thought nothing at all of him.

"You are not too proud to be paid today?" he said, giving her a silver franc—he would not alarm her with any more gold; she thanked him, and slipped it in her little leathern pouch, and went on sorting some clove pinks.

"You do not seem to remember me?" he said, with a little sadness.

"Oh, I remember you," said Bebee, lifting her frank eyes. "But you know I speak to so many people, and they are all nothing to me."

"Who is anything to you?" It was softly and insidiously spoken, but it awoke no echo.

"Varnhart's children," she answered him, instantly. "And old Annemie by the wharfside—and Tainbour—and Antoine's grave—and the starling—and, of course, above all, the flowers."

"And the fairies, I suppose?—though they do nothing for you."

She looked at him eagerly.

"They have done something today. I have found a box, and some stockings—such beautiful stockings! Silk ones! Is it not very odd?"

"It is more odd they should have forgotten you so long. May I see them?"

"I cannot show them to you now. Those ladies are going to buy. But you can see them later—if you wait."

"I will wait and paint the Broodhuis."

"So many people do that; you are a painter then?"

"Yes—in a way."

He sat down on an edge of the stall, and spread his things there, and sketched, while the traffic went around them. He was very many years older than she; handsome, with a dark, and changeful, and listless face; he wore brown velvet, and had a red ribbon at his throat; he looked a little as Egmont might have done when wooing Claire.

Bebee, as she sold the flowers and took the change fifty times in the hour, glanced at him now and then, and watched the movements of his hands—she could not have told why.

He spoke to her rarely, and sketched on and on in rapid bold strokes the quaint graces and massive richness of the Maison du Roi.

The painter took a long time. He set about it with the bold ease of one used to all the intricacies of form and color, and he had the skill of a master. But he spent more than half the time looking idly at the humors of the populace or watching how the treasures of Bebee's garden went away one by one in the hands of strangers.

Meanwhile, ever and again, sitting on the edge of her stall, with his colors and brushes tossed out on the board, he talked to her, and, with the soft, imperceptible skill of long practice in those arts, he drew out the details of her little simple life.

There were not always people to buy, and whilst she rested and sheltered the flowers from the sun she answered him willingly, and in one of her longer rests showed him the wonderful stockings.

"Do you think it could be the fairies?" she asked him a little doubtfully.

It was easy to make her believe any fantastical nonsense; but her fairies were ethereal divinities. She could scarcely believe that they had laid that box on her chair.

"Impossible to doubt it!" he replied unhesitatingly. "Given a belief in fairies at all, why should there be any limit to what they can do? It is the same with the saints, is it not?"

"Yes," said Bebee, thoughtfully.

The saints were mixed up in her imagination with the fairies in an intricacy that would have defied the best reasonings of Father Francis.

"Well, then, you will wear the stockings, will you not? Only, believe me, your feet are far prettier without them."

Bebee laughed happily, and took another peep in the cozy rose satin nest. But her little face had a certain perplexity. Suddenly she turned on him.

"Did not you put them there?"

"I—never!"

"Are you quite sure?"

"Quite; but why ask?"

"Because," said Bebee, shutting the box resolutely and pushing it a little away, "because I would not take it if you did. You are a stranger, and a present is a debt, so Antoine always said."

"Why take a present then from the Varnhart children, or your old friend who gave you the clasps?"

"Ah, that is very different. When people are very, very poor, equally poor, the one with the other, little presents that they save for and make with such a difficulty, are just things that are a pleasure; sacrifices, like your sitting up with a sick person at night and then she sits up with you another year when you want it. Do you not know?"

"I know you talk very prettily. But why should you not take any one else's present, though he may not be poor?"

"Because I could not return it."

"Could you not?"

The smile in his eyes dazzled her a little; it was so strange, and yet had so much light in it; but she did not understand him one whit.

"No; how could I?" she said earnestly. "If I were to save for two years, I could not get francs enough to buy anything worth giving back; and I should be so unhappy, thinking of the debt of it always. Do tell me if you put those stockings there?"

"No," he looked at her, and the trivial lie faltered and died away; the eyes, clear as crystal, questioned him so innocently.

"Well, if I did?" he said frankly, "you wished for them; what harm was there? Will you be so cruel as to refuse them from me?"

The tears sprang into Bebee's eyes. She was sorry to lose the beautiful box, but more sorry he had lied to her.

"It was very kind and good," she said, regretfully. "But I cannot think why you should have done it, as you had never known me at all. And, indeed, I could not take them, because Antoine would not let me if he were alive, and if I gave you a flower every day all the year round I should not pay you the worth of them—it would be quite impossible, and why should you tell me falsehoods about such a thing? A falsehood is never a thing for a man."

"A falsehood is never a thing for a man."

She shut the box and pushed it towards him and turned to the selling of her bouquets. Her voice shook a little as she tied up a bunch of mignonette and told the price of it.

Those beautiful stockings! why had she ever seen them, and why had he told her a lie?

(TO BE CONTINUED.)

An on Goodspeed, an old and much respected citizen of Healdsburg, and one of the pioneer settlers of California, died at his residence in that town Friday last.

A FACT.

(From an interview, *N. Y. World.*)

In an interview with a leading drug-house the *N. Y. World*, Nov. 9, 1890, gives the following comment on the proprietors of reliable patent medicines:

"He is a specialist, and should know more of the disease he actually treats than the ordinary physician; for while the latter may come across say fifty cases in a year of the particular disease which this medicine combats, its manufacturer investigates thousands. Don't you suppose his prescription, which you buy ready made up for 50 cents, is likely to do more good than that of the ordinary physician, who charges you anywhere from $2 to $10 for giving it, and leaves you to pay the cost of having it prepared?

"The patent medicine man, too, usually has the good sense to confine himself to ordinary, every-day diseases. He leaves to the physician cases in which there is immediate danger to life, such as violent fevers. He does this because, in the treatment of such cases, there are other elements of importance besides medicine, such as proper dieting, good nursing, a knowledge of the patient's strength and so on. Where there is no absolute danger to life, where the disease is one which the patient can diagnose for himself or which some physician has already determined, the patent medicine maker says fearlessly: 'I have a preparation which is better than any other known and which will cure you.' In nine cases out of ten his statement is true."

This is absolutely true as regards the great remedy for pain, St. Jacobs Oil. It can assert without fear of contradiction, that it is a prompt and permanent cure of pain. It can show proofs of cures of chronic cases of 20, 30 and 40 years' standing. In truth it rarely ever fails if used according to directions, and a large proportion of cures is made by half the contents of a single bottle. It is therefore the best.

The glazier's cry is one of pane,
The driver's one of whoa;
But happy farmers ne'er complain,
They only cry Boe! hoe!

IF YOU HAD A FRIEND

About to visit some section of country where malarial disease, either in the form of chills and fever or bilious remittent was particularly rife, what would be about the best advice you could give him? We will tell you—to carry along, or procure on arriving, that potent medicinal safeguard, Hostetter's Stomach Bitters, known throughout malaria plagued regions here and in other countries, as the surest means of disarming the miasmatic contagion and robbing it of its fell destructive influence. Not only does it fortify the system by increasing its stamina, but overcomes irregularity of digestion, the liver and the bowels, and counteracts the unfavorable effects of over-exertion, bodily and mental exposure in rough weather, or occupation too sedentary or laborious, loss of appetite and excessive nervousness. The functions of alimentation, bilious secretion and sleep have in it a most powerful and reliable auxiliary.

Kept Pretty Busy.—He—Do you always read fashion notes in the paper? She—No, I stop occasionally for meals.

VALUABLE DISCOVERY FOR THE BLIND.

Dr. La Grange wishes to make known his *New Treatment* for the cure of all diseases of the Eye—*Cataract, Defective Vision, Inflammation*, etc., etc., without Operation or Pain. The remedy can be applied by the patient, and is simple, safe and sure in its effects, strengthening the muscles and nerves of the eye, removing pain almost instantaneously. It is a marvelous discovery and a blessing to the sufferer.

For further particulars address with stamped envelope, R. J. LA GRANGE, M. D., 215 Powell St., third door from Geary, San Francisco, Cal.

A GUIDE FOR THE AFFLICTED.

The following letter will show the way to health to many a down hearted man and woman.

H. S. R. Mather, Moravia, Cayuga Co., N. Y., writes:

"I have been afflicted for some years with liver complaint, accompanied with dyspepsia and prolonged constipation. I was almost in despair when I commenced using BRANDRETH'S PILLS. I took a course of them for a week—five or six pills every night. I found myself very much better, but to make everything all sure, continued to take one pill a night for over a month. I am now in a very fair state of health, and I know I shall continue so as long as I take one BRANDRETH'S PILL a night."

Diversity.—"All men don't think alike." "Why, of course not; some 'guess,' others 'reckon,' and still others 'fancy.'"

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

CALIFORNIA FIG SYRUP CO.
SAN FRANCISCO, CAL.
LOUISVILLE, KY. NEW YORK, N.Y.

TO THE SPORTSMAN.

Camp life has a peculiar charm; but, to truly enjoy it, you must be prepared for all kinds of weather. Did you ever catch your rubber coat on a sharp twig or rough rock, and spoil it the first day? Ask any hunter or sportsman who uses a "Fish Brand Slicker," how he likes them. He will tell you it is tent, blanket, and coat, all in one. Light, dry, and warm, and will stand any amount of hard usage. No need of being concerned about the weather. Why do you wait till it rains, when you can be provided for all weather if you buy a "Fish Brand Slicker" now? Don't wait. A day's delay may be the cause of a month's sickness: can you afford to take the risk? Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

GEMS AND JEWELS RARE.

Diamonds Still the Leading Valuable Stone.

CHAT WITH A CHICAGO JEWELRY CLERK.

An Uncommon Stone.—Scarcity of Emeralds.

"Diamonds are still trumps among jewels," said a jeweler's clerk in a State street store, "and, in spite of the changing fashions in jewels, the diamond remains the king of precious stones as far as popularity goes. Turquoise, sapphires, emeralds and rubies are increasing in popularity, however, and are very expensive. The emerald and ruby seem to be getting scarcer and dearer every year. Why, a fine three carat ruby is worth $45 any time, and the emerald is worth nearly as much. Some very common rubies will bring $50 to $100. There are fewer rubies being found every year. It is the same with emeralds, besides the latter are seldom perfect. I cannot recollect having ever seen a flawless emerald, and I don't believe any one else in the store ever did either. In every one of them will be found a 'feather,' a crack, or a 'cloud' of some kind. It seems as if every stone had been struck with a hammer and stunned. The edges will be all right, but the center will look as if it had cracked without splitting, or else there will be a cloud or flaw of some sort. Rubies are apt to be the same, although not so much so as emeralds. Those emeralds on that cotton there are 'doublets.' Don't you know what a doublet is? Why, it's a manufactured stone; that is, it is a joining of two stones. Look at this emerald. Pretty, isn't it? Beautiful tint of green. Now turn it upside down. There, see that rim of red around the edge? A doublet always has that, no matter what the color of the amalgamated stones was. But it only shows when you turn the stone upside down. See, they have even put a flaw in the surface to further simulate genuineness. They can make doublets of any stones which will cement together, and make them so cleverly that the unpracticed eye will never detect the fraud—if you call it that."

"Do you not have to guard against spuriousness in other gems besides the diamond?"

"Certainly. Turquoise is simulated by jewel counterfeiters. Two small and inferior stones will be 'doubled' into a stone that will cause even experts to exercise the greatest care in examining. Or they will be pulverized and mixed up with foreign matter in such a way that the new jewel will have nearly all the brilliancy of color and polish of surface possessed by the genuine article. The light blue Persian turquoise is the rare variety at present and is very expensive."

"In the window is a white sapphire. How is that? I supposed all sapphires were blue."

"Then you supposed wrong, but you are with the majority. Most people think that all sapphires are blue, but that is far from the truth. The one in the window is pure white, as pure as a diamond. Besides those there are violet, pink and yellow sapphires. The violet and pink varieties are very beautiful and considered extra fine jewels. The yellow sapphires partake of the nature of the chrysoberyl, which comes also in yellow and brown and pale green. It is a rather uncommon stone and a very beautiful one."

"What is that green stone on the cotton in the corner?"

"That is another very uncommon stone. They call it Alexandrite. It is an oriental jewel, and there are not many brought to this country. It is very expensive and is very highly prized by connoisseurs, who are the purchasers of most of them. It is a peculiar stone, changing its light. In the day it is as you see it, a dirty green, but by night it is full of reddish lights. It comes in various sizes, from one to eight carats, and is sometimes almost as expensive as a diamond."

"Are opals popular?"

"Much more so than they were. There was a time when you could hardly sell an opal at any price. Now there is a constant demand for them. The superstitious regarded them as unlucky, and so widespread was the hallucination that it was seldom you saw one worn."

"How about cat's-eyes?"

"Cat's eyes are very hard stones, found in various countries. The best come from Persia and the east. I have one of a brownish tint that is worth $500 any day. A cat's eye weighing three carats will bring $600 easily. Tiger's eye are inexpensive and very popular. The tiger's eye is not a stone, as is generally supposed, but petrified wood. It is found in very large quantities in northern Michigan, but most of the better kind comes from a petrified forest of Arizona. There they find it in sections as large as a tree trunk. They are made up into scarf pins, rings and other articles of jewelry."

"Which distinctively American stone is the most valable?"

"I can't say that any distinctively American stone is very valuable, but we produce a few diamonds. They come from Iowa and Wisconsin. They are small and are too yellow. I do not think this country, however, will ever produce very many diamonds; still it is interesting to know that genuine stones can really be met with occasionally. Here's an odd stone, that mottled green and black one. They call it chrocilodite. They come from northern Michigan, and in that size are worth about $15. Sometimes they are mottled and divide exactly like the upper shell of a turtle, and I once made a scarf pin of one of them, fixing on the legs, tail and head of gold. We sell quite a few of those aquamarines and the pink topaz, which is quite common nowadays, is greatly sought after. Here are some pearls. No, that's an imitation, I thought you would be deceived. I think they are made of wax, but they have succeeded in making as perfect an imitation as is possible. They preserve, too, the irregular shape of the genuine pearl. By the way, I might say right here that some of the prettiest pearls we get are found in the fresh water clams of Illinois and other western states. Look at these," and the jeweler showed a handful of pearls all the way from twice the size of a grain of wheat down to that of a pin's head. They were irregular in shape, but most of them were full of subdued and delicate half tints of blue, purple and pink. "These are first rate pearls for their size and come from the Miami, Wabash, Illinois and Sangamon rivers.—Chicago Times.

It has been discovered that at least a portion of the "great American desert" is underlaid by a stratum of water which may be reached by boring from 100 to 200 feet. The wells flow so bountifully that one of them will water thoroughly five or six acres of land.—Frank Leslie's.

Kodacks at a Railroad Wreck.

Superintendent Husted, of the Cincinnati, Hamilton and Dayton, doesn't like the kodak, and his experience of the last few days does not lessen his dislike. When the wreck occurred at Oxford the "kodak fiends" were out in force to make sketches of the scene. As a business proposition Mr. Husted objected to photography of the affair being sent broadcast over the country, and many of the kodak manipulators consented to his request and left the place. One chap with a fine instrument would not listen to anything and insisted on taking a picture. At last the superintendent told him he was trespassing on the company's grounds, and the man with the kodak remarked that he would go to an adjoining field and secure a view.

The superintendent told him that he would be trespassing there also. This made the chap angry. Mr Husted is an exceedingly mild mannered man, but he grew warm under the collar. "I have tried to treat you as a gentleman," exclaimed he, "and you won't let me. Now, I'll treat you like a tough. If you attempt to make a picture of this wreck I'll smash that kodak over your infernal head." The kodak fiend evidently believed that Husted would make his word good, for he went back to Oxford on a work train.

While Superintendent Husted was thus engaged Chief Engineer Porter and his assistants were chasing kodak fiends over the surrounding country with clubs. The wary men with the cameras didn't hold choice points of view, but it's fair to guess that they are loaded with snap shots at that wreck.—Indianapolis News.

A Story of 5,000 Manuscripts.

I know an editor who is at the head of a popular periodical which, from its peculiar character, invites and receives probably more manuscripts in a single year than such magazines as The Century, Scribner's or Harper's. This year he has already exhausted two manuscript record books, each holding 2,000 entries, and the third is already half filled. In other words, he has received in ten months more than 5,000 manuscripts. I had the curiosity to look into the figures last week which this enormous deluge of manuscripts told, and they were interesting. There had been received, for example, a trifle more than 500 short stories, yet only 11 of these had been accepted, less than 2 per cent! Of over 1,500 poems a few over 30 had been accepted, a little better than 2 per cent! and yet every manuscript had been carefully read, and the position of the magazine is such that it is in a way of getting much good material.—Edward W. Bok's Letter.

Epidemics Among Animals.

The epidemics which show themselves at certain intervals in cattle and other domesticated animals have recently been the subjects of many reports and discussions. Among these diseases none has attracted more attention than that which has recently decimated canaries and other cage birds. Not very long ago upward of 1,800 canaries died in one year at Norwich, England, and occasioned a loss to the owners estimated at about $5,000. A medical man is now stated to be hard at work inquiring as to the true cause of the disease, which at present is thought to partake of the character of diphtheria The subject is an important one, as the transmission of diphtheria to children from domestic animals has come to be not only frequent but occasionally most serious in effects.—New York Commercial Advertiser.

Educating Farmers' Children.

A movement is on foot in Denmark, corresponding with the needlework industries of England and Ireland, to advance the farming and dairy interests for the benefit of women. Little girls are being trained to raise poultry, make cheese and butter, and brand them with the badge of excellence. The agricultural, industrial and scientific worlds are levied upon for improved machinery and appliances. Not only are the cattle fed in Danish fashion, but by the use of special methods 10 per cent. more butter is extracted from a gallon of milk than ever before. These fancy products are put in the highest markets and yield a revenue not to be approached by the old system of women's work.—London Letter.

Checks Found in a Dump.

Two checks for quite a large amount recently sent by a Saco, Me., man to a Portland firm have had quite an interesting history. As the Portland firm at first denied having received them, it was at first thought that they had been stolen, but it was at last concluded that they had found their way to the waste basket by mistake. This supposition was followed up, and four men were kept at work all day Sunday turning over with pitchforks the dump heap on one of the Portland wharves. It was like hunting for a needle in a haystack, but the search was successful, and the two checks were at last recovered.—Philadelphia Ledger.

While Mr. Williams, of Montezuma, Ga., was driving under an oak tree at dusk the other day he was amazed to find his horse leave the ground and remain in the air. Investigation proved that the affair was not supernatural, as the animal got caught in a swing hanging from a bough of the tree.

Among the latest disinfectants is "lysol," which appears to be very much like carbolic acid. The emulsifying agent is resin or fat soap, tar acid being incorporated with the soap at the moment of saponification.

It has been proposed to make the upper half of war balloons of very thin steel and the lower portion of ordinary balloon material, the whole so constructed as to hold hydrogen instead of ordinary gas.

Blackening the nose and cheeks under the eyes has been found an effectual preventive of snow blindness, or the injurious effect of the glare from illuminated snow upon eyes unaccustomed to it.

KATE FIELD'S SCHEME.

Her Idea of the Club of the Future.

AN ORGANIZATION FOR BOTH SEXES.

The Necessity of such an Institution. Benefits.

Some of us were startled a while ago by reading that certain New York women had founded a woman's club. I was very glad to learn of the innovation, and have been fighting in its defense privately ever since, as the idea seems to be particularly obnoxious to the average intellect. Why should there not be clubs not for men only nor for women only, but for men and women, which could become social centers in the elongated babel of New York? Only the very wealthy can now afford to entertain. Well to do intelligence starves for lack of a natural interchange of ideas and sympathies. Occasional theatre parties and suppers, while significantly expensive, no more nourish healthy friendships than lightning nourishes the growing grass.

Confine the healthy ebullition of social instinct, and explosion ensues. If women are to be helpmates to their husbands, if they are to be wise mothers, they must know the real world by actual contact. Without freedom there is no intelligent virtue. Many a man, from inherited habits of thought, entertains oriental ideas without knowing it.

FEATURES OF THE CLUB.

Rank treason, I dare say. Hence I am prepared for many a feminine shriek of disgust, for the howl that will rend many a manly bosom, for the scorn that will sit upon many a manly countenance, for the anathemas against the unsexing of the sex that will proceed from many a manly tongue; but howl, scorn and anathema are not argument, and argument is what I want.

Women require relaxation as well as men; women need the friction of intelligent minds more than men, for the reason that their lives are more secluded; women, especially those who live in the suburbs, need a place of rendezvous where they can read papers and magazines and encounter their friends unceremoniously. More particularly do they need a restaurant where they can obtain palatable meals for reasonable prices, and where they can invite friends to breakfast, lunch or dine without making great inroads upon their purses.

Year by year the army of professional women increases. All of these women are more or less clever; few are blessed with fortunes. All feel the necessity of a club, but to start one is not feasible. What is less impossible and more natural is such an addition to the present system as will give women all they desire without depriving men of their inalienable right to smoke, drink and wear their heels higher than their heads.

A vivid imagination can picture a club, consisting of two or more houses, with rooms exclusively for men, rooms exclusively for women, a general reading room and restaurant, private dining rooms and general reception rooms.

IT IS COMING.

Men who hate women and women who hate men need never encounter one another, while men and women who believe that two halves make a whole could exceed the Century club of New York in the brilliancy of their Saturday nights. Society is becoming more and more complex, and today there is far less chance of clever men and women meeting in big American towns than there is in London, because people in this country rarely have leisure.

Unless they give themselves up to dinner parties—never knowing beside whom they are to sit, and generally longing to be at the other end of the table—they are frequently doomed to go through an entire season without an interchange of ideas with their best friends.

Suppose all this changed. Suppose women know that on a given night in the week they are almost certain to encounter not one but many male friends, who are things of beauty and joys forever; suppose men know that on this same evening they are sure of seeing many women who are never at home when they find time to call; how simplified society becomes! And where is the unwomanliness of this proposal?

In the club of the future only such persons will be admitted as are in the habit of behaving like ladies and gentlemen. I fail to perceive why men and women of acknowledged position and intelligence, who conduct themselves properly in drawing rooms and public balls, should become transformed by occasional contact at clubs.

In all probability the club of the future will not be born during the reign of the present generation, but that society will eventually resort to some such device as I have suggested is as certain as that lunches and 5 o'clock teas are death to digestion and impossible for workers.—Kate Field's Washington.

A Soldier in Time of Peace.

One of the many advertising schemes in New York is that of having a man dressed in a soldier's uniform march up and down on the top of a building in a part of the city crowded with women who are out shopping. He apparently has not the slightest objection to making a ludicrous exhibition of himself, and he is ridiculous, for more than half the people who stop to look at him burst into laughing at the sorry figure he cuts. The helmet, the belt, the military trousers, the blouse, the musket and the bayonet at his side are all there, but they do not seem to fit. They were probably cut for a real soldier. At any rate, the man must serve his purpose, for people do stop to look at him, but, as a little girl said after staring at him with round blue eyes, "He ain't half so funny as my brother's painted soldiers."—New York Tribune.

AFTER THE BATTLE.

Wide o'er the field dread horrors brood;
The wounded thick are lying;
The earth drinks up a purple flood
That gurgles from the dying.
How changed from morning's bright array
Of martial pride and glory!
The pomp of war has passed away
And left its laurels gory.

The prancing steeds, the trumpet's blare,
The charge and sabers' clashing
No longer charm with honor's glare,
Nor cannon's roar and flashing.
The eyes have lost their fiery glow,
The voice its clarion pealing;
The flying pulse is beating slow,
The heart almost congealing.

Aceldama! oh, fitting name
To mark the sanguine story;
And yet 'twill give to endless fame,
And crown the dead with glory.
These heroes met the sweeping tide,
And, with supreme endeavor,
They victory won, though thousands died,
But Freedom lives forever!

It was a quick and deadly fight
That sent the foemen flying,
Arousing cheers of wild delight
From lips grown pale in dying.
Another charge must now be made,
The turf in furrows heaping,
When every mound that specks the glade
Will mark a hero's sleeping.

Aye, bury them with tender care—
Brave heroes! how we love them!
Where generations may repair,
To deck the turf above them.
While history shall their deeds repeat,
Song hold their fame in keeping,
Our love shall keep their memory sweet,
And guard their hallowed sleeping.
—Rev. Sidney Dyer in New York Ledger

He Got Enough to Eat.

In one of the leading hotels a few days ago one of those blustering, independent farmers was the star figure in a very amusing incident. He came in and sat down at a table where I was breakfasting and began studying the bill of fare. The printed list of eatables confused him not a little, but he made a bold bluff at the waiter and then leaned back in his chair satisfied that he would soon have a good breakfast. But he drew a blank. He had made a bad choice from the bill of fare and did not get enough to keep a squirrel from starving. He put it out of sight in a jiffy. He was still hungry and began to figure on some way to get another deal. He examined the card for a few moments and then began trying to catch a waiter. But they all were busy and did not notice the famished tiller of the soil.

He tapped with his knife on his plate, called "hey, there!" and tried to pluck their sleeves. It was no go, and his efforts remained unheeded. Finally, driven to desperation, he put his two thumbs in his mouth and whistled. Such a whistle, too! It could have been heard a mile. The waiters jumped as though they had been shot, and two nervous ladies screamed a little. The solemn head waiter and two or three of his nimble assistants ran to the old man, who calmly said: "I wish you would pass the victuals again. I didn't get enough." He soon had enough around him, and the head waiter kept an eye on him to see that the supply remained good.—Exchange.

A Fine Tree.

The grandest sycamore tree in New England, perhaps, is at Newton, in Connecticut. It is 85 feet high, 21 feet in circumference and the crown casts a shade 100 feet in diameter. The foliage is so dense it is impossible to discern a ray of light falling through it, and twilight reigns all the summer beneath it. The leaves are 5 inches long, about 4 inches wide and are of a beautiful glossy hue. When the wind rustles the leaves the sound they make is like that of falling rain. The blossoms are large and like silk floss, and falling cover the ground inches deep with an elastic robe that is like a wonderful snow white silken carpet. The giant tree is a landmark in all the region, and is visible to a person on the hilltops miles away, a vast dark pillar overtopping all other trees.—Cor. New York Sun.

Victoria Assumes Authority.

One of the first things Queen Victoria did on hearing that William IV was dead and that she had succeeded to the throne was to call one of her mother's ladies in waiting.

"Am I really queen?" asked the excited princess.

"You are, indeed, madam," replied the lady in waiting.

"And I can do what I choose by right?" continued Victoria.

"Certainly, your majesty."

"Then give me a cup of green tea; mamma would never let me have it; now I mean to know what harm it can do me."

And the young queen drank three cups, had a violent fit of the shivers and has never liked tea since.—London Tit-Bits.

Reckoning Without His Host.

At a Far Rockaway Hotel.—Fastidious Traveler—What can I have for dinner, waiter?

Irish Waiter—Ye can orther fwhat ye plaze, sor.

F. T.—Oh, then I'll have some consomme soup, a bit of salmon, a little entree to follow, what joint you may have—hot, and I'll have some dessert, some cheese, and I'll have——

Irish Waiter—Will ye, now, bedad? Then ye'll just have eggs and bacon—what ye're used to.—Chatter.

Satisfied.

A squad of Tenth Maine volunteers, while out scouting at South Mountain, came across an old woman hiding in a log cabin. After the usual salutations one of the squad, named Spaulding, asked her, "Well, old lady, are you a secesh?" "No," was the answer. "Are you a Union?" "No." "What are you then?" "A Baptist, and always have been!" The scouting party was satisfied.—Lewiston Journal.

THE EGG INDUSTRY.

What the Hens do for Humanity.

"FRESH EGGS" ALL THE YEAR ROUND.

What Becomes of the Rotten Eggs.—Refrigerators.

Very few of those who visit their grocery and purchase their modest fifteen and twenty-five cents' worth have any idea of the vast quantity of eggs supplied to and by the United States of America. The eggs received in New York alone during 1887 amounted to 534,400 barrels of seventy dozens each, and 745,843 cases of thirty dozens each, or a grand total of 717,399,240 eggs in New York last year! How many of these were fresh?

Take a stroll down Washington street and see the merchants opening their barrels and cases. On the sidewalk, and even in the buildings, are women who have come to buy cracked eggs. Very few men engage in this business; the women are much shrewder, and with a covered wooden pail in hand they watch the cracked eggs being taken out. They buy them up and resell them to the bakers. No bad eggs can be palmed off on these women; the cracked egg must be completely broken and emptied before they accept it on their count. Many small stores also buy cracked eggs, and these are purchased in small quantities by boarding house keepers who delight in "home made pastry on the table."

But the rotten eggs? What becomes of them? In former years they were taken to the scows and dumped with the city refuse, but now they are the means of supporting a distinct line of business. They are gathered together by the members of an energetic commonwealth, who take them to New Jersey, put them in barrels and sell them to the manufacturers of Morocco leather. So necessary have they become for the leather process that the demand is frequently greater than the supply.

In the crowded state of this city it is almost a matter of impossibility for boarding house keepers to supply their patrons with "fresh eggs" all the year round. Unless persons can keep their own hens fresh eggs must, with them, be at a discount. The hen is a willful bird, subject to all the caprices of her sex, and so long as her nature prompts her to do most of her laying during the milder portion of the year so long will the necessities of the case require that a portion of her product shall be kept from the period of plenty to relieve the period of scarcity. This question of preserving eggs has excited attention for centuries, and millions of dollars have been lost in trying to attain perfection. The liming process was discovered a little more than 100 years ago, and an excellent method it is, but such eggs are easily detected, and while a prejudice exists against them they can seldom be foisted as fresh.

The later invention of refrigerating consists in holding eggs in proper packages in a cool temperature, so that they will not grow old too fast. The temperature is generally from 38 to 40 degs., in which they are often kept from three to six months. But these ice house eggs are usually found to be "risky." They come into the market early in the fall, just when trade is picking up and prices advancing. They work off rapidly at first, but the regular egg eater soon discovers that there is something wrong, and they are incontinently "dropped." The worst of this kind comes from Canada, where they are packed in oat hulls.—New York World.

Success at Last.

Success, that magic word! Who does not long to emblazon it upon his shield? Young Jack had gone home to the farm house for a visit, in all the bravery of his fashionable clothing and elaborate manners.

"Succeed? I guess I've succeeded!" he answered to an old neighbor.

"Done a little o' most everything, aint ye, Jack?" queried the neighbor.

"Yes, uncle. I begun low; begun with writing poetry for the magnzines."

"Ever make much by it?"

"Not a cent."

"Git much published?"

"Not a line."

"Left the business, then, I'll ventur'?"

"Left it to its own destruction. Went into trade. Had a position in a wholesale dry goods firm."

"An' that's what you made your money in, I'll be bound?"

"No, uncle, no! They turned me off because I couldn't tell cashmere from serge. But my star has come up, in spite of that."

"Riz, has it? Well, boy, what did you settle down into at last?"

"Uncle," said the prosperous young man with solemnity, "I simply found my niche. I gave my faculties full scope—and invented a patent boot blacking! And now I sell it, wholesale and retail. All that's necessary in this world is to find your niche!"—Youth's Companion.

A Roman Recipe for Bread.

If you want to taste wheat bread, such as the Romans used to chew upon about two centuries before Christ, here is Marcus Portius Cato's recipe: "Panem depsticium sic facito. Manus mortariumque bene lavato. Farinam in mortarium indito, aqua paulatim addito, subigitoque pulchre. Ubi bene subegeris, defingito, coquitoque sub testu." This may be a trifle obscure if you do not happen to "know Latin," but perhaps that bright school boy or school girl can "help you out." If not, this will have to do: "Make kneaded bread thus: Wash well your hands and trough. Put the meal into the trough, add water gradually, and knead it thoroughly. When you have kneaded it well, mold it and bake it under cover." There! Clip this out, hand it to the wife, and when the first mouthful of the result has safely passed through your esophagus, don't swear, but rather give thanks that you were allowed to enter this world as a Nineteenth century American instead of a poor yeastless Roman of Cato's time.—The Roller Mill.

Guard (New York elevated railroad)—The doctor says I'm gitting dyspepsia.

Superintendent (kindly)—I'm sorry to hear that. What causes it?

"Why, sir, under the rules I've got ter take my meals while on duty on the train, and the doctor says eatin' so fast will kill me."

"I see. You have to swallow your meals at the rate of twenty miles an hour. Well, I'll order the engineers to reduce the speed to nineteen miles an hour at meal time."—Good News.

THE YOUNG PEOPLE.

A Young Man Who Succeeded in Lifting the Family Curtain.

Why cannot the parent in preparing l'enfant terrible for expected guests be wise to warn against the actual snares that lie in wait? For example, a friend told us this week of a recent visit she had made where her hostess all too evidently "made company" of her. Seated at the breakfast table the little terror piped out, "Two kinds of meat on the table! I never saw such a supper as that before." They tried yet again, and served poulet for the midday meal. Again l'enfant terrible, "That was my chicken they killed. Poor chickie! That was my chickie, Miss ——." Miss —— would gladly have spared the poor victim after this appetizing remark, but as there was at this session but one kind of meat on the table, the laws of politeness forbade, and she partook with the best possible grace of the pet of the poultry yard.—Boston Commonwealth.

Moods and Tenses.

Two little twins, Louisa and Julia by name, illustrate in their queer speeches the hard work which children have in mastering the parts of speech:

One day their mother missed Louisa, and as Julia had just been out at a neighbor's, she fancied that perhaps Louisa had been with her.

"Julia," she asked, "did Louisa go out with you?"

"No, mamma," said the little girl, "she didn't been; I saw she at the window when I was a wentin'!"—Youth's Companion.

The Probabilities.

Teacher—So you can't do a simple sum in arithmetic? Now, let me explain it to you. Suppose eight of you have together forty-eight apples, thirty-two peaches and sixteen melons, what would each one of you get? "Cholera morbus," replied Johnny.—Rare Bits.

His Ambition.

"Willie," said the good pastor, who was taking dinner with the family, "I suppose you will be a literary man, like your father, when you grow up."

"Nope," said the little boy addressed, as he looked at the somewhat meagre array of delicacies on the table with lofty scorn, "literary nuthin'! I'm goin' to be a $10,000 cook!"—Chicago Tribune.

The Show Could Now Begin.

What funny things a man in the box office sees. The other day I was in the treasury department of a theatre for a while. It was a matinee day. Among the people in line was a chap whose makeup indicated that he was in the city to see the sights.

"I would like to have one of your best seats," he said, as he looked in at the window just as a chicken in a coop looks out at a grain of corn which it can't reach.

"Dollar and a half," was the reply.

"Got any cheaper?"

"Oh, yes; got 'em for $1, seventy-five, fifty and twenty-five cents."

"Gimme a fifty cent ticket."

"All right; there you are."

"Has the show begun yet?"

"Not yet."

"How long before it will begin?"

"Just as soon as you get seated," said the treasurer, in a way that was matter of fact. "We have been waiting for you."

"Hey?" said the countryman.

"I say we have been waiting for you. I was afraid you wouldn't come. Please step in so as not to keep the company waiting."

The countryman looked at the treasurer for a half minute, and then asked:

"How did you know I was comin'?"—Chicago Mail.

A Definite Answer.

One of his colleagues in the senate said to Mr. Palmer, of Michigan, the other day:

"Palmer, I suppose that between legitimate lumbering, lumber stealing and fires, the timber is getting pretty scarce in Michigan."

For a moment Mr. Palmer looked at his friend pityingly and then replied:

"Just to think what a common school system we have and, with it all, a United States senator to ask such a question! Why, my dear sir, there is timber enough now standing in the state of Michigan to make three board fences, posts and all, fifteen boards high, clear around the earth once a year for fifteen years."

That removed the questioner's doubts—at least in Mr. Palmer's opinion, I suppose.—Chicago Herald.

An Appropriate Motto.

Mr. Mould (in book store)—I want you to get me up an appropriate motto to hang in my undertaking establishment.

Dealer—How would "Honesty the best policy" do?

Mr. Mould—That's too much of a chestnut.

Dealer (contemplatively)—H'm, how does "Is life worth living?" strike you?

Mr. Mould—Good, that's just the thing!—New York Sun.

Mr Whitman's Nemesis Aroused at Last.

An exchange has printed a poem "after Walt Whitman." It is time some one got after Walt.—Pittsburg Chronicle.

Nature Comes to the Rescue.

The recent discovery of an ink lake in Colorado is considered timely in view of the coming campaign.—Chicago Inter Ocean.

Strange.

The barber's is a strange profession. You seldom see one that is not at the head.—Yonkers Statesman.

A Classical Course.

He—And so you are really attending a cooking school, Miss Clara?

She (brightly)—Yes, and it is such fun.

He—I suppose you can make nice bread, already?

She—No, I have nothing to do with making bread; but I can make lovely angel cake. I am only taking the classical course.—New York Sun.

WALL STREET LUCK.

Broker's Signs of Good or Bad Fortune.

WALL ST. A HOTBED OF SUPERSTITION.

How Hunchbacks Affect the Market.—Number 13.

While eating lunch the other day with a prominent broker, I chanced to ask him about the stock market. Before the question was out of my mouth his hand went under the table like a flash and three ominous raps greeted my inquiry

"Spirits?" said I, distrustfully eyeing him.

"Luck," he answered, sipping his coffee. "I rapped for luck, as every sensible man should when the market is referred to in a restaurant."

Outside the circle of Spiritualists hundreds of prominent persons are superstitious We consider ourselves at the meridian of civilization, but, as Emerson says, we are only at the cock crowing and the morning star. Hundreds of people consult swindlers who call themselves astrologers A large proportion of the population here believe in signs indicative of good luck or ill luck, or else they believe that certain persons are favored with good look, while others are naturally unlucky The Rothschilds will have nothing to do with a man whom they consider unlucky. Commodore Vanderbilt, one of the ablest railroad financiers this country ever produced, believed in luck.

BAD LUCK ON FRIDAY.

Hundreds of intelligent persons have a superstitious reluctance to engage in any important enterprise on Friday This includes as cool and matter of fact a man as Jay Gould. Under no circumstances will he use an elevator The late Jesse Hoyt, the millionaire grain merchant, would never engage in any important business undertaking on Friday, and many of the speculators on the big exchanges are similarly superstitious. They consider every Friday a Black Friday The prejudice against Friday probably dates back to the Middle Ages, or to even a remoter period, as the day on which Christ was executed. It is only one of innumerable old superstitions which still survive.

Many investors and speculators in Wall street are superstitious about dropping things If they find themselves constantly dropping articles which they happen to be carrying they take it as a sign that they must sell their bonds and stocks. Many have a superstitious fear of holding stocks over a holiday.

Some firms will not display the ominous 13 if it happens to be the number of their places of business.

"I confess," said the manager of a large banking and brokerage house, "that I have a superstition about the 13th day of the month It is not generally a lucky day One unlucky instance I remember, too, about Friday A big lake steamer that plied between Buffalo and Chicago a number of years ago was launched on Friday, sailed on Friday and sank on Friday."

Some stock brokers think it is very good luck to see a hunchback. If they can touch the deformity it will bring big gains Such a touch is also supposed to cure headaches To see a negro the first thing in the morning is a favorable sign.

In the play "Henrietta" a youth who speculates in stocks when asked by his broker whether he wishes to buy or sell answers gravely, "I will consider it." Then he turns his back and tosses a cent to determine his course. This is really founded partly on fact A person in the habit of speculating in stocks found he was losing steadily At length he hit upon the idea of tossing a half dollar which he always carried for luck, and if it proved to be "head" he bought the first stock that came out on the tape; if it was "tail" he sold For a time at least he was far more successful by this method than he had ever been through the exercise of common sense.

THE WRONG FOOT FOREMOST.

Some persons on rising in the morning have a superstitious fear of putting the left foot out of bed first. Others believe in always putting on the left shoe first. If they meet a negro or a cross eyed woman they spit for good luck. Everybody wants to pick up a horseshoe.

On the Cotton Exchange there is one prominent member who consults the "spirits" for points on the market. On a dark day, when the gas is lighted, some of the brokers consider it a sign that the market will advance. Others say it is good luck to meet a Sister of Charity.

"I shouldn't care," said a popular oil operator, "to be long of 13,000 barrels of oil here and short that much in Oil City I would make it 14,000 at all hazards. Of course it is all nonsense, but I should feel better to change the figures at once. Then I have an unlucky suit of clothes. It may sound laughable, but it is so. I have a fine gray suit at home which I have only worn four or five times in the last three years, and it has already cost me ten times what I gave for it I borrowed a diamond ring from a friend and thought it might give me luck. It was just the reverse As sure as I wear that diamond ring the market breaks. Another thing, I never trade on Friday if I have seen that day a cross eyed woman or a red headed man."

One of the best known traders in the oil ring of the Consolidated Exchange will never cross a street diagonally, but always at right angles Between Wall street and Exchange place on narrow New street, on which both Stock Exchanges abut, the brokers walk in the middle of the street about as much as they do on the sidewalks; but the oil operator referred to always keeps carefully to the sidewalks, and if he has occasion to cross at the intersection of another street altakes in each corner on the way rather than cut across cata-cornered. He has a German coin that he could not be induced to sell. It gives good luck.

Hundreds of brokers on the two Stock Exchanges consider that they have their lucky suits of clothes

On the Consolidated Exchange, especially in the shouting, gesticulating, pushing and rollicking oil group, it is considered a very bad omen to open an umbrella and raise it over the head. Putting up an umbrella in a board room would seem under all circumstances to be unnecessary. It is worse It brings bad luck. There is a skeptical wag in the crowd, however, who on dull days, when the brokers are skylarking, will raise an umbrella and run into the trading ring and hold it over as many traders as he can. They scamper like a flock of frightened sheep.—New York Cor. Globe Democrat.

Dr. Smiles says: "I never studied the art of composition. I read a multitude of the best books, and from that I learned to compose."

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY MARCH 13..... 1891.

The result of at least one action of the late Congress has become very apparent. The passage of the McKinley bill is universally condemned. McKinley himself failed to be returned in his own district, and Democratic gains in last fall's Congressional elections was phenomenal. The entire fight of both parties was made upon the McKinley bill. The farmers throughout the United States have become alive to the situation and declare in a tone not to be mistaken that they will be no longer robbed by protection. Secretary of State Blaine, by far the ablest leader of the Republican party, declared at the time that the passage of the McKinley bill was a grave mistake and would bring about the downfall of the Republican party. The result verifies his wisdom. Mr. Blaine, in his advocacy of the reciprocity doctrine is defacto a free trader, and represents a large portion of his party. For thirty years the farmer has been robbed for the benefit of the manufacturer, and Hayseed says, "It don't go no more."

The cry of the press all over the State against "boodle" being used in the election of a Senator to succeed the late George Hearst is a standing shame and disgrace to the State that there should be cause. Even the expressed suspicion that the rights of the people of a great commonwealth might be bartered for gold is a death knell to free institutions. Great wealth is the same power to oppress the poor in the hands of its possessors as was maintained by the barons of old by means of mailed men and armed knights. What a travesty of the great principle of our nation—that all men are free and equal—is being made by the plutocrats of America. Leland Stanford is just as much the "Duke of California" as though he possessed the title In the English parliament a member of the House of Lords is born to his position. The Senators of the United States, though not born to the purple now, hold their places just as securely by means of their great wealth, and their sons will just as surely succeed them. Mr. Stanford's term of office expired at the end of the 51st Congress, but there was never any question but that he would succeed himself. His great wealth distributed among his retainers secures a life long lease of his place in the House of Lords of the United States. And what is true of Mr. Stanford is true of very near all of his colleagues. The steady accumulation of wealth and power in the hands of the few at the expense of the many is directly opposed to the great principles for which our forefathers fought. And unless the great democracy—the people of America—assume control of Government, the steady increase of vast fortunes in the hands of the few, brought about wholly and solely by fraud and corruption in Legislation, will wring from them the wail of anguish that is sent up by every downtrodden monarchical power of Europe to-day.

Congress adjourned on the 4th inst. without further legislation on silver. There is no denying that bimetallists were sanguine of passing a free coinage bill up to the time when ex President Cleveland wrote his short but pointed letter taking grounds against unlimited free coinage by this country. With the ex-President's stand against unlimited coinage of silver, under the belief that the time is not yet ripe for such a measure, leading bimetallists evidently did not make much of an effort to promote further legislation by this Congress, knowing that the next Congress is strongly Democratic and pledged to free coinage, and if President Harrison vetoes a free coinage bill they will have a sufficient majority in both houses to pass the bill over his head. Indeed, several leading bimetallist papers in the East were outspoken in advising that legislation be not forced this session, claiming that with the Grange, Farmers' Alliance and Knights of Labor working in harmony to secure the free coinage of silver large numbers will be proselyted, which will bring about the early consummation of their efforts in that direction.

Events within the last two months have, outside of Congressional legislation, put an entirely different phase on the silver situation. The present output of the mines in this country is claimed by well informed parties to be not more than, if as much as, the Government's monthly purchases, and with our product being cared for by the Government, foreign buyers will soon absorb the available surplus of the world, besides taking the output o the other silver producing countries. Already free buying by India, China and Japan is setting in, while two other nations are quietly securing round parcels. It is said in well informed financial circles that foreign purchases will be unusually heavy this spring and in consequence prices will steadily advance.

In San Francisco, for the first time since last May, foreign buyers are in the market for silver bullion. India and China have agents there securing all they can at reasonable figures—even paying an advance over the Mint quotations. It is also said that there is a speculative inquiry for silver comfrom parties who believe in much higher prices.

A TORPEDO ATTACK AT NIGHT.

A Vivid Picture of "David" and "Goliath" in Modern Naval Warfare.

The opportunity comes—a dark night and tempestuous. The clouds have covered the stars like a pall, and there is a howling wind which drowns all other sounds. The pigmy vessel makes ready and puts to sea. It rushes along as swift as the wind and as silent as a calm. Big waves sometimes sweep over it from end to end as it plunges through the darkness, but they are not heeded. Small as it is, it is stanchly built and can stand the strain of storm as well as its adversary. All men save one are snugly shut inside, tending the flying engine and preparing the missile of destruction. This is a strange bolt, shaped like a cigar, over ten feet in length, and the crew place it in the bow tube. The man on deck stands behind a little iron tower which shields him from the shock of the waves, and there he steers the boat.

In the darkness they seek their adversary determinedly, and with deadly purpose, since they are the protectors of their native land. The boat searches for a time in vain, for the big ship has covered all lights and is lying like a sleeping monster upon the waves, awaiting morning to renew the havoc. Perhaps if the ship remained thus the little boat would never find her; but "Goliath" becomes uneasy: he fears "David" will make an attack, so he has determined to watch.

A dazzling cone of white light suddenly starts from a point in the darkness and broadens upon the water. Slowly it sweeps about over the sea in circling arcs. All at once the little boat is bathed in a brilliant, blinding glare. The monster's eye finds it! But in finding the enemy the battle ship has disclosed itself, and the dauntless little adversary steams straight forward at utmost speed. Streaks of flame are now shooting from under the white light, while the rattling reports of rifles and machine guns rise sharply above the wind's roar. Shot and small shell are falling about like hail upon the water, but the monster cannot keep the range of the onrushing boat, and the missiles fly wide of the mark.

Suddenly the great ship looms up—tall, long, shadowy, overpowering. It is not far off—almost near enough to be attacked. Yet a little closer, and the intrepid pigmy, still unharmed, slows and steadies, with that ominous black tube pointing toward the monster's blazing side. Shots are falling upon the boat, and the man who was steering has taken refuge in his iron tower; but inside there is a wheel, and he can steer as well as before, for around him on a level with his eyes are little slits through which he can see. Now seconds are precious if the brave little craft is to escape destruction. The moment has come! A lever is pulled, and from that black tube comes a short, hoarse roar. At once the little boat begins to turn, ready to escape with the speed of the wind.

But before the boat can turn a dull, heavy shock has jarred the sea. A gigantic column of white water rushes upward toward the black clouds. In it the tall masts of the monster ship seem to sway about and clash together. The banging of the guns is sharply succeeded by cries of human terror.

The mass of water falls back into the sea with a roaring crash and scatters over the waves in great wisps of glistening foam. The wind, sweeping on again, forms new waves over the disturbed water. The monster ship has disappeared—the Goliath of the deep is conquered by his pigmy antagonist.—John M. Ellicott in St. Nicholas.

No Fitting Necessary.

Women who find it difficult to spare the time and strength at the dressmaker's for the fitting and trying on of two or three gowns a season comment sometimes upon the trouble their more fashionable sisters must take who own dresses by scores. In point of fact the latter have an easier time getting twenty than the former three.

Most wealthy and dressy women have at their dressmaker's a gown form of themselves, which is a plaster of paris cast taken from life. Every detail of the corseted and bodiced figure to the waist line is accurately reproduced, and this half body is then mounted upon a skirt form of the same height as the customer.

Madame or mademoiselle, as the case may be, then spends a single morning with her dressmaker choosing fabrics, studying effects, indicating occasions for which gowns will be needed and the like to accomplish the season's wardrobe. The costumes are made up and fitted to her counterfeit presentment and when finished sent home, often not needing the alteration of a single hook or loop.—New York Times.

Tapioca.

The manioc or cassava is a native of South America, but it has been successfully introduced for cultivation into Africa and other tropical countries. It is a bushy shrub, six to ten feet high, with large leaves near the ends of the branches. The articles prepared for commerce come from the roots or tubers, which are large and like turnips, but frequently weighing as high as thirty pounds. They contain a milky juice rich in starch, but also rich in hydrocyanic acid, which makes the juice—in its natural state—a very deadly poison.

The acid is driven out by heat and the remainder of the juice is extracted by boiling. The grated root makes what is known in the tropics as cassava or cassava bread, and is used for food. The starch, extracted, is exported as Brazilian arrowroot, and tapioca is made from it by a heating process which bursts the starch granules and causes some chemical changes.—Good Housekeeping.

EXPERT PICKPOCKETS.

LONDON SEEMS TO BE THE TRAINING SCHOOL FOR THEM.

There Are 100,000 in the Big City—Paris Has a Pretty Large Crowd of Them Also—They Belong to Clubs and Have Savings Banks of Their Own.

About a century ago Paris had only about fifty pickpockets, now the police reports show that their number has reached four thousand in the metropolis alone, and about ten thousand in the rest of France. These figures are nearly doubled at times of reviews, races, popular fetes, and exhibitions by recruits from abroad. But, singularly enough, they all come or have been trained in Great Britain. England is the cradle and hotbed of pickpockets. It is a profession as firmly established as carpentering or bricklaying; it has its apprentices, graduates, professors, experts, and commercial agents. Novices are taught to distinguish a Frenchman from a native, a Russian from a German, a South American from an Italian; they are made acquainted with the slight but all important differences in each nationality in the cut of the clothes, the place of the pockets, the mode of carrying jewelry, watches, purses, or loose cash.

When the pupils are supposed to have profited sufficiently by their education, they are dispatched at Christmas time to a certain suburb of London, where they are farmed out. The agent, who has come to select a trio, puts them through their paces, and if they acquit themselves creditably he engages them, gives them clothes, board and special instructions, and takes them abroad to ply their trade under his management. As soon, however, as their personality has become inconveniently familiar to the police of the locality, they are returned and exchanged for a fresh set, under the same conditions.

The community numbers 100,000 in London, including women and children: their headquarters are in the obscure purlieus of St. Giles, Whitechapel, the Minories and the low lying wharves of the Thames. It is there that they hold their meetings, organize their detachments, deliberate on future movements, have their savings banks and clubs, and settle on the way of assisting those of their pals who are ill, shadowed or in prison. They form a regular association, like the housebreakers and shoplifters, from whom, however, they are quite distinct.

AT WORK IN PARIS.

During their visits in Paris, although operating in common, they do not dwell together, but are scattered all over the city, meeting only to share the spoils at certain specified moments, in dark or borgne taverns and wine shops situated in the neighborhood of the Champs Elysees and the Grand Opera. The foreign, as well as the French, operators have their receiving houses, called in Paris meuniers (millers), where they dispose of their gleanings, and it is a remarkable feature of these transactions that they are carried on on both sides with scrupulous fairness and honesty.

A sharp and observant person might detect the pickpocket who shadows him with evil intent by the peculiar roving restlessness of the eye, of which even the most experienced ones cannot entirely divest themselves. The habit is contracted at the onset of their careers; imperative then, it becomes inveterate. The pickpocket embraces at a glance the particular article in a shop window calculated to attract the passerby, the conformation of the victim's pockets, the foot passengers around him and the quarter from which his bugbear, the "Bobby," is likely to appear. The English pickpocket rarely offers any opposition if caught in the act; he submits silently to be led off by his captor; only the women howl, thrash, sob, scratch and fight. It is the characteristic national coolness and lack of emotional irritability that contribute more than any physical aptitude to make the British pickpocket facile princeps in his art, and an object of envy and admiration to members of the professions in other countries.

THE FRENCH WAY.

In each country the profession retains its own particular methods. The Spaniard, like the South American, does not attempt to operate save in a tolerably thick crowd; the Italian works generally only on ladies, and badly, because he is too precipitate; the Turk is fearless, awkward, audacious, and even in the clutches of the police, with one hand pinioned, attempts to steal with the other. The French make a specialty of "recognition," which is effected by one pal affecting to recognize in some innocent, rustic looking individual a relation or old friend, effusively falling on his or her neck; while the error is explained and apologies offered the deed is done by an associate. The most dangerous of that species is the becoteuse, usually a young and very pretty girl, who rushes into the arms of a benevolent old man, kisses him on both cheeks and calls him "uncle," a relationship he will have good cause to remember, as it has cost him all his portable property.

The utter carelessness of the public facilitates the operations of the pickpockets to a degree which has often elicited from them expressions of withering contempt. To supplement the legend which bids people beware of them, the authorities would do well to affix a few simple rules, the observance of which would be an effective protection.—London Cor. New York Sun.

Increase in Imports.

The customs import lists show that import duty was paid on about $120,000,000 worth of cut diamonds in the last twenty-four years, of which $90,000,000 worth were imported during the last twelve years. In 1863 $1,000,000 worth were imported, and about $1,200,000 worth in 1867, but about $11,000,000 in 1888 and the same amount in 1889, or ten times as many in the latter year as twenty years previous.—Exchange.

An Open Question.

Teddy—Mamma, don't Quakers take off their hats?

Mamma—No, my dear; their belief is such that they will not uncover their heads.

Teddy—Then how do they get their hair cut?—Pittsburg Bulletin.

The czarowitch, the eldest son of the czar, who is to make an American tour, is a handsome young man of 23. He has a tall figure, a powerful physique and is a colonel in the Imperial guard. He is said to show considerable talent for the military profession.

Caring for the Pennies.

The Detroit Savings bank has adopted a plan which is novel in this country, but is in use in the postal savings system in Europe, for gathering little savings and bringing the advantage of the bank within easy reach of everybody. Agencies are selected in various parts of the city, such as drug stores, groceries and other reputable places, where adhesive labels of different denominations and colors, resembling postage stamps, will be sold.

Cards corresponding in color with the labels will be furnished, upon which the depositor will affix the labels as they are purchased until the twenty spaces on the cards are filled. For instance, suppose that a depositor determines to save five cents per week. He is furnished with a card corresponding in color with the five cent labels.

He purchases the label weekly at the nearest agency, and affixes it to the card. When the card is full it is worth $1, and is then sent to a savings bank for deposit, when the amount is entered upon the usual deposit book. Labels will be for various convenient denominations, making the cards when filled even amounts, as $1, $2, $5, and so on.

It is expected that the agents will do the work as a labor of love and public benefit, though small commissions may be paid. This system brings the savings bank to the people who need it most. We have five-cent savings banks now, but comparatively few people will take the trouble to go to the bank to deposit a few cents. It will be a very easy matter, however, to go to the nearest drug store or grocery and purchase the label, and the method involves no risk, except that of keeping the deposit card safe until it is filled.—Springfield Union.

A Scotchman's Perspicuity.

"Commend me to a Scotchman for the personification of perspicuity," observed Newton McMillan, the journalist, while relating at the Leland hotel some of the incidents of the Spalding baseball tour of the world, in which he was a participant. "I am aware that such an element is not usually credited to the Scotch character, but when I shall have finished you will see that the failure to do so is a mistake.

"I was at the time of which I speak on an excursion not far from London. I have my veins full of good Scotch blood, my name is Scotch, and as I look not so very much unlike one it is not strange that I am occasionally taken for one. And Scotch I was supposed to be by most of my traveling companions on the day in question. I did not undeceive them until near the end of the journey, when a big, brawny son of the Highlands, whose rich brogue made his wearing kilts unnecessary to designate his nativity, laid his hand on my shoulder and said:

"Excuse me, but abr-r-ent you ahn American?"

"I have that honor," I replied, whereupon the Scotchman, who it seemed had overheard some of the conversation during the journey, wagged his head knowingly and smilingly said:

"I thocht I could forespy in ye ah bit o' the twang-g-g."—Chicago Post.

It Didn't Work.

A doctor on the north side played a neat little trick upon his wife. Ever since she first met him he has been bearded like the pard, and both whiskers and mustache have been regarded as no inconsiderable part of his professional outfit. The lady was returning from the country, and her lord was to meet her at the depot. He usually wears a Prince Albert black coat and a tall silk hat, as becometh the dignity of a medicine man. He changed all that upon the appointed day.

First he went and had his face clean shaved. He then purchased a straw hat with blue ribbon band, and hastened to array himself in a light suit, of which the coat was a short sack, buttoned up to the chin. He saw his wife looking out for him, and, keeping his head turned down, he approached the car and said in a disguised voice: "Can I be of any assistance, madam?"

The somewhat disconsolate lady thanked him and said she would be much obliged if he would call a carriage. When she had taken her seat he jumped in and sat beside her without saying a word. She gave him a long, piercing look, and then said calmly, "Why, you great idiot, you're almost naked."—Chicago Journal.

Some Noted Jews.

"There is a Jew!" said the Rev. Dr. Blank, as he sat in his study with a Jew hater, and pointed to a plaster cast of Michael Angelo's magnificent head of Moses. "And there is another Jew!" he added, as he pointed to a painting of the Veronica Christ. "And there are yet other Jews!" he continued, as he glanced around his walls at the pictures of the prophets, apostles and sages, from David and Jeremiah to Paul and Peter. "Yes, my Christian brother, these are Jews, and are they not men who have voiced the highest thought of the world for ages, whose teaching is the guide of our life today and who will lead mankind to the end of time?" The Jew hater had not taken full account of these things before hearing his pastor's impassioned words, which, however, set him a-thinking.—New York Sun.

The Memory of a Chinese.

"Talk about the power of a Chinaman to imitate," said an East Side groceryman; "I was in a Fifteenth street laundry the other day and the almond eyed celestial, whose quick motions somehow made you think of a knife, was busy with a paint brush. He was painting a sign reading 'Chinese Laundry,' and painting it as neatly as a professional sign painter. He could not read a word of English and had no copy before him, and when I asked him how he did it simply said, 'See him lots.'"—Kansas City Star.

A recent contract provides for street lighting in Paris on a novel plan. Power is distributed by the compressed air system to a great number of small motors, each of which supplies currents for a small number of lamps.

Mrs. Ketchum's Catch.

A striped bass weighing 24¼ pounds is on exhibition in the window of J. R. Fish's market on Second street. It was caught Monday by Mrs. Ketchum, a widow lady 72 years of age, who is a guest at Westport Harbor, and landed with the assistance of her grandson, a boy of 11 years.—Fall River News.

It is estimated that one horse power of electric energy will furnish ample heat for a street car without smoke or dust or reduction of seating capacity.

A DEAF MUTE COLLEGE.

DEGREES CONFERRED ON STUDENTS WHO CANNOT HEAR.

The Wonderful Progress in the Education of the Deaf and Dumb—The Curriculum of the National College at Washington. Some of the Work Done.

Very little is known about the ancient treatment of the deaf, but Aristotle is credited with saying somewhere in his musty works that the deaf are wholly incapable of receiving intellectual instruction. History tells us, however, that deafness was sometimes deemed a visitation of divine wrath, and that the poor victim was frequently destroyed to save the family honor, or was classed with the idiotic or insane and treated as an outcast. This opinion must have prevailed many centuries, for it was within the last 150 years that it was discovered that the deaf were capable of receiving intellectual instruction.

A college for deaf mutes was founded in the city of Washington about twenty-six years ago to combat the popular prejudice. The college grew and thrived. Few people know anything about the National Deaf Mute college, or the Columbian Institution for the Deaf and Dumb, as it is known officially, at Kendall Green, Washington. A man who, had he lived 1,000 years ago, might have been roasted because he could neither hear nor speak today studies moral philosophy, the calculus and ancient and modern languages, and graduates from a college with a degree.

THE COLLEGE.

The Columbia institution was incorporated in 1857, and has since then been sustained by congress as an institution where deaf mute children living in the District of Columbia and children of soldiers and sailors should receive free education. Ample provision is also made for deaf mutes from the states and territories, who have not the means of defraying the expenses of tuition, which amount to $250 a year. The institution continued for seven years as an ordinary high school, but in 1864 it was decided to organize a collegiate department, and congress passed an act authorizing the institution to confer collegiate degrees. The institution was then divided into two departments, the school and the National Deaf Mute college. In one of his annual reports Dr. Edward M. Gallaudet, the president of the college, says:

"The object of the directors in establishing a school of this grade, thus taking a step unprecedented in the history of deaf mute instruction, was in part to prove what had been doubted by some, that persons deprived of hearing and speech could, in spite of their disability, engage successfully in the advanced studies pursued in colleges for the hearing. The more important end in view, however, was to afford to a class of persons in the community, already numerous and increasing steadily with the population, an opportunity to secure the advantages of a rigid and thorough course of intellectual training in the higher walks of literature and the liberal arts."

The best evidence of the success of the movement can be found in this paragraph from the annual report of 1887, which tells what pursuits some of the graduates followed:

WHERE THE GRADUATES GO.

"Fifty who have gone out from the college have been engaged in teaching, one has entered the ministry, three have become editors and publishers of newspapers, three others have taken positions connected with journalism, ten have entered the civil service of the government, one while filling a position as instructor in a western institution has rendered important service to the coast survey as a microscopist, two have become accomplished draughtsmen in architects' offices, one has been repeatedly elected recorder of deeds in a southern city, and two others are recorders' clerks in the west.

"Another has been elected city treasurer and is at present cashier of a national bank, one has become eminent as a practical chemist and assayer, two have taken places in the faculty of their alma mater and are rendering valuable service as instructors, some have gone into mercantile and other offices, some have undertaken business on their own account, while not a few have chosen agricultural and mechanical pursuits in which the advantages of thorough mental training will give them a superiority over those not so well educated."

Congress has been liberal with the institution. In 1881 a fine gymnasium was completed, which cost $14,600. Most of the students in the college are graduates of the lower department of the institution, but not a few received their early education in separate local schools. The entire curriculum, including an introductory year, embraces a period of five years. Candidates for admission to the introductory class are examined in these subjects: The command of English as shown in oral or finger-spelled conversation; in rendering at sight paragraphs selected from school books and from newspapers; in extemporaneous English composition; arithmetic; history of the United States; history of England to the beginning of the reign of Henry VII; political geography; physical geography, and elements of natural philosophy.

The curriculum of the college is about the same as that of any other college. It includes mathematics, English, Latin, Greek, history, zoology, botany, chemistry, physics, physiology, French, German, logic, mental and moral science and political philosophy. The degrees which the college has conferred are: Bachelor of arts, bachelor of science, bachelor of philosophy, master of arts, master of science and doctor of philosophy.—New York Sun.

A Simple Plan.

Mr. Youngman (after long thought)—Is there any way to find out what a woman thinks of you without proposing?

Mr. Benedick (absently)—Yes; make her mad.—Good News.

An Aged Sea Gull.

Dick is expected at Brenton's reef lightship for the winter. Dick is only an aged sea gull, but aboard the lightship he is part of the ship's company from October to April. This bird has passed its winters at the ship for eighteen years, and now, as usual at this season of the year, the crew are watching for his return, with some forebodings that perhaps he had died of old age. Dick is perfectly tame and much respected by his human friends aboard ship.—Fall River News.

ORDER FIXING TIME AND PLACE FOR HEARIN PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Charles D. Begole deceased.

IT APPEARING TO THE COURT, BY THE petition this day presented and filed by Thomas Parker, the Administrator of the Estate of Charles D. Begole, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the said Court that all persons interested in the estate of said deceased, appear before the said Superior Court on Tuesday, the 24th day of March, 1891, at ten o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administrator to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

GEO. M. GILL,
Judge of the Superior Court.

Dated February 18th, 1891.

[ENDORSED.]

SUPERIOR COURT, COUNTY OF INYO.

In the Matter of the Estate of Charles D. Begole, deceased.

Order Fixing time and place for hearing petition for sale of Personal Property and Real Estate.

Filed February 18th, 1891.

Religious Services.

On Sunday next in the M. E. Church at Independence the service of song entitled "Little Minnie, or the Story of a Sister's Love," will be rendered by the choir. The service to commence at 7 o'clock. The story is a very pretty and affecting one, founded upon an incident of the late war.

Farmers are busy getting in their crops.

George Gilliam is down from Big Pine.

Easter Sunday occurs on the 29th of March.

Five feet of snow fell at Bodie during the late storm.

Fruit trees are full of buds and rose bushes are in leaf.

Ben Lasky and Pete La Barge were up from Lone Pine last Sunday.

Miss Lena Thompson has returned from a visit with her brother in Colusa County.

The pre-emption and timber culture land laws were repealed by the late Congress.

Thirty-three carloads of beef cattle were shipped from Reno to San Francisco on Monday.

L. Wood keeps a fine assortment of general merchandise and farmers will always get a square deal.

Pat. Downs has been packing out ore from the White Hill during the week for shipment to Selby & Co.

The cattlemen wear a broad smile of satisfaction. The weather has turned off warm and feed is coming up everywhere.

Bishop is to have a trotting race on July 4th, free for all horses owned at that place and Round Valley. Entries close on Monday.

Mr. Harry Jiggens started for Maxwell, Colusa county, last Tuesday. He expects to go into the grain and commission business and will probably remain a considerable time.

The remains of Senator Hearstleft Washington for California on a special car last Saturday. The funeral ceremonies will take place at Trinity Church, San Francisco, on Sunday.

Now is a golden opportunity to secure the finest piece of land under the Eastside canal. For the quality of it intending purchasers are referred to Superintendent McIver and the *Index*. Only six dollars an acre.

The Los Angeles Citrus Fair began last Monday. The exhibit is by far the largest of the kind ever collected in the State. The affair has been largely advertised, and visitors are present from all over the United States.

News was received at Independence yesterday that Mr. George Watterson had been elected Supervisor at Bishop. Mr. Watterson served in that capacity in Mono County, giving him experience, and he will be a strong and useful member on the Board.

Just as we are going to press word is brought in of the death of Thomas Parker. He was confined to his bed for two weeks past. He was unable to rally and died at 12 o'clock to-day. The funeral ceremonies will take place at 1 p. m. on Sunday under the auspicies of the Masonic fraternity.

Last Sunday Mr. John Reddy, Miss Katie Reddy and Miss R. Kelley met with a serious accident at Darwin. They were out driving and were thrown from the buggy. The young ladies were severely shaken and bruised, and Reddy's arm was fractured at the wrist.

Frequently on picking up a newspaper a big heading will be seen "Rev. A. B. Blank caned," or "Hon. C. D. Dash caned." You read the article expecting something rich and racy, only to find that some old stiff is presented with a two dollar and six bit mahogany with a rolled gold tip. Don't do it. It's disappointing and saddening.

Don't forget that the 17th of Ireland will be celebrated at Keeler next Monday evening. A thoroughly good time is always enjoyed at the balls given by Mr. and Mrs. Barnes. A number of Independence people have signified their intention of going down and many others will be present from Lone Pine, Darwin and other places.

Bert Rhine has been appointed Fair Director in place of N. Rhine resigned. Great shades of Jerry Rusk! What he doesn't know about agriculture would fill all the reports that have ever been published. And yet it is a safe bet that he will endeavor to run things from the start. Bert will be quite willing to save the other directors any trouble in managing the Fair.

Never before in the history of Los Angeles were there so many visitors within her borders. The many hotels and lodging houses of the city are thronged, and those in the country are full. The means of accommodating visitors here are now very liberal and excellent, yet they are taxed to their utmost capacity. Such a throng of people prior to six years ago could not have been housed or fed.—*Herald.*

New Form of Money Order.

The Postoffice Department has recently issued a new form of money order which is a great improvement over the old one. Heretofore the payee required identification which to a stranger in a large city was a means of considerable annoyance; but by means of the new form the payer can waive the right of identification of the payee, and payment can therefore be made by any one presenting the order.

A New Eastern Outlet.

The San Francisco Chronicle says the California and Nevada narrow-gauge railroad, in Alameda County, has been sold to eastern capitalists, who will change the road to a standard gauge and extend it across Nevada to Pioche, and thence to Grand Junction on the Colorado Midland. The name of the road will be changed to California, Nevada and Santa Fe, and it is the intention to build the shortest and most direct line to Kansas City and Chicago. The line from West Bend to Colorado Springs is to be finished, still further shortening the distance to the east.

Food For Reflection.

One of the first principles of political economy is this: From the moment the balance of trade is against any country from that moment the country is getting poorer. This fact is obvious and needs no argument. Ever since the completion of the C. & C. road seven years ago the balance of trade has been decidedly against Inyo county. This is a fact which cannot be denied and the inference is therefore plain. In its last issue the *Index* says that Inyo county is paying from $120,000 to $180,000 a year to the railroad company for freight alone. The *Index* being the recognized official paper of the railroad company the statement may be taken as very nearly correct. Just think for a moment that the small population of Inyo county, less than 4,000 souls, is taxed annually the enormous sum of $180,000, for which they do not receive one dollar in return, and the burden of course falls upon the farmer. In the face of this showing the farmer is politely invited to "quit growling and do something," by the railroad company through the *Index*. In other words, to patiently bear the burden of $180,000 a year and expect no relief. Last year Inyo County paid out for freight and supplies at the lowest estimate, $455,000. The total income from all sources was not to exceed $375,000. At the end of last year Inyo county was poorer by the sum of $80,000. Where was the deficit in part made up? By mortgages on farm property. Last year mortgages to the amount of over $60,000 on farm property were recorded in the office of the Co. Recorder, and about half of it was outside capital. In four years mortgages have increased over one hundred per cent. And yet farmers are asked to shut their eyes and mortgage their little holdings until they have nothing left upon which they can raise a dollar. Last year the assessed valuation of property in the county was over $30,000 less than the year before. Does this look like prosperity? Business men complain of the scarcity of coin. Every sensible person can see the reason for it. Every available dollar that the merchant and farmer can control must go for freight. Like death and taxes, freight bills wait for no man; $180,000 in hard coin must be forthcoming annually. With freight teams running to Mojave two-third of this large sum would be left in the Valley, and instead of being $80,000 poorer we would have been $40,000 richer. Merchant and farmer alike have felt the growing scarcity of coin. The above facts are the true reason. Were there no possible remedy for this evil nothing would be said; we should be compelled to make the best of it. But with a railroad to Mojave vast quantitities of hay, potatoes and fruit would find a ready cash market. All our beef cattle could be sold the moment they are in condition to kill. In is a crying shame that a country so blest as Inyo in the matter of soil and climate should become the prey of a vast tape-worn feeding upon its vitals and exhausting its every energy. The only chance of prosperity we can hope for is a railroad to Mojave or a recourse to teaming. And every day adds greater weight to this fact.

Copp's Settler's Guide, Revised.

Henry N. Copp, the Washington (D. C.) land lawyer, has revised and reprinted his Settler's Guide, the seventeenth edition. In view of the recent confusing legislation of Congress, this book is an indispensable assistant for all who are, or expect to be, interested in public land. Settlers will save money by purchasing it, and all who expect to take up land in the future should get posted and save expensive mistakes. A chapter, illustrated with numerous cuts, shows how to tell township, section, and quarter-section corners and explains the system of surveys. It gives full information about the homestead, pre-emption, timber culture, desert land, and other laws. It will tell you who is entitled to enter land; how continuous your residence must be; what improvements you must make; what affidavits you must swear to; about contests and on what grounds they can be commenced; also suggestions about State lands, stone and timber lands, mineral lands, desert entries, saline, railroad, coal, townsite and other lands. Its purchase will save you money and trouble, as erroneous statements circulated by conversation among settlers may, if acted upon, cost you a contest, perhaps your land and improvements. The price of the book is 25 cents. Address the author.

Buying Steers.

L. J. Rose, Jr., has been in the Valley during the past week buying up steers. It is his intention to drive them to his ranch in Ventura and fatten them for market. It is reported that he is buying two and three year-old steers for from nine to fifteen dollars per head. If this is true there must be very little profit to the cattlemen. With a railroad to Mojave every steer in the Valley could be fattened here at home and shipped to market. Under the present conditions they must be driven several hundred miles and put in condition for market. By this means the producer loses his just profits, and the farmer loses the market for his hay. With a railroad to Mojave every beef animal in the Valley would find a ready market. They would be fattened right here at home, and the farmer would receive good prices for his hay.

The thermometer registered 15° below zero at Bridgeport last week.

OFFICIAL.

ALIAS SUMMONS.

MARY A. BALL, Plaintiff, vs. ROBERT BALL, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Robert Ball, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony now existing between the Plaintiff and Defendant and for costs of suit, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief therein demanded.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 28th day of February, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
P. H. MACK, Attorney for Plaintiff.

MISCELLANEOUS.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Sec 1 in 2,324, Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.
Dated Cerro Gordo, January 2, 1891.

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

NOTICE.

ALL PERSONS HAVING CLAIMS against the undersigned will present the same by the first of each month and payment will be made on the 5th.

FRANK FITZGERALD.
Supt. Modock Con. Mining Co., Modock Cal.

We'll write it down till everybody sees it

Till everybody is sick of seeing it

Till everybody knows it without seeing it—

that Dr. Sage's Catarrh Remedy cures the worst cases of chronic catarrh in the head, catarrhal headache, and "cold in the head."

In perfect faith, its makers, the World's Dispensary Medical Association of Buffalo, N. Y., offers to pay $500 to any one suffering from chronic catarrh in the head whom they cannot cure.

Now if the conditions were reversed—if they asked you to pay $500 for a positive cure you might hesitate. Here are reputable men, with years of honorable dealing; thousands of dollars and a great name back of them and they say—"We can cure you because we've cured thousands like you—if we can't we'll pay you $500 for the knowledge that there's one whom we can't cure."

They believe in themselves. Isn't it worth a trial? Isn't any trial preferable to catarrh?

Once to every man and nation
Comes the moment to decide
In the strife of truth and falsehood
For the good or evil side.

A COMMON SENSE REMEDY.

In the matter of curatives what you want is something that will do its work while you continue to do yours—a remedy that will give you no inconvenience nor interfere with your business. Such a remedy is ALLCOCK'S POROUS PLASTERS. These plasters are not an experiment, they have been in use for over thirty years, and their value has been attested by the highest medical authorities, as well as by voluntary testimonials from those who have used them.

ALLCOCK'S POROUS PLASTERS are purely vegetable and absolutely harmless. They require no change of diet and are not affected by wet or cold. Their action does not interfere with labor or business; you can toil and yet be cured while hard at work. They are so pure that the youngest, the oldest, the most delicate person of either sex can use them with great benefit.

Do not get up so many good ideas that you have no time to carry them into execution.

BEWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY,

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, and acts directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co.

Sold by Druggists, price 75c. per bottle.

The cats that drive away mice are as good as those that catch them.

There is *nothing* (unless it be the sewing machine) that has lightened woman's labor as much as Dobbins' Electric Soap, *constantly* sold since 1864. All grocers have it. Have *you* made its acquaintance? Try it.

Hypocrisy—If you don't pay your debts you had better not talk too much in class meeting.

For Throat Diseases and Coughs, "*Brown's Bronchial Troches*," like all other *really good* things, are imitated, and purchasers should be careful to obtain the genuine article prepared by JOHN I. BROWN & SONS.

A Definition—"Papa, what is a fad?" "A fad, my son, is somebody else's peculiarity."

INCREASED BUSINESS.

The PACIFIC BANK, of San Francisco, pursues the even tenor of its way, simply pointing to its $1,000,000 of paid up capital; its $800,000 of surplus fund, (showing a continued increase of surplus and growth of business, and payment of its regular dividends as large as ever, leaving business men to draw their own inferences.

DROPSY.

We call attention to those suffering with dropsy to the fair proposition of Dr. H. H. Green & Sons in their advertisement on this page. Try them; costs you nothing to do so.

Try Germea for Breakfast.

Positively Cured with Vegetable Remedies
Have cured thousands of cases. Cure cases pronounced hopeless by best physicians. From first dose symptoms disappear; in ten days at least two-thirds all symptoms removed. Send for free book testimonials of miraculous cures. Ten days' treatment free by mail. If you order trial, send 10c. in stamps or pay postage. DR. H. H. GREEN & SONS, Atlanta, Ga. If you order trial return this advertisement to us.

I CURE FITS!
When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. H. G. ROOT, M. C., 183 Pearl St. New York.

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

It made her heart heavy. For the first time in her brief life the Broodhuis seemed to frown between her and the sun.

Undisturbed, he painted on and did not look at her.

The day was nearly done. The people began to scatter. The shadows grew very long. He painted, not glancing once elsewhere than at his study. Bebee's baskets were quite empty.

She rose, and lingered, and regarded him wistfully, he was angered, perhaps she had been rude! Her little heart failed her.

If he would only look up!

But he did not look up, he kept his handsome dark face studiously over the canvas of the Broodhuis. She would have seen a smile in his eyes if he had lifted them, but he never raised his lids.

Bebee hesitated; take the stockings she would not; but perhaps she had refused him too roughly. She wished so that he would look up and save her speaking first, but he knew what he was about too warily and well to help her thus.

She waited awhile, then took one little red moss rose bud that she had saved all day in a corner of her basket, and held it out to him frankly, shyly, as a peace offering.

"Was I rude? I did not mean to be, but I cannot take the stockings, and why did you tell me that falsehood?"

He took the rose bud and rose too, and smiled, but he did not meet her eyes.

"Let us forget the whole matter; it is not worth a sou. If you do not take the box leave it; it is of no use to me."

"I cannot take it."

She knew she was doing right. How was it that he could make her feel as though she were acting wrongly?

"Leave it, then, I say. You are not the first woman, my dear, who has quarreled with a wish fulfilled. It is a way your sex has of rewarding gods and men. Here, you old witch—here is a treasure trove for you. You can sell it for ten francs in the town anywhere."

As he spoke he tossed the casket and the stockings in it to an old decrepit woman, who was passing by with a baker's cart drawn by a dog; and, not staying to heed her astonishment, gathered his colors and easel together.

The tears swam in Bebee's eyes as she saw the box whirled through the air.

She had done right—she was sure she had done right.

He was a stranger, and she could never have repaid him, but he made her feel herself wayward and ungrateful, and it was hard to see the beautiful fairy gift borne away forever by the chuckling, hobbling, greedy old baker's woman. If he had only taken it himself she would have been glad then to have been brave and to have done her duty.

But it was not in his design that she should be glad.

He saw her tears, but he seemed not to see them.

"Good night, Bebee," he said, carelessly, as he sauntered aside from her. "Good night, my dear. To-morrow I will finish my painting; but I will not offend you by any more gifts."

Bebee lifted her drooped head and looked him in the eyes eagerly, with a certain sturdy resolve and timid wistfulness intermingled in her look.

"Sir—see, you speak to me quite wrongly," she said with a quick accent, that had pride as well as pain in it. "Say it was kind to bring me what I wished for—yes, it was kind, I know; but you never saw me till last night, and I cannot tell even your name; and it is very wrong to lie to any one, even to a little thing like me; and I am only Bebee, and cannot give you anything back, because I have only just enough to feed myself and the starling, and not always that in winter. I thank you very much for what you wish to do; but if I had taken those things I think you would have thought me very mean, and full of greed; and Antoine always said, 'Do not take what you cannot pay—not ever what you cannot pay—that is the way to walk with pure feet.' Perhaps I spoke ill, because they spoil me and they say I am too swift to say my mind. But I am not thankless—not thankless, indeed—it is only I could not take what I cannot pay. That is all. You are angry still—not now—no?"

There was anxiety in the pleading. What did it matter to her what a stranger thought?

And yet Bebee's heart was heavy as he laughed a little coldly, and bade her good day, and left her alone to go out of the city homewards. A sense of having done wrong weighed on her; of having been rude and ungrateful.

She had no heart for the children that evening. Mere Krebs was sitting out before her door shelling peas, and called to her to come in and have a drop of coffee. Krebs had come in from Vilvoorde fair and brought a stock of rare good berries with him. But Bebee thanked her and went on to her own garden to work.

She had always liked to sit out on the quaint wooden steps of the mill and under the red shadow of the sails, watching the swallows flutter to and fro in the sunset and hearing the droll frogs croak in the rushes, while the old people told her tales of the time of how in their babyhood they had run out, fearful yet fascinated, to see the beautiful Scots Grays flash by in the murky night, and the endless line of guns and caissons crawl back as a snake through the summer dust and the trampled corn, going out past the woods to Waterloo.

But to-night she had no fancy for it; she wanted to be alone with the flowers.

Though, to be sure, they had been very heartless when Antoine's coffin had gone past them, still they had sympathy; the daisies smiled at her with their golden eyes and the roses dropped tears on her hand, just as her mood might be, the flowers were closer friends after all than any human souls, and besides she could say so much to them!

Flowers belong to fairy land; the flowers and the birds, and the butterflies, are all that the world has kept its golden Age; the only perfectly beautiful things on earth, joyous, innocent, half divine, useless, say they who are wiser than God.

Bebee went home and worked among her flowers.

A little laborious figure, with her petticoats twisted high, and her feet wet with the night dews, and her back bowed to the hoeing and clipping and raking among the blossoming plants.

"How late you are working to-night, Bebee!" one or two called out as they passed the gate. She looked up and smiled; but went on working while the white moon rose.

She did not know what ailed her.

She went to bed without supper, leaving her bit of bread and bowl of goat's milk to make a meal for the fowls in the morning.

"Little ugly, shameful, naked feet!" she said to them, sitting on the edge of her mattress, and looking at them in the moonlight. They were very pretty feet, and would not have been half so pretty in silk hose and satin shoes, but she did not know that; he had told her she wanted those vanities.

She sat still a long while, her rosy feet swaying to and fro like two roses that grow on one stalk and hang down in the wind. The little lattice was open; the sweet and dusky garden was beyond; there was a hand's breadth of sky, in which a single star was shining; the leaves of the vine hid all the rest.

But for once she saw none of it.

She only saw the black Broodhuis; the red and gold sunset overhead; the gray stones, with the fallen rose leaves and crushed fruits; and in the shadow two dark, reproachful eyes, that looked at hers.

Had she been ungrateful?

The little tender, honest heart of her was troubled and oppressed. For once that night she slept ill.

CHAPTER VI.

All the next day she sat under the yellow awning, but she sat alone.

It was market day, there were many strangers. Flowers were in demand. The copper pieces were ringing against one another all the hours through in her leathern bag. The cobbler was in such good humor that he forgot to quarrel with his wife. The fruit was in such plenty that they gave her a leaf full of white and red currants for her noonday dinner. And the people split their sides at the Cheap John's jokes, he was so droll. No one saw the leaks in his kettles or the hole in his bellows, or the leg that was lacking in his milking stool.

Everybody was gay and merry that day. But Bebee's blue eyes looked wistfully over the throng, and did not find what they sought. Somehow the day seemed dull, and the square empty.

When the day was done Bebee gave a quick sigh as she looked across the square. She had so wanted to tell him that she was not ungrateful, and she had a little moss rose ready, with a sprig of sweetbrier, and a tiny spray of maiden hair fern that grew under the willows, which she had kept covered up with a leaf of sycamore all the day long.

No one would have it now.

The child went out of the place sadly, as the carillon rang. There was only the moss rose in her basket, and the red and white currants that had been given her for her dinner.

She went along the twisting, many colored, quaintly fashioned streets, till she came to the water side.

Bebee was fond of watching the brigs and barges, that looked so big to her, with their national flags flying, and their tall masts standing thick as grass, and their tawny sails flapping in the wind, and about them the sweet, strong smell of that strange, unknown thing, the sea.

But this dull day Bebee did not go down upon the wharf; she did not want the sailors' tales, she saw the masts and bits of bunting that streamed from them, and they made her restless, which they had never done before.

Instead she went in at a dark old door and climbed up a steep staircase that went up and up, as though she were mounting St. Gudule's belfry towers, and at the top of it entered a little chamber in the roof, where one square unglazed hole that served for light looked out upon the canal, with all its crowded craft, from the dainty schooner yacht, fresh as gilding and holystone could make her, that was running for pleasure to the Scheldt, to the rude, clumsy coal barge, black as night, that bore the rough diamonds of Belgium to the snow buried roofs of Christiania and Stromstad.

In the little dark attic there was a very old woman in a red petticoat and a high cap, who sat against the window, and pricked out lace patterns with a pin on thick paper. She was 85 years old, and could hardly keep body and soul together.

Bebee, running to her, kissed her.

"Oh, mother Annemie, look here! Beautiful red and white currants, and a roll. I saved them for you. They are the first currants we have seen this year. Me! oh, for me, I have eaten more than are good! You know I pick fruit like a sparrow, always. Dear mother Annemie, are you better? Are you quite sure you are better today?"

The little old withered woman, brown as a walnut and meager as a rush, took the currants, and smiled with a childish glee, and began to eat them, blessing the child with each crumb she broke off the bread.

"Why had you not a grandmother of your own, my little one?" she mumbled. "How good you would have been to her, Bebee!"

"Yes," said Bebee, seriously, but her mind could not grasp the idea. It was easier for her to believe the fanciful fily parentage of Antoine's stories. "How much work have you done, Annemie? Oh, all that? All that! But there is enough for a week. You work too early and too late, you dear Annemie."

"Nay, Bebee, when one has to get one's bread that cannot be. But I am afraid my eyes are failing. That rose, now, is it well done?"

"Beautifully done. Would the Baes take take them if they were not? You know he is one that cuts every centime in four pieces."

"Ah! sharp enough, sharp enough—that is true. But I am always afraid of my eyes. I do not see the flags out there so well as I used to do."

"Because the sun is so bright, Annemie, that is all. I myself, when I have been sitting all day in the Place in the light, the flowers look pale to me. And you know it is not age with me, Annemie."

The old woman and the young girl laughed together at that droll idea.

"You have a merry heart, dear little one," said old Annemie. "The saints keep it to you always."

"May I tidy the room a little?"

"To be sure, dear, and thank you too. I have not much time, you see; and somehow my back aches badly when I stoop."

"And it is so damp here for you, over all that water!" said Bebee as she swept and dusted and set to rights the tiny place, and put in a little broken pot a few sprays of honeysuckle and rosemary that she had brought with her. "It is so damp here. You should have come and lived in my hut with me, Annemie, and sat out under the vine all day, and looked after the chickens for me when I was in the town. They are such mischievous little souls, as soon as my back is turned one or other is sure to push through the roof, and get out among the flowerbeds. Will you never change your mind, and live with me, Annemie? I am sure you would be happy, and the starling says your name quite plain, and to is such a funny bird to talk to, you never would tire of him. Will you never come? It is so bright there, and green and sweet smelling; and to think you never even have seen it!—and the swans and all—it is a shame."

"No dear," said old Annemie, eating her last bunch of currants. "You have said so so often, and you are good and mean it, that I know. But I could not leave the water. It would kill me. Out of this window, you know, I saw my Jeannot's brig go away—away—away—till the masts were lost in the mists. Going with iron to Norway; the Fleur d'Epine of this town, a good ship, and a sure, and her mate; and as proud as might be, and with a little blest Mary in lead round his throat. She was to be back in port in eight months, bringing timber. Eight months—that brought Easter time. But she never came. Never, never, never, you know. I sat here watching them come and go, and my child sickened and died, and the summer passed, and the autumn, and all the while I looked—looked—looked; for the brigs are all much alike, and only her I always saw as soon as she hove in sight (because he tied a hank of flax to her mizzen mast); and when he was home safe and sound I spun the hank into hose for him; that was a fancy of his, and for eleven voyages, one on another, he had never missed to tie the flax nor I to spin the hose. But the hank of flax I never saw this time, nor the brave brig; nor my good man with his sunny blue eyes. Only one day in winter, when the great blocks of ice were smashing hither and thither, a coaster came in and brought tidings of how off in the Danish waters they had come on a waterlogged brig, and her hull riven in two and her crew all drowned and dead beyond any manner of doubt. And on her stern there was her name painted white, the Fleur d'Epine, of Brussels, as plain as name could be, and that was all we ever knew; what evil had struck her, or how they had perished, nobody ever told. Only the coaster brought that bit of beam away, with the Fleur d'Epine writ clear upon it. But you see I never know my man is dead. Any day—who can say?—any one of those ships may bring him aboard of her, and he may leap out on the wharf there, and come running up the stairs as he used to do, and cry, in his merry voice, 'Annemie, Annemie, here is more flax to spin, here is more hose to weave!' For that was always his homeward word, no matter whether he had had fair weather or foul, he always knotted the flax to his masthead. So you see, dear, I could not leave here. For what if he came and found me away? He would say it was an odd fashion of mourning for him. And I could not do without the window, you know. I can watch all the brigs come in, and I can smell the shipping smell that I have loved all the days of my life; and I can see the lads heaving, and climbing, and furling, and mending these bits of canvas, and hauling their flags up and down. And then who can say?—the sea never took him, I think—I think I shall hear his voice before I die. For they do say that God is good."

Bebee, sweeping very noiselessly, listened, and her eyes grew wistful and wondering. She had heard the story a thousand times; always in different words, but always the same little tale, and she knew how old Annemie was deaf to all the bells that tolled the time, and blind to all the whiteness of her hair and all the wrinkles of her face, and only thought of her sea slain lover as he had been in the days of her youth.

She did not speak at all as she finished sweeping the bricks, and went down stairs for a metal cruche full of water, and set over a little charcoal on the stove the old woman's brass soup kettle with her supper of stewing cabbage.

Annemie did not hear or notice; she was still looking out of the whole in the wall on to the masts, and the sails, and the water.

It was twilight.

From the barges and brigs there came the smell of the sea. The sailors were shouting to each other. The craft were crowded close, and lost in the growing darkness. On the other side of the canal the belfries were ringing for vespers.

"Eleven voyages one and another, and he never forgot to tie the flax to the mast," Annemie murmured, with her old wrinkled face leaning out into the gray air. "It used to fly there; one could see it coming up half a mile off—just a pale yellow flake on the wind, like a tress of my hair, he would say. No, no, I could not go away; he may come to-night, to-morrow, any time, he is not drowned, not my man; he was all I had, and God is good, they say."

"He was all I had, and God is good, they say."

Bebee listened and looked, then kissed the old shaking hand and took up the lace patterns and went softly out of the room without speaking.

When old Annemie watched at the window it was useless to seek for any word or sign of her; people said that she had never been quite right in her brain since that fatal winter noon sixty years before, when the coaster had brought into port the broken beam of the good brig Fleur d'Epine.

Bebee did not know about that, nor heed whether her wits were right or not.

She had known the old creature in the lace room where Annemie pricked out designs, and she had conceived a great regard and sorrow for her; and when Annemie had become too ailing and aged to go herself any longer to the lace maker's place, Bebee had begged leave for her to have the patterns at home, and had carried them to and fro for her for the last three or four years, doing many other little useful services for the lone old soul as well—services which Annemie hardly perceived, she had grown so used to them, and her feeble intelligence was so sunk in the one absorbing idea that she must watch all the days through and all the years through for the coming of the dead man and the lost brig.

Bebee put the lace patterns in her basket, and trotted home, her sabots clattering on the stones.

"What it must be to care for any one like that!" she thought, and by some vague association of thought that she could not have pursued, she lifted the leaves and looked at the moss rose bud.

It was quite dead.

CHAPTER VII.

As she got clear of the city and out on her country road, a shadow fell across her in the evening light.

"Have you had a good day, little one?" asked a voice that made her stop with a curious vague expectancy and pleasure.

"It is you!" she said, with a little cry, as she saw her friend of the silk stockings leaning on a gate midway in the green and solitary road that leads to Laeken.

"Yes, it is I," he answered as he joined her. "Have you forgiven me, Bebee?"

She looked at him with frank, appealing eyes, like those of a child in fault.

"Oh, I did not sleep all night," she said, simply. "I thought I had been rude and ungrateful, and I could not be sure I had done right, though to have done otherwise would certainly have been wrong."

He laughed.

"Well, that is a clearer deduction than is to be drawn from most moral uncertainties. Do not think twice about the matter, my dear. I have not, I assure you."

"No!"

She was a little disappointed. It seemed such an immense thing to her; and she had lain awake all the night, turning it about in her little brain, and appealing vainly for help in it to the sixteen sleep angels.

"No, indeed. And where are you going so fast, as if those wooden shoes of yours were sandals of Mercury?"

"Mercury—is that a shoemaker?"

"No, my dear. He did a terrible bit of cobbling once, when he made woman. But he did not shoe her feet with swiftness that I know of; she only runs away to be run after, and if you do not pursue her, she comes back—always."

Bebee did not understand at all.

"I thought God made woman," she said, a little awe stricken.

"You call it God. People three thousand years ago called it Mercury or Hermes. Both mean the same thing—mere words to designate an unknown quality. Where are you going? Does your home lie here?"

"Yes, onward, quite far onward," said Bebee, wondering that he had forgotten all she had told him the day before about her hut, her garden, and her neighbors. "You did not come and finish your picture today; why was that? I had a rosebud for you, but it is dead now."

"I went to Anvers. You looked for me a little, then?"

"Oh, all day long, for I was so afraid I had been ungrateful."

"That is very pretty of you. Women are never grateful, my dear, except when they are very ill treated. Mercury, whom we were talking of, gave them, among other gifts, a dog's heart."

Bebee felt bewildered; she did not reason about it, but the idle, shallow, cynical tone pained her by its levity and its unlikeness to the sweet, still, gray summer evening.

"Why are you in such a hurry?" he pursued. "The night is cool, and it is only 7 o'clock. I will walk part of the way with you."

(TO BE CONTINUED.)

Speaker of the Nevada Assembly Becknell has instructed the Sergeant-at-Arms to refrain from selling spirituous or malt liquors in the Capitol during the session of the Legislature.

AN ILLUSTRATION

Of the value of extensive and judicious advertising of any article of undoubted merit is found in the remarkable success of the CALIFORNIA FIG SYRUP CO., which has simply been phenomenal, even in this age of great enterprises.

Organized a few years ago to manufacture a new and more perfect remedy than had ever been produced, a laxative with original and attractive features, prepared from delicious fruits and health-giving plants, one which would be pleasant and refreshing to the taste, as well as really beneficial to the system, the management very wisely concluded to select the leading newspapers throughout the United States to make known to the public the merits of the new remedy, Syrup of Figs. As happens with every valuable remedy, cheap substitutes are being offered to the public, but with the general diffusion of knowledge it is becoming more difficult each day to impose on the public. Health is too important to be trifled with, and reputable druggists will not attempt to deceive the public, as they all know that Syrup of Figs is manufactured by the California Fig Syrup Co. of San Francisco, Cal., Louisville, Ky., New York, N. Y. Do not accept any cheap, non-advertised imitations if offered.

No after triumph brought such joy,
Although our beards be gray,
As, with our first watch, when a boy,
We were asked the time o'day.

DISORDERS WHICH AFFECT THE KIDNEYS

Are among the most formidable known. Diabetes, Bright's disease, gravel and other complaints of the urinary organs are not ordinarily cured in severe cases, but they may be averted by timely medication. A useful stimulant of the urinary glands has ever been found in Hostetter's Stomach Bitters, a medicine which not only affords the requisite stimulous when they become inactive, but increases their vigor and secretive power. By increasing the activity of the kidneys and bladder, this medicine has the additional effect of expelling from the blood impurities which it is the peculiar office of those organs to eliminate and pass off. The Bitters is also a purifier and strengthener of the bowels, an invigorant of the stomach, and a matchless remedy for biliousness and fever and ague. It counteracts a tendency to premature decay, and sustains and comforts the aged and infirm.

Never speak ill of anybody; you can do just as much execution with a shrug of the shoulders or a significant look.

Dr. Wallace Ely has removed his offices to 215 Powell St., San Francisco, Cal., where he continues to give special attention to Kidneys, Bladder, Prostate Gland and all diseases arising therefrom. Diabetes and Bright's Disease treated according to the latest approved method. Most cases can be treated successfully by correspondence. Consultations daily from 10 A. M. to 4 P. M. WALLACE ELY, M. D., 215 Powell St., 3 doors from Geary St., San Francisco, Cal.

At twenty the will reigns, at thirty the wit and at forty the judgment.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pains or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Portenfield & Losey, 838 Market street, San Francisco.

If you do a man a favor, do not let him know of it, or the chances are he will come back for another lift.

Be sure you get the genuine as there are poor imitations.

"August Flower"

Mrs. Sarah M. Black of Seneca, Mo., during the past two years has been affected with Neuralgia of the Head, Stomach and Womb, and writes: "My food did not seem to strengthen me at all and my appetite was very variable. My face was yellow, my head dull, and I had such pains in my left side. In the morning when I got up I would have a flow of mucus in the mouth, and a bad, bitter taste. Sometimes my breath became short, and I had such queer, tumbling, palpitating sensations around the heart. I ached all day under the shoulder blades, in the left side, and down the back of my limbs. It seemed to be worse in the wet, cold weather of Winter and Spring; and whenever the spells came on, my feet and hands would turn cold, and I could get no sleep at all. I tried everywhere, and got no relief before using August Flower. Then the change came. It has done me a wonderful deal of good during the time I have taken it and is working a complete cure."
G. G. GREEN, Sole Man'fr, Woodbury, N.J.

SURE CURE FOR PILES.

Sure cure for blind, bleeding and itching Piles. One box has cured the worst cases of ten years' standing. No one need suffer ten minutes after using Kirk's German Pile Ointment. It absorbs tumors, allays the itching, acts as a poultice, gives relief. Dr. Kirk's German Pile Ointment is prepared only for Piles and itching of the private parts, and nothing else. Every box is warranted .....

THE KNOCK ALPHABET.

Acoustic Methods Used in Russian Prisons.

PRISONERS' MEANS OF COMMUNICATION

Words Represented by Knocks and Scratches.

And now for the "knock language," or "knock alphabet." There is a multitude of such alphabets at the various political prisons of Russia and Siberia, almost every prison having an alphabet of its own. The simplest system is: One knock at the wall signifies a, two knocks b, three knocks c, etc. But as the Russian grammar contains thirty-five letters, this system is tiresome and inconvenient, and to facilitate it various acoustic methods are used. A knock at a wall with the end of a finger sounds different from a knock with a knuckle. A thumb nail causes another peculiar sound. The sound of the palm of the hand is different from that caused by a fist. All the finger nails at once creates a peculiar sound of their own; the knuckles make the knock sound different than the finger ends, or the wrist, or elbow. Again various sounds can be elicited with every or several fingers at once, and the sound of a bass button or a penholder can also easily be distinguished. The formation of a knock alphabet further depends on the figures marked on the wall by the knocks. A straight line could easily be indicated by two knocks at different points, a triangle by three knocks, a quadrangle by four knocks, and so on. The time which elapses between the knocks is also taken into consideration, and some knocks often signify whole words and phrases.

WORDS AND PHRASES.

At the central prison of Belgorod, words frequently used were expressed by knock figures as follows: One knock with the end of the thumb signified yes; several knocks, repeated quickly one after another with the end of the thumb, signified no; a rectangle indicated by a knuckle, meant relatives; a square, friends, comrades, members of the same party; a straight line, what Russian prisoners call "volia," the outside, free world; two straight lines, Siberia; a triangle, prison; a bow, which was indicated by rubbing a brass button at the wall, prisoner; two parallel lines signified corridor; a vertical line, director; a crooked line, warder; a semicircle, mediator; a knock at the wall with the elbow, czar, and so on. Several knocks at the wall with the knuckles was a warning: "Don't knock, somebody is coming!" Two slow knocks at the wall signified: "Halloo, do you care to speak?" One knock with the knuckles and one with the ends of the fingers went for: "Wait, I am busy," and one knock with the whole palm signified: "Now, go on, I am ready to listen." I was expressed by a knock at the wall with the little finger; you, by a knock with the wrist.

Before entering into the minor details of the knock alphabet as it was in use at the central prison of Belgorod, a few preliminary remarks are deemed necessary. There are in the Russian alphabet hard and soft, long and short vowels, so called. Instead of giving their respective names, the approximately corresponding English vowels will be given below for the sake of convenience. The Russian g is pronounced like the English g in get. The Russian j like the French g or j in germain or jeunesse.

INGENUITY VS. THE CZAR.

The alphabet was composed as follows: One knock at the wall with the large finger stood for a, ia, or ya; two knocks with the same finger, e, ie, iou, or ye; one knock with two fingers, i, ie, ei, ea, or y; two knocks with two fingers, o, oa, io, or yo; one knock with the first finger joints, oo, ou, iu, or yoo. It must be said that for the sake of quickness the vowels were left out whenever it was possible. B or p was expressed by one knock at the wall with one knuckle, usually with that of the large finger; v or f by two knocks with one knuckle; g or k by one knock all knuckles, j or z by one knock with the thumb and the next finger put together, l or r by two knocks with the same, m or n by one knock with all fingers, s or sh by two knocks with all fingers, c, ts, or ch by one knock with the knuckles and one with the fingers, followed quickly one after another; kh or the German ch by one knock with a knuckle and one with a finger, sch or shtch was expressed by two quick snaps at the wall. As to figures, such were easily denoted by corresponding numbers of knocks. One knock with the middle joint of the large finger, a short pause, five knocks with the same slowly repeated, another pause, and two knocks with the fist went for 1,502, the 1st knocks indicating zeros, and so on.

As far as quickness is concerned, the above is the most convenient, if not the simplest, alphabet used in Russian prisons. It was not the product of a sudden discovery at the prison at Belgorod, but the result of modifications made gradually in the course of months. All sorts of systems were tried, not excepting the system used by telegraphers, that is, points and lines; or the so called figure system, that is, expressing, for instance, the twenty-fifth, twenty-eighth or thirty-third letter of the Russian alphabet by two and five, two and eight, or three and three knocks, with a pause between, but they all had to be given up. To make a line distinguishable it was necessary to rub some metal, for instance a brass button or chain joint, at the wall, but the sound was too sharp, and the warders could easily hear it. The figure system was too slow, monotonous and weary. Besides, the walls of the solitary cells of the Belgorod prison were of solid stone blocks, and this, perhaps, made the above system most available. Brick or wooden walls would have necessarily required a somewhat modified system. — Michael Malkoff in Chicago News.

Tricks of Chinese Traders.

A book might be written upon the palpable frauds and tricks, of which the Chinese trader is guilty. With a goose quill he blows up his mutton so that the veriest old scrag of a carcass looks fat and tempting. He tucks cobble stones into his heads of cabbage, which he sells by the pound. He sells dwarf orange trees loaded down with fruit, nine-tenths of which is cleverly wired on to branches which never fed and developed it. Or, if by accident, a hole has been knocked in the side of an old porcelain vase, he grinds the hole into some sort of shape, cleverly grinds, fits and glues any bit of old brick into the opening, and then so accurately reproduces in every detail and shade of color the outside decoration and glaze, that by the application of acid alone can the fraud be detected. The smallness of the profit to be derived from the fraud never deters him.—Chester Holcombe

GOING TO SCHOOL.

Burdette Pours Out Some Philosophy on a Painful Subject.

Dear little man, so you are back in school and you don't like it pretty well I don't think! Well, that's natural and boy like, but it isn't right. Going to school is great fun, after you are too old to go any more, which will be when you are old enough to die, and then I suppose you will go to another school. When I was your age I don't think I liked going to school a little bit, but that was because I didn't have very much sense when I was young. I only worked and studied about six or seven hours a day then, and had but three teachers to obey. I was the gladdest boy you ever knew, when I got out of school, and you never knew me. Since then I have been at work all the time, and have to obey more people than I ever saw in a school house at one time. The editor says if I don't have my composition ready by Friday night he won't have it at all, the foreman says he must have it in hand Friday morning or it won't go in, the proof reader says if he doesn't get the proofs Thursday night they will have to read themselves and the compositors—there are seventy-five or eighty of them—declare they will strike if I don't write more plainly and punctuate properly, and spell better. Then I used to recite before a small class, or the school at most, and now I have to read my composition and say my piece before all the subscribers. When I was a boy the teacher corrected me in the presence of the class, but now the critic, a terrible fellow he is, corrects me right out in print before everybody, and when I don't say my lesson to suit him doesn't he dust my jacket for me, though!

The way he makes the lint fly is a caution, and the worst of it is I daren't "holler," and so get over it; that would only make him worse, and beside everybody would laugh at me and cry, "Give him some more in the same place." He can—and does—say just as nice things as he does rough ones, but you have to dot your i's and cross your t's to earn his approval. Then I have to work for my landlord, and the grocery man and the tax collector and the shoemaker, and I don't know how many other people. I have to buy oil for the marching club of my party, and I have to march in the dust or the mud, and listen to long speeches and make some longer ones myself. I have to say "please" and "thank you," and say "sir" when I speak to the governor; I daren't go in my bare feet, and I've only been fishing once this year, and then I didn't stay long and didn't catch anything; at the table, no matter how hungry I am, I have to serve everybody else before I get a bite to eat myself, and I am always the last one waited on; a man down in Bogus Hollow says he is going to lick me for shooting his dog—and he looks like a man of his word, too—when everybody knows I'm afraid of a gun and couldn't hit a flock of barns anyhow, on a rest, and with globe sights; another man threatens to put me in jail if I don't pay a bill that I have three receipts for, and a poor widow woman in Rag alley, who takes in washing and gin, is going to sue me if I don't pay her $10 because my cow tore up her garden, when she has no garden and I never owned a cow in my life. I can't follow the circus procession, I can't stay home when I have the toothache, I can't get excused when the fish are biting; some of the boys in this great big school are bullies, and some of them are fools, and some of them are toadies, and some of them are sneaks, and some are liars, and some of them are great, big hearted, loving fellows, that you want to be with all the time, but they're so busy you can only snatch a word with them once in a long while. It isn't so very much different from your own school after all, only the discipline is more severe, and the Teacher is strict, while he is loving and gentle. But every time you break a rule you smart for it.

I don't wonder that some of the older pupils are glad, glad, glad, when their lessons are all said, and the blotted books are put away, and they are called up into the higher room, where they will be closer to the Master, and all the hard places in the old lessons will be explained away so lovingly and clearly that never a sigh will punctuate the recitation, and never a tear blister the pages that we blur and blunder over so stupidly and blindly now. Ah, my little man, you'd better learn to love your school; you'll never get out of it until they send word to the sexton that you have graduated. — Robert J. Burdette in Brooklyn Eagle.

A Vivid Tale.

Years ago, when guano was first discovered as a fertilizer, an old friend of mine sent me a bottle full to experiment with. I didn't think much of it, but one day while in my garden planting some cucumber seed I thought of the guano, so I took it along with me into the garden and sat down on the ground, scratched a hole in the earth, put in my guano and on it placed my cucumber seed, covered both carefully with the soil, and while sitting there but a few moments I noticed the earth over the seeds begin to move, and at the same time the young cucumber plants made their appearance. It was such a strange occurrence that I sat perfectly dumfounded, forgetting everything else. The vines began to spring and grow off like magic, and when I began to raise up I found my feet entangled with the vines. I, however, forced myself to a standing position. By this time I was completely enveloped with the vines. I made for my knife and succeeded in cutting myself loose and made my escape. But what astonished me most was the fact that when I got over the excitement and went to return my knife to my pocket, I found my pockets full of young cucumbers which had formed in my pockets, since which time I have had no use for guano.—Lagrange (Ga.) Graphic.

A Sure Way.

"John," said Mrs. Bentley, "suppose you heard a noise down stairs and didn't know whether it was the dog or a burglar, would you be so cruel as to send me down to find out?"

"No, dear," said Mr. Bentley; "I have a better way than that. I'd wait until next morning. If the silver was gone, I'd know it was burglars, and if the silver was not gone, I'd know it was the dog."—Harper's Bazar.

Fatherly Forethought.

He—I must break off my engagement, Violet.

She—Why should you do that?

He—Well, your father has failed; how can he support a son-in-law in the style in which I have lived?

She—Why, you goose, he failed on purpose to meet the extra expense!—Harper's Bazar.

SCOTCH OIL MINES.

A Field that is only Waiting for a Chance.

SCOTTISH WELLS CAN NOT BE WORKED

Profitably, until American Wells Run Dry.

William Findlay, of West Calder, Scotland, which is in the ancient oil shale region of that country, has been making a tour of the Pennsylvania petroleum fields, and was in New York recently.

"I am more than amazed," said he, "at what I have seen. The petroleum of Scotland is mined like coal, and although I had read of the oil wells of America, I was not prepared for such a vast difference in the methods of oil production. The Scotch petroleum is not in the fluid state, but in a shale formation. The extracting of the products of this shale was for many years a most important industry, and is quite an extensive one yet; but the American oil, both illuminating and lubricating, is now set down in our markets cheaper than the Scotch oil can be produced, and how long our oil production will last is only a question of how long national pride will resist considerations of economy.

"The Scotch oil shale is black, and lies at a depth of about 400 feet beneath the surface. The shale producing regions are all between Edinburgh and Glasgow, and are known as the oil fields of West Calder. They are very extensive, and literally inexhaustible. That is one hope we have. The fluid oil of this country will undoubtedly become exhausted or greatly curtailed in production some time in the future. When your fields cease to pour out a quantity of oil that enables you to refine it, export it, and sell it in Scotland at a less figure than it cost us to extract the oil from the shales at the very threshold of Scotch markets, we will come to the front with our oil mines again, and know that whatever happens they can't be exhausted.

"When the oil fields of West Calder were being operated to a full capacity the shale refinery there, known as the Addiswell Oil works, and which cover seventy-five acres of ground, gave employment to over 2,000 men. In various parts of the field there were shale crushing works, not unlike your coal breakers, where the shale is run on being taken from the mines. It is broken up into small pieces and the crude oil extracted at the crushers. What we call crude oil you would call tar over here. The refiners take it and from it extract illuminating and lubricating oil, ammonia and wax. The latter is called paraffine in the oil trade of this country. The tar from a ton of shale will yield fourteen gallons of illuminating oil. This is subjected to four different acid distillations, each one much heavier than any the American fluid petroleum requires. The result is a clear, white high flash illuminant, as good as American kerosene, but four times as expensive. If the American product simply came in competition with our illuminating oil, the effect on our trade would not be of much consequence, as in that branch of the Scotch oil business is not where the profit lies. The lubricant, the ammonia, and the wax are the products which make the shale mines valuable. The American lubricating oil is cheaper, and those who use it say better than any. The latter altogether I can't agree with. Of course the American oil does not interfere with our ammonia products nor with our wax trade, but we can't afford to produce kerosene and lubricating oil to throw away in order that we may get at the ammonia and wax that the shale contains. I am forced to say, therefore, to use an Americanism, that the Scotch oil business is not booming at the present time."—New York Sun.

Women Barbers for Women.

On one of the women's streets of this town, where the petticoats are so thick that a man is almost as much out of place as he would be at a ladies' luncheon, there is a woman's barber shop. It has not a striped pole in front of it. It is too æsthetic for that, and the women find it in flocks without such vulgar aids. It is a woman's place in the fullest sense of the word, run by women and for women. It is the outcome of the usual long felt want.

Of course, there were always places where women could get their hair dressed, but when the universal bang demanded constant attention these great artists were apt to act as if such ministrations were beneath their attention. Then they charged enormously. The places where they trim bangs cheap were dubiously masculine; even if they set apart a place for women there were glimpses continually of dreadful, collarless, lathered male beings, and to the inexperienced feminine mind nothing seems so indecent as a man being shaved.

Still another question of decency came in. The fine ladies who have had their hair dressed ever since they were 12 years old, and who patronize men dressmakers and milliners, of course, have no sort of objection to men barbers, but lots of young women in a less exalted sphere find it quite dreadful to have a man fussing half an hour over their heads. "You know," said one not over lucidly, "with the dentist you don't mind, because he hurts you so dreadfully all the time, but with a barber it is different."—New York Graphic.

Proud of Muddy Trousers.

A citizen stood at the corner of Fifth and Main streets yesterday afternoon, and his trousers were spattered with mud. He looked down at them lovingly and his face beamed with joy. His smile was so broad it was almost audible, and many passers by stopped to remark on the blamed idiot who enjoyed getting his trousers covered with mud. But the smile never left the citizen's face.

"Why don't you get a bootblack to clean them?" the Gossiper asked.

"Clean them? Not for the world. I shall always keep these trousers just as they are. I shall cherish them as a precious relic to be shown to my children and grandchildren. That mud, see, was splashed on my trousers by a messenger boy who dashed by me on a run."—Kansas City Times.

The Senate's Gavel.

The gavel used by the presiding officers of the United States senate has been in use over fifty-six years. It is made out of an elephant's tooth and has no handle, nor did it ever have one.—Chicago Herald.

The Reason Why.

Johnsing—Wonner why Gus Slasher wa' so quiet like to-night when yo' beat him at de kyards, Sam?

Smif—Guess h'd lef' his razzer at home, chile; an' he knows I never do.—Judge.

A California Ostrich Farm.

Ostrich Farm is one of the attractions of this region, and one that no admirer of the feathery kingdom can well afford to forego visiting, though it does cost fifty cents to cross the enclosure, which consists of a broad board fence that completely prevents a ghost of a glimpse of those aristocratic birds. I say aristocratic, because they are beautiful, valuable, and far, far above the average fowl in size and majesty of mien; besides, they contribute to something more than the mere essentials of existence. The refinements of life are strikingly suggested in those high stepping, lofty eyed, soft plumaged creatures, that appear to have been formed for an ardent, exclusive, elegant atmosphere. The manager in charge of the birds, who superintended their journey from South Africa, informed me that there were sixty-three full grown ostriches and twenty two chicks on the farm at the present time. Great care must be exercised in the choice and quantity of their food. They are liable to indulge in overfeeding, which produces yellow fever. They are also subject to the disorders common to barnyard fowls.

They make their own nests, lay one egg every alternate day, equal in weight and contents to twenty-eight ordinary hen's eggs. Twenty four days are consumed by the hen in her retirement previous to hatching, and fifteen is the usual number her nest contains. The food consists of corn, alfalfa, cactus leaves shorn of their thorns and all kinds of fruit, grass or grain. Every nine months their feathers are plucked; fifty feathers is the number usually gathered at a time. Those of the male birds are white. The female birds yield a variety of colors, but they are not considered as valuable. A pair of ostriches is worth $1,000. They are sold only in pairs. Mr. Atherton (keeper of the birds) regards this climate as favorable to the ostrich industry, and expresses his belief that it will in time become quite as common here as in South Africa, where every land owner keeps his pair or two of beautiful birds.—California Cor. New York Post.

One of Col. Ingersoll's Daughters.

Only a few weeks ago Miss Eva Ingersoll distinguished herself by an act of personal bravery that was remarkable, not alone by reason of having been accompanied by a member of the gentler sex. The young lady is a member of the Society for the Prevention of Cruelty to Animals, and she takes a very deep interest in the carrying out of the designs with which the association was formed. One day, as she sat looking out of the window over Fifth avenue, she saw a man beating a poor, shrunken, decrepit old horse attached to an ash cart. The young lady's sympathy was aroused at once, and with it her indignation. She went out into the street and asked the driver to abandon his ill treatment of the unfortunate brute under his charge. He told her to go to the devil, and as a means of self employment during her journey he continued to hammer the horse. Miss Ingersoll called upon a bystander to interfere. The bystander refused. She then exhibited her S. P. C. A. badge. The driver jeered at her and went on thumping the unfortunate horse.

Miss Ingersoll seized the bridle and was dragged along the pavements, to the great astonishment of a lot of people in masculine clothing, who looked on and said nothing. Finally a man rushed out from the sidewalk and stopped the procession. A policeman approached, the brutal driver was arrested, and the wretched old horse was turned over to the society. The animal was found to be in such a condition of illness that it was considered necessary to shoot it outright, and the driver was duly punished for his cruelty. A good many Fifth avenue fathers would have shrunk from the publicity occasioned by such an act on the part of his daughter. Col. Ingersoll didn't. He commended this brave and humane conduct, and so did pretty much everybody who knew about it.—New York World.

A Very Troublesome Language.

When first the Japanese learned from the Chinese the use of letters they, with characteristic ingenuity, adopted contracted forms of forty-seven Chinese characters to represent the syllables of their language, and at the same time with curious unwisdom adopted cursive forms of other characters to represent the same sounds. But, further, to make confusion worse confounded, they paid their instructors the compliment of taking over bodily their writing and their literature. There are thus three ways of writing Japanese—(one) with the forty-seven contracted Chinese or Katagana characters; (two) with the cursive forms of other Chinese or Hiragana characters; and (three) with the Chinese characters pure and simple. Every school boy has to learn these three systems, and his studies are complicated by the fact that while the first two systems are phonetic the third is mainly ideographic.

But we have not yet reached the end of the difficulties which surround Japanese writing. For although, as has just been said, the Chinese characters are mainly used ideographically, they may at the discretion of the writer be made to represent either the mere sounds of the Chinese words which they signify or the mere sounds of the Japanese words which they signify. To give an example—the Chinese character meaning "heaven," and pronounced Tien, when occurring in Japanese text may either be read according to an old Chinese pronunciation, Ten, "heaven," or as the Japanese word for the same meaning, Ame, or as simply representing the sounds of Ten or Ame, apart from their meaning. This is much as if our letters consisted of signs such, for instance, as &, which, let us suppose, might either be read "and" or "et," or as the syllables "and" or "et," and so be used in such combinations as h&, hand, or &ham, etham.—Saturday Review.

The Rattlesnake's Warning.

I am doubtless as little afraid of rattlesnakes as any one, for I have killed hundreds of them, and I know full well that, contrary to the understanding of mankind in general, the rattlesnake is the most peaceable member of the reptile family, and although possessing a death dealing power, he never uses that power except in self defense. I never knew one to strike unless he was trodden upon or provoked and injured in some way, and then the warning rattle comes first. He has no vicious qualities when not molested.

I have had horses nearly unseat me when this alarm was sounded near them, and I have seen 100 head of cattle, while being driven single file along a narrow trail, each in their turn jump three feet in the air as they passed over a rattler, and I have had a whole herd of cattle, 1,700 in number, stampeded by one of these reptiles suddenly springing his rattle under one of the leaders of the herd. Cor. New York Post.

STORAGE WAREHOUSE.

A Manager Chats About the Business.

MILLIONS REPRESENTED IN THE HOUSES

Summer Customers.—Removing Furniture.

The storage warehouse for the safe keeping of household furniture and articles of value of every description has become one of the permanent institutions of this city. It is said that the amount of property now in the custody of these storage warehouses will foot up into the neighborhood of $150,000,000. These warehouses are almost numberless, and are situated in nearly every section of Manhattan Island, especially where the population is of such a class that makes their presence practically a necessity, and they are of nearly every kind and quality to suit the surroundings. Some of them are absolutely fireproof; others claim to be fireproof, but have collapsed in a greater or less degree when put to the crucial test, while the third class makes little pretension in that direction, trusting to chance and a certain amount of careful watching to prevent their destruction by the flames.

It is at this season of the year that the capacity of the storage warehouse is tested to the utmost, for it is during the months of summer that so many city houses are closed while the occupants are away, and in a vast number of instances the owners prefer that their furniture and all their belongings should be cared for in the safest possible place. So to speak the storage warehouse has become the fashionable summer resort for the finest household goods of the city.

Through the courtesy of its manager, a reporter was permitted to examine one of the representative storage warehouses of this city. The building was, apparently, as indestructible as human ingenuity could devise. There was nothing in sight for the flames to feed upon, even if in some miraculous way they should chance to gain admission, for there were visible only stone, cement, iron and steel on walls, floor and ceiling. The various compartments in which were kept the thousands of dollars worth of goods entrusted to the care of the proprietors were all separated from the others so completely that a fire in one could not communicate with its neighbor.

"What people do you number among your patrons?" asked the reporter, when, after a tour of the building, the almost luxurious office of the manager was reached.

"Do you wish me to give you the names of our most prominent customers? Well, I regret that it is against our rules to do so. You can see that it would not be fair to divulge the names of those who favor us with their patronage, and, besides, the legal complications which might result would be likely to be serious."

"Why do the rich store their goods when they have houses of their own in which to keep them?"

"Well, for various reasons. Many prefer to leave their goods with us whenever they go to the country or seashore, knowing that they will be safer than in their own houses, while others are almost forced to do so from the stress of circumstances. I have in my mind one of the most prominent brokers on Wall street, who sold his house a week or two ago. It was a sudden transaction on his part, and he had made no provision for the disposal of his furniture, so he immediately sent it to us. Another similar case was that of the wife of one of the officers of the Chemical bank.

"The number of people who have gone to the seashore, to the mountains or to Europe this summer has been something wonderful, and within my experience I have seen nothing like it, and, I fancy, but a small proportion of the pleasure seekers have already gone. There are many of our patrons who do not store all their household effects during their three or four months of absence from town, but send us their silverware, bric-a-brac, paintings, bronzes, etc., for which we have especially prepared compartments.

"The age has advanced wonderfully with regard to the facility for removing furniture, so that in a measure the annoyance and loss which was occasioned under the old order of things is at a minimum now. Let me illustrate. Suppose that you had suddenly made up your mind to leave the city for an extended absence to-morrow morning, and had no time to attend to the removal of your goods today. You would have only to leave your order with us as to the time when you would be ready to have your furniture taken away, and our vans would be at your house in the morning. You could eat your breakfast in peace and comfort, your servants would not have even to make up the beds and the moment after you had started on your journey our workmen would be taking up your carpets, removing your pictures from the walls and carefully packing away your bric-a-brac. In a few hours your house would be absolutely denuded of everything, if you so desired, which would be safely stored away until your return. A day or two before your homecoming you could telegraph your expected arrival and the work of taking back your furniture would be carried forward as speedily as when it was taken away. Experienced hands would lay your carpets, while real artists in their work would hang your pictures and arrange your bric-a-brac and furniture, so that the moment you entered your house you would find it in better order than when you left it after breakfast on the day of your departure."

"What would you estimate as the value of the property in your custody at the present time?"

"It is difficult to make an exact estimate, but I should say that it is not less than $25,000,000."—New York Mail and Express.

Concerning Opium Culture.

In a few states the farmers have experimented a little with the white poppy, but we have not regarded opium as ever likely to cut much of a figure among our products. Mr. Pratt, the United States consul at Teheran, who has been studying opium culture in Persia, where a very fine article is produced, says he believes large regions in California and the southern states are well adapted to the cultivation of the white poppy, and, in view of the superior quality of Persian opium, he details the methods of cultivation in vogue there as a guide for our poppy raisers. Though the abuse of opium has made it, in the opinion of many, a disreputable drug, it serves a large number of useful purposes, and if we could raise what we require for legitimate uses opium culture would be a considerable addition to our wealth producing resources.—New York Sun.

A Physician's Fantasy.

There is a very well known physician in town who believes in the transmigration of souls. His theories in fact are not unlike those of the Buddhist, who believes that his soul has climbed to its present estate through successive dwellings in the bodies of brutes. The doctor is convinced that during his last incarnation he was a cat. Therefore he pays his respects to cats in every manner possible. His house is the asylum of "strays." He binds up their wounds, he restores their coats, he feeds and pets them and he has them by dozens.

When the house becomes overrun he will consent to let "good and reliable" families take some of his pets. In addition to these unfortunates the doctor has some aristocratic cats—cats with a pedigree. These are marvels of beauty and of pride, varying in color from the one of ebony coat to the lithe maltese and the tortoise shell, whose mew is musical above all others.

The scarf pins of the physician are cats made out of moonstones or agate, with ruby or topaz eyes. His cuff buttons are cats, and a sort of conventionalized cat presides over his stamp in the blank leaves of his library rooms. It is indeed his coat of arms, and silver and china both bear it. But the crowning curiosity is the enormous Persian cat which, stuffed, sits in a niche in the hall to remind the doctor of a perished pet.

It is but fair to say that this admiration for cats is no affectation on the part of the physician, who is a very sincere and simple man, but is really the result of a deep conviction. He has a theory concerning each of his friends, and the animals which he considers the ancestors of their souls are not always those which would be chosen if one had an opportunity of choosing.—Chicago Herald.

Didn't Know When He Was Well Off.

"There are men," said the melancholy looking individual, "who never know when they are well off. I speak from experience, for I am one of them. I once paid attention to a lovely young woman. She was so sweet that the flies would all go to her and leave me unmolested, and I used to sit with her for hours of a summer evening, and while the flies swarmed upon her I enjoyed perfect immunity from the rascals. But, alas! I didn't know when I was well off. In an evil moment I asked her hand in marriage, and she shook her head so decidedly when she replied in the negative that she shook all the flies off her, and then stalked out of the room, leaving me to be preyed upon by the varmints. If I had only been satisfied to let things remain as they were I might have passed through life peaceful and contented. But, as I said, there are men who never know when they are well off.—Boston Transcript.

A Bicyclist in China.

As we proceed down the street my appearance seems to stir the population up to a pitch of wild excitement. Merchants dart in and out of their shops, people in rags, people in tags and people in gorgeous apparel, buzz all about me and flit hither and thither like a nest of stirred up wasps. If curiosity has seemed to be rampant in other cities it passes all the limits of Occidental imagination in Ki-ngan-foo. Upon seeing me, everybody gives utterance to a peculiar spontaneous squeak of surprise, reminding me very much of the monkey's notes of alarm in the tree tops along the Grand Trunk road, India.

By the time we are half way along the street the whole city seems in wild tumult. Men rush ahead, peer into my face, deliver themselves of the above mentioned peculiar squeak and run hastily down some covergent alley way. Stall keepers hastily gather up their wares and shopkeepers frantically snatch their goods inside as they hear the tumult and see the mob coming down the street. The excitement grows apace, and the same wanton cries of "Fankwae! Fankwae!" that followed me through Kan-tchou-foo are here repeated with wild whoops and exultant cries. One would sometimes think that all the devils of Dante's inferno had gotten into the crowd and set them wild with the spirit of mischief.—Thomas Stevens in Outing.

The Harvest Trust.

Combinations among manufacturers seem to have become almost an epidemic in the East. Efforts to combine have lately been made, and are still being made by manufacturers in almost every line. This is especially true of manufacturers of farm implements and machinery. The most gigantic of these is the $35,000,000 harvester trust, of which Cyrus H. McCormick is President; Walter A. Wood, Vice-President; and William Deering, Chairman and Treasurer. This combination comprises all the leading manufacturers of harvesting machinery in the United States, excepting D. M. Osborne & Co., of Auburn, N. Y., who refused to enter it. This company is very strong, employing 1,600 men in their factory, and should this great trust materialize, their competition will cut no small figure, and we may look for interesting developments. Indications, however, now point to an immediate dissolution of this gigantic trust, owing to some legal complications presented by recent decisions in the "sugar trust" case in New York and the "gas trust" case in Chicago.—*Yamhill County Reporter.*

Lottery Mail Matter Seized.

CAMDEN, N. J., Jan. 21.—Postmaster Browning made his third seizure to-day of lottery mail matter addressed to residents of this city. The matter consisted of about seventy-five circulars of the Louisiana Lottery Company, stating that a drawing of the lottery would be held on the 17th day of February, and that all tickets drawing less than $1,000 would be cashed at an address in Boston, and those drawing over that amount would be cashed at New Orleans.

In accordance with the instructions he has received from Washington, Postmaster Browning forwarded the entire lot to Postmaster General Wanamaker.—*N. Y. Sun*, Jan. 22d.

FROM OVER THE SEA.

Articles of Commerce from the Tropics.

HOW THE HINDOOS GATHER THE COCOANUT

Ports Where Clearing Papers From America are Seldom Used.

The marine investigator at Sandy Hook, casting his eyes seaward the other day, spied something which unaccustomed eyes would not have seen. He clapped his glasses, fine double extra power ones, to his eyes and stood in a posture of scrutiny for many moments.

"It's a bark," says he, still focussing his glasses on the distant object.

A shadowy substance began to appear on the horizon. The eye of the landsman would have simply noted that something that sailed was approaching.

"She's Nova Scotian," was the laconic utterance that came from beneath the binoculars.

"Then it's the Strathay, now due," was the equally laconic outcome of a marine encyclopedia who stood near.

Pretty soon the bark's sails loomed up against the horizon and she came whooping along in a spanking breeze to the lower bay. She was the Strathay, ninety days from India's coral strand, and she bore a royal cargo. When Capt. Urquhart got his quarantine papers he brought his vessel in tow of a tug, her streamers flying, up to a Brooklyn pier, and a long sea voyage was ended.

The Strathay comes from ports whence clearing papers from America are seldom issued. She has been in the dismal and frightfully hot harbors of Alipee and Cochin, on the Malabar coast, in the southern part of India.

CEYLON'S SPICY BREEZES.

She had lain for days getting the spicy breezes of Ceylon at Columbo, and the blood heat rays of the sun, and there took in 1,000 barrels of plumbago. Then in southern India, where the man eating crockodile abounds, and sharks turn on their bellies and swallow men at a crunching gulp, she found 1,200 barrels of cocoanut oil, which will be evolved into American soap, and a great quantity of the matting that is made from the fibrous bark of the cocoanut. Then the Strathay was ready to make for civilization and New York, and she came along with some rip-roaring breezes, a great commerce bearer, under a foreign flag.

Only two or three vessels arrive from Alipee and Cochin in the course of a year. The freights of these are consigned to the firms who virtually monopolize trade from this quarter.

There are no harbors at these ports, and vessels are obliged to anchor two miles off in the open sea. Though havenless the land is fissured with many lagoons or backwaters. The country is low and sandy and covered with luxuriant vegetation and vast forests of palm trees. From the latter are obtained the chief commodities of commerce. The straight stemmed trees are from forty to eighty feet high, and the natives climb these with the aid of a short cord, connecting their big toes, which helps ascension by fitting them into grooves of the bark. After the nuts are knocked off the thick husks are separated from the inner shell by sharp iron spikes, and then laid in pits dug along the seashore, where the salt water macerates them. When the husks become sufficiently pliable they are taken out and beaten with clubs, which completely parts the fiber from the pithy portion. It is then thoroughly cleaned and dried, and known as khair or coir, and is twisted into yarn and then woven into matting. The kernels, by hydraulic pressure, yield the oil now so much used by American soap makers, as it produces soap capable of floating upon water. Thousands of Hindoos, male and female, are employed in these industries by the white merchants. They are very docile, exist on rice, fish and fruits, and receive equivalent to five or six cents for their daily wage.

SPECULATORS' MISTAKE.

Two or three years ago a great speculation took place in the raw fiber, and thousands of bales were imported and held with the expectation that it would figure largely in mattress stuffing and kindred uses. This was not realized, owing to the fiber's lack of elasticity, and speculators lost heavily. It is said that the French are beginning to make cuirasses of it for their ironclads, as it offers more resistance than steel to a cannon ball, and a greater value may be put upon it in the future.

Other articles of commerce seldom heard of come from this far off shore. Cus-cus, a fragrant root from which sachet powder is made; citronella and lemon grass oils, also used in perfumery; the button like seeds of nux vomica, containing the principle of strychnine; cardamoms, cinchona and turmeric, a yellow root used in dyeing, and which is said to be used in the adulteration of mustard.

Eight white people and 30,000 natives compose the population of Alipee. About seventy-five different castes are represented. The climate is tropical, but healthy. Melting eyes and well favored forms are reported to be characteristics of the Hindoo females. These are possibly enhanced by the limited inventory of apparel, a palm leaf or two covering the whole body. The sailors are not proof against their seductions, and rigorous measures have to be taken for their restraint. The mate of the Strathay, a bronzed Scotchman, said to a reporter sadly:

"Th' weemen played the deevil wi' the sailor lads! Ah, coodna gang asnoor the twinty days we were off th' port, for ma time was taken oop watchin' 'em! Why, mon, we had to fawsten the chield's hawnd an' fute, an' even then, wad ye think it, twa o' 'em breaks loose, jumps over the side and swums awa' to the shoor an' w' never clapt een on' 'em after!"—New York Evening Sun.

Photographing Female Criminals.

"Do you have trouble in getting female criminals photographed?" was asked of Inspector Byrnes.

"Very little. When told they must have their pictures taken they usually cry and make a fuss, but when the operation is about to be performed it is funny to see how quickly they dry their eyes and smooth down their hair, and prink up with a manifest desire to look as pretty as possible. This applies to nine cases out of ten."—New York Sun Interview.

Greenhouse Strawberries.

Greenhouse strawberries take about six weeks to fully ripen. A peculiarity of hothouse ripening is that instead of ripening first at the stem, gradually extending to the point, as is the case in the field berry, the greenhouse berry ripens at the point first.—Boston Budget.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY MARCH 20 ..... 1891.

The New England States are manifesting a very niggardly spirit toward the World's Fair. Californias appropriation of $300,000 exceeds the combined appropriations of all the six New England States. Tennessee appropriated $250,000, while Massachusetts appropriated only $90,000.

The death of John F. Swift deprives the Republican party of one of its ablest leaders, and the State of a thoroughly good man. He was untainted with political bossism, and so entirely independent as to interfere with greater political advancement. He was a man of high intellectual attainments and an author of considerable ability. His sudden death causes deep regret.

The following is an extract from a letter by Arthur McEwen, formerly of Virginia City, the most fearless political writer on the coast.

"It is a lucky thing for California, by the way, that Nevada has sent to the Senate such men as Stewart and Jones. The former has energy enough to represent half a dozen States, and the latter intellect sufficient to reflect honor on the whole coast. They are in reality the guardians of California's interests at the capital. In their case a senatorship is not what it usually is—the privilege of standing on a pedestal high enough to enable the whole country to see the purchaser's incapacity and gross vanity—a vanity as witless as that which moves the woman who displays with pride on the promenade the sealskin cloak which is the price of her chastity. That's the sort of toga now for sale at Sacramento."

There is a strong probality that Senator-elect Palmer of Illinois will be the next Democratic nominee for President. The Western States will exert a strong influence in the next National Convention, and in view of the unsettled condition of affairs in New York, and the factional differences there, it is quite likely that some Western man will be nominated. General Palmer did good service throughout the war and would receive a strong Grand Army following. He was elected Governor of Illinois as a Republican and resigned because of Federal interferance in placing Chicago under martial law after the fire. He has since been a Democrat. He is entirely acceptable to the Farmers' Alliance and would be a very strong candidate.

After balloting one hundred and fifty four times General John M. Palmer was declared elected United States Senator for Illinois. The legislature was composed of 101 Democrats, 100 Republicans and 3 Farmers Alliance, the balloting throughout standing just in that way. Palmer thus had a plurality of one, but a majority, or 103 votes were necessary to elect, and these were secured on the last ballot by two of the Alliance members voting for Palmer. At the last general election in Illinois all Democratic candidates for the Legislature were pledged to vote for Palmer, and all Democratic ballots bore for motto, "For United States Senator, John M. Palmer." The tallies of the popular vote showed that he was elected by 20,000 majority. The dead-lock was caused by the Republican hold over Senators. The election of Palmer was only fulfilling the popular will.

Last Monday the citizens of New Orleans arose in a body and summarily disposed of the Italian murderers of Chief of Police Hennessy. After a trial of twenty five days the jury failed to find a verdict of guilty in spite of the most direct evidence. A mass meeting was held by the leading citizens of the city, and the people assembled to the number of 3,000. Arms were supplied to responsible parties, the jail was taken by force and eleven of the brutal murderers were shot to death. The jurors who were bribed to render the verdict they did, are now hiding from the outraged public, and the man who effected the bribery is fleeing for his life. The present jury system is a strong incentive to crime, as the bribing of one man completely subverts the ends of justice. Hennessy had succeeded in bringing a number of Italian criminals to justice, and the Mafia, the Italian nihilist society, resolved upon his death, which was accomplished with systematic cunning. The transplanted of these foreign murderous societies will not be tolerated in the United States, as the execution of the anarchists in Chicago, and the late action of the people of New Orleans testifies.

Italy says she will send an iron-clad to enforce satisfaction from the United States for the execution of the New Orleans murderers. She may possibly need two of them before she gets through.

A CHEAP NEWSPAPER PLANT.

Twenty Dollars Purchased an Office and Good Will in Wyoming.

"Bought a newspaper for $20?"

"That's what I said," replied a tall, lame man with a G. A. R. button. "Young Smidgely went out to Nebraska in 1877, about the time Bill Nye started his Boomerang in Laramie, Wy., and bought out the Lone Tree Courier, good will, office fixtures, plant and everything, for $20. He sold the same paper in two years for $6,250."

"Great financier?"

"Yes; a judicious combination of finance and journalistic instinct. Smidgely arrived in Lone Tree with only $25, and put up at a hotel where the two men—or rather boys—who owned the paper boarded. One of them was a printer—the younger one; the other was a stock man up on the Loup river who didn't know an em quad from a tripenny lath nail. The price asked for The Courier was $1,400. Smidgely looked the office over, said he'd take it, paid the boys $20 down, pulled off his coat and went to work. There was of course a mortgage on the outfit. I never saw a country paper in that state without one. One note of $700 was due the next week. Smidgely got out a rattling good paper—it was a weekly. The first issue showed up signs of improvement, and then he went down and introduced himself to the county treasurer.

Before he left he got that official to promise to use his influence with the county commissioners in getting the tax list to publish, and finally succeeded in borrowing $800 on the promise of a good bonus on the tax list fat. The list came to $1,100, all clear money by the way, and then Smidgely got the county commissioners to publish the official proceedings of the board—something that had never been done before—and this at 40 cents an inch, he fatted up to be worth at least $50 a week—all net gain. The whole town fell dead in love with Smidgely, advertising rolled in, they elected him justice of the peace, sent him to the legislature and boomed him for all there was in sight. Well, when the man came along, as I said, Smidgely sold out for $6,250, went to Denver and sunk the whole in some mining speculation. Every word of this story is true, and it shows the possibilities which are always looming up in young states for young, enterprising men."—St. Paul Pioneer Press.

Much Virtue in Gulf Water.

Probably you never heard of it before, but the water of the Gulf stream is confidently believed by certain old people on Staten Island to be a sovereign remedy for disorders of the stomach. They drink half a glassful after each meal, smack their lips, and in about three days they get well. So they say. So pilots and other seafaring men who get out to the Gulf stream are frequently importuned to bring in jugs of the gulf water for the invalids. There is a saloon keeper down there whose faith in this sort of thing is unlimited, and he has been besieging for about three years a certain pilot of his acquaintance to bring him in some of the water. But the pilot always forgot.

The other day, however, he tickled the old man almost to death by bringing him three jugs of the precious liquid. The saloon keeper began to brace up at once, and three days later he chased the pilot half way around the island to overwhelm him with gratitude.

"So it did you good, did it?" says the pilot.

"Good?" says the old man. "Why, bless you, my boy, it has added ten years to my life. I feel like a youngster again. I'll bet I can beat you in a foot race right here."

And the pilot did not smile nor jibe nor jeer. But when the flood tide had been running about an hour that evening he went softly down to the end of Stapleton pier, drew out a tin bucket and dipped up about a gallon of the limpid stream. And the next morning the saloon keeper was overjoyed to get two more jugs of Gulf stream water from his thoughtful friend.

"It's kind of a shabby trick," says the pilot apologetically, "but as long as there are buckets handy around Stapleton I guess Uncle Josh needn't go without Gulf stream water."—New York Herald.

Truth Is Stranger Than Fiction.

A well known novelist of this city was telling how he finds his plots. "I have found nearly all of them in real life by intercourse with people in all sorts of society. There are no plots to be drawn from the imagination that are equal in interest to those that can be learned by knowing the actual experiences of many of our men and women. Here in New York you can hear of plenty of lovelorn damsels and bold swains; you can find heroes and heroines a-plenty; you can hear of marvelous adventures; you can find people whose career has been romantic; you can hear of intrigues and their denouement; you can meet characters who would shine on the printed page; you can easily find in the actual experience of your acquaintances all the material needed for tragical tales or humorous yarns. Why, the best plot I ever wrote up was not of my invention, but was in the story of her own life given me by my cook."—New York Sun.

The Value of Cathartics.

Paradoxical as it may seem cathartics are remedies for diarrhœa as well as constipation. That is, in the earliest stage of diarrhœa the first thing needed is to wash out the intestinal canal. Castor oil has peculiarities which recommend it for this purpose. In most cases if the intestines are properly freed and the diet is restricted for a few days to bland foods the diarrhœa will subside without further treatment. If it does not small doses of paragoric will generally greatly favor a cure.—Boston Herald.

A daughter of Gen. Rosecrans is an Ursuline nun, who until recently was assigned to the convent at Santa Rosa, Cal. Fifteen years ago she was one of the most charming and most popular of the society ladies of Cincinnati.

Steel Tanks for Storing Grain.

A new method of storing grain is being introduced. Steel tanks are filled with grain and by a suction pump the air is partly exhausted and a quantity of carbonic acid gas admitted.—Lewis-

FOUND DESERTED ON A STONE.

A Touching Story of the Child of the Author of "John Halifax, Gentleman."

Every woman in the land has bowed down before "John Halifax, Gentleman," but how many know much of the life of the woman whose brain child he was? There is in it a little romance that I am sure many will like to hear. Married to a gentleman who was a cripple, Mrs. Muloch Craik lived an idyllic life at a beautiful country home a few miles from a county town. She heard one day, quite incidentally, that a baby had been found on a stone at the cross roads, that it had been taken to the town hall, and that all the gentry about were going to look at it because it was such a sweet little child. So, following the example of her neighbors, she went too. Looking up into the sweet, sympathetic face of the famed authoress, the little baby smiled and put out its wee hands.

Dinah Muloch Craik could not resist this, and so she determined to take the child for her very own. Quickly it was wrapped up, and it became her baby. Devoted to it, she was yet determined as it grew older it should never have its heart hurt by being told the story of its birth and adoption; so as soon as the little girl was able to understand, it was lovingly whispered to her that she had been found on the large stone which stood in the center of the hall, and which always was decorated with flowers, and that God had put her there that her mother might find her. As soon as she grew old enough it became her daily duty to cut the flowers and arrange them to make beautiful this great rock that had been dug up from the cross roads and brought there.

To her it represented the place where the hands of the angels had rested when they laid her down. Curiously enough, the child became very proud of the way in which she had reached the dear mother who cared for her as lovingly and as tenderly as if she were really her own flesh and blood. Her birthday was the day on which she was found, and when the tenth one came around and a child's party was given her she was heard asking one little girl, "How old are you?" The other one answered, "I was born nine years ago." "Oh!" answered the baby, "you were born like other children, but I am better than that; I was found just where God had placed me." The childish pride was as amusing as it was pathetic.

The years have gone by, the eyes of the good mother are closed forever to the sights of this world, but the child she cared for lives in the great town of London and remembers, and when the mother of "John Halifax, Gentleman," and of this girl stands before Almighty God, don't you think that he will say, "As ye have done it unto the least of these, so I will unto you."—Ladies' Home Journal.

Women on Another Star.

In Camille Flammarion's last romance of the stars some quaint and interesting fancies are given regarding the planet Mars. The poet-astronomer imagines that in our next starry neighbor the density is so slight that material substances are very light, and that thus the living beings corresponding to ourselves are vastly more ethereal, delicate and sensitive than the inhabitants of earth. Dwelling farther from the sun than we, their optic nerve is more powerful, and that fact, together with superior magnetic and electric influences, creates senses unknown to us and unimaginable by us. Everything is so much less ponderable, so much more unsubstantial than with us, he goes on to fancy, that the people there might be called thinking and living winged flowers, for in the tenuous atmosphere wings had the first chance at development, rather than a more terrestrial method of getting about, evolution having taken place in a series of winged species, and the people living as much on the air and on aerial plants as on the ground.

Here also the density of the body and its weight being so slight, all organisms are very light and delicate, no other food being taken than that drawn from the atmosphere; thus the female sex is the predominating one, living on the airs of spring and the perfume of flowers, the absence of gross food preventing gross ideas and clarifying the intellect to an immense power, while an unspeakable charm is exercised by these women in the flattering of their wings and in the kiss of a mouth that never has eaten. —Harper's Bazar.

Special Delivery Stamps.

He was a stamp fiend, young and precocious. The plain American stamp had no interest for him. He was making a collection of foreign ones, and so when they sent him down to the postoffice for a package he did not pay much attention, but brought it home and handed it over, and skipped out to play tag. Next day they showed him a new sister who had arrived. He looked at her with some curiosity.

"Say, where did she come from?"

"Oh, from heaven."

"From heaven! I know. That was the package I brought from the postoffice yesterday, and I never knowed anything about it."

"Yes."

"Golly! why didn't you save me the stamps?"—San Francisco Chronicle.

A Sacrilegious Robber.

A stranger entered the Church of the Assumption, Brooklyn, one Saturday morning, and, borrowing a rosary from the sexton, knelt in apparent prayer. When the sexton, who had been out, returned a few minutes later the stranger had vanished. So had two silver chalices, two silken stoles and two prayer books. Chase was given and the fellow was caught. Upon his person was found the booty taken from the church, as well as three silver coffin plates bearing the inscription, "Rest in Peace."—Philadelphia Ledger.

Merely Eccentric.

Visitor—Who is that crazy fool?

Host—He is not a crazy fool. He is merely eccentric.

Visitor—Rich, eh?—Good News.

A Queer Find.

A few days ago a young woman over in Jersey City lost one of the silver tips from her pocketbook. She made a vigorous search in her home and along the way of her daily travel without finding any trace of it. Four days afterward she met a friend who noticed that one of the silver corners of the pocketbook was gone. Laughing the friend put her hand into her pocket, saying, "I believe I've just found a silver tip that will fit your pocketbook." And it not only did fit, but it was none other than the very tip she had lost.—New York Evening

EVENING AT THE FARM.

Pale twilight rises and with hurried pace
Fast follows where the sun has kissed the sand;
With misty touch conceals his last warm trace,
And blows her softening dusk breath o'er the land.

The drowsy bird note dies upon the breeze;
Shy flowrets lock their faces from the dew;
The shadow falls no longer from the trees
Where sport tired lambkin rests, or sober ewe.

The barnyard clamor ceases, kine are fed;
The sad flecked dull horse munches in his stall;
The watch dog turns him to his straw lined shed,
Nor deaf through sleep to faintest danger call.

Within the farm house porch in dreamy mood,
The day worn toiler takes his well earned rest,
While laddies youngsters watch with round eyes skewed
To catch the dustman in his evening quest.

It is the hour for silent spirit hands
To speed with white winged prayer—now perfect grown,
As day's long Labor, folds his weary hands,
Nor yet has Sabbath Slumber to his throne.
—Josephine Pacet, Spoons in New Orleans Times-Democrat.

She Caught a Mouse.

Sunday evening a gentleman and his wife, who live on a street pretty near the tunnel, attended evening service at the Fourth church and took seats in the gallery. The service was about half over when they were annoyed by a continued tittering and scuffling back of them, and looking around they saw several girls standing upon the seats, while a number more were moving uneasily about as if trying to avoid some danger. Just then the word "rats," uttered in a stage whisper, partially solved the trouble, and the man turned toward his wife. His wife is mortally afraid of rats and mice, and the mention of the word "rats" at her to thinking.

Presently the people in the gallery began to leave, but the scuffling continued until the lady whispered to her husband that they, too, had better go. So they arose and left, and the lady breathed freer when she reached the street. When they arrived at home they were laughing at the incident, when the lady screamed and jumping into a chair grasped something in the folds of her dress. "It's the mouse," she said to her husband as she clung to her garment.

She was right, too, but it was dead, probably from the clutch she gave in her excitement.—Hartford Courant.

Editor Warner on the Slot Machine.

Charles Dudley Warner, while moralizing upon a well known tendency of modern times in Harper's, has something to say regarding the possible future development of some recent familiar inventions. "Perhaps," says he, "we may expect a further development of the 'slot' machine. By dropping a cent in the slot one can get his weight, his age, a piece of chewing gum, a bit of candy or a shock that will energize his nervous system. Why not get from a similar machine a 'good business education,' or an 'interpretation' of Browning, or a new language, or a knowledge of English literature? But even this would be crude.

"We have hopes of something from electricity. There ought to be somewhere a reservoir of knowledge, connecting by wires with every house, and a professional switch tender, who, upon the pressure of a button in any house, could turn on the intellectual stream desired. There must be discovered in time a method by which not only information, but intellectual life, can be infused into the system by an electric current. It would save a world of trouble and expense."

Long Prayers.

An Irish priest at Ballymagan told the following story of his bishop. His lordship and a chaplain came to see the Passion play. They would fain have had a room each, but this was not possible. They knelt down separately to say their prayers by their little cots, and presently it crossed the mind of the chaplain that it would not be well to make his orisons shorter than the bishop's, and he glanced over his shoulder to see if his lordship was about to make an end.

The bishop, presumably anxious not to scandalize his chaplain by the shortness of his prayers, also glanced over his shoulder and waited. The process was repeated several times. Both supplicants were very fervent, and in time both fell asleep. They were found in the morning on their knees still and sleeping.—Pall Mall Gazette.

Quite a Traveler for a Turtle.

W. E. Hellenbrand, of Oldtown, came into possession of a turtle lately at Pushaw, which bore upon it the evidence of having reached years of discretion and of having been—for a turtle—quite a traveler. It was marked "J. W. Sewall, 1871," and Mr. Sewall remembers that when camping in his boyhood on Pushaw lake he found the turtle near the outlet and cut his name upon its shell. The animal was found a short time ago in the "Therofare," near Orson island, some sixteen miles from its former place of capture, showing that it had traveled on its average about a mile each year. Mr. Hellenbrand's son Walter marked it and released it for further adventure.—Bangor (Me.) Commercial.

The Oldest Place in America.

"Do you know the oldest place in all America?" said Gen. John R. Henderson, of St. Louis, to a circle of friends. "I don't mean the oldest town in the country or on the continent, but the land first found on the western hemisphere. No? Well, I thought not. It is Mount Marcy, in the Adirondack mountains. Agassiz and other geologists have figured out that Mount Marcy was the point of land that made its appearance first above the water when the western hemisphere was evolved."—Chicago Herald.

The Longest Passage on Record.

The British ship Hospodar, Capt. Thomason, arrived in port Oct. 16 after a passage of 171 days from London, England, via Rio Janeiro 131 days and Valparaiso 60 days. The passage of the Hospodar is the longest one ever made by a vessel between the two ports. She left London on June 29, 1889, and on Dec. 27 was reported at Rio Janeiro with rigging damaged and the captain sick. On Dec. 30 word was received that the vessel had been dismasted. The captain went home and the mate, Thomason, took command. New rigging was sent out from England, and after refitting the Hospodar sailed on March 18 for this port. On Aug. 5 she put into Valparaiso and sailed again the same day. Capt. Thomason states that he does not know exactly where the vessel was when she was dismasted, as the captain took her logbook home with him. He says that he put into Valparaiso, being short of provisions.—San Francisco

Barking of Dogs.

In writing of the native dogs of Central America Frederick Boyle brings forward a theory as to how dogs form the habit of barking. He was discussing with an old resident of the country some traits of the "coyote," as the native wolf is called, but which more nearly resembles the dog.

Dogs will never go wild so long as they can find a master to serve, and more especially trained dogs. The coyote never barks, and only gallops when pursued. In regard to the first of these points, says Mr. Byam, a remark made by an old Indian struck me.

"Why won't these coyotes bark like other dogs?" I asked him, pointing to one I was trying to reclaim, "and why do they only howl and the pups grunt?"

His answer was, "He won't learn."

"Not learn?" said I. "What do you mean?"

"No," he replied, "not learn, for if he were of an honest breed he would bark, to try and imitate his master, or at all events the other dogs, but all barking proceeds from dogs imitating their master's shout. The master shouts to frighten away cattle from his maize field—the dog barks directly; the master shouts to drive in cattle to the corral, and the dog barks also. In fact, the dog imitates his master when he barks; he tries to speak, but cannot."

I give this curious observation as the only attempt I ever heard to account for the barking of our tame dogs. No wild breeds make any noise except howling and snarling, nor under the best circumstances will they learn to bark until the third or fourth generation, a length of trial which Mr. Byam does not appear to have given the coyote.

A Thief Detector.

"When we started I noticed," said one of a party of jewelers who had camped in the wilds of Canada, "that one of our number was incumbered with a large box. The second day in camp two watches disappeared, and each member of the party began to look upon the others with silent suspicion. Finally, as the thefts were repeated, a meeting was called, and every man pleaded not guilty. No one up to that time suspected the honest French Canadian lad we had engaged as a servant. He was questioned and also entered a prompt and emphatic denial. We all believed his protestations of innocence except the man with the box.

"'Gentlemen,' said he, 'somebody in the party took those watches, and I propose to find out who. I have here a thief detector,' pulling out an electric battery and winking at the crowd. 'If there is a thief among us this will point him out.' Every man took his turn at the battery. The boy watched the performance in wonder. He had never seen such a queer arrangement before, but as everybody who touched the coils escaped without harm he stepped bravely to the front when it came to his turn and took hold. A sudden change came over him. The owner of the battery had turned on its full force, and the victim gave a yell of pain and horror, and fell to the ground screaming: 'Save me! save me! I took 'em, but I'll never do it again!'"—Jewelers' Weekly.

The Armenian Houses.

The Armenian houses of Armenia proper are by no means comfortable. The poorer classes have homes that would hardly be considered fit for cows in America, and in fact the cow lives with the family. The floors are below the level of the roadway, and there are little windows about the size of portholes. Most of the houses are of one story, and it is not uncommon to build a house against the side of a hill, so that there will be no back wall. Stepping down into the house you find the cow stable on one side and on the other the kitchen and the private apartments of the family.

Each room has a stone fireplace, and all the cooking is done with cow dung mixed with straw. There are no tables and few chairs, and it is a curious thing that a large part of the heat of the room comes from the animal heat produced by the cattle in the stable which adjoins the kitchen. The houses of the wealthy and middle class of Armenians are more comfortable, and in the big Turkish cities you will find Armenians occupying palaces. In the country, however, they have few of the comforts of Christendom, and the chief furniture consists of a divan running around three sides of the room covered with Persian rugs and resting on a carpet of gray felt.—Frank G. Carpenter in National Tribune.

How to Water a Horse.

Feed the horse regularly, giving him an even quantity. Do not water him on top of his dinner till he is fall as a barrel and then drive him off at a smart gait while his insides are churned into a malt house pressure, ready by effervescence to burst. Give a horse sparingly of water on the road. Many ladies seem to think it "fun to see him drink" at a wayside trough till he is ready to drop. Be careful of the wayside "gift of humanity," the stone trough. If the horse has been a long time on the road, it is kind to allow him to dip his lips in the cooling water and swallow two or three mouthfuls, but no more, unless you wish to "founder" him, that is, make him unsound in his forelegs for life. You may even kill him, if the water comes from a very cold spring. Do the watering mostly at home is my rule.—New York Weekly.

Calling the House Roll.

It is the custom for the clerk calling the roll to prefix the word "Mister" to each name, but before he has gone far he begins to retrench his expense of vocal powers. This leads to some strange combinations of sound. In the beginning he calls "Mr. Abbett," "Mr. Adams," "Mr. Alderson," and a few more distinctly enough, but by the time he reaches the C's he begins to telescope the title, and calls "M'ster Cannon," "M'ster Carter," and so on. When he has gone a little further he drops off some more, and it becomes "'ster Fitch," "'ster Flower," "'ster Gear," etc. This holds holds out pretty well into the H's, but at last the two words become one, and "Mr. Hopkins" and "Mr. Houk" sound like "Stropkins" and "Stronk." Down in the M's it undergoes another change. The sound of the "r" is lost, and "Mr. Mason," "Mr. McAdoo" and "Mr. Morrow" become "Stumason," "Stumacadoo" and "Stumorrow." This goes on through the O's and the P's, "Mr. Oates" being "Stoates" and "Mr. Peel" coming out "Stupheel." In the R's it shifts a little, and "Mr. Ray" becomes "Stray," while "Mr. Rife" is "Strife."—Washington Post.

ORDER FIXING TIME AND PLACE FOR HEARIN PETITION FOR SALE OF PERSONAL PROPERTY AND REAL ESTATE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of Charles D. Begole deceased.

IT APPEARING TO THE COURT, BY THE petition this day presented and filed by Thomas Parker, the Administrator of the Estate of Charles D. Begole, deceased, praying for an order of sale of the personal property and real estate of said estate, that it is necessary to sell the said personal property, and the whole of the real estate, or a portion of it, to pay the debts outstanding against the deceased, and the debts, expenses and charges of administration.

It is therefore ordered by the said Court that all persons interested in the estate of said deceased, appear before the said Superior Court on Tuesday, the 24th day of March, 1891, at ten o'clock in the forenoon of said day, at the Court-room of said Court, at the Court-house, in the town of Independence, in said county, to show cause why an order should not be granted to the said Administrator to sell the personal property and the whole or so much of the real estate of said deceased as shall be necessary; and that a copy of this order be published at least four successive weeks in the INYO INDEPENDENT, a newspaper printed and published in said county.

GEO. M. GILL.
Judge of the Superior Court.

Dated February 18th, 1891.

Estate of Thomas Parker, deceased—Filed petition for probate of will.

Estate of John Mullane, deceased—Filed petition for sale of real estate and personal property.

MARRIED.

McLEAN—WIMBERLY—At Independence, March 17th, 1891, at the parlors of the Norman House, by Rev. H. J. Winsor Mr. Neil McLean and Miss Laurie Wimberly.

DIED.

PARKER—At Independence, March 13th, Thomas Parker, aged 84 years and 5 months.

DIERKSON—At Lone Pine, March 18th, Peter Dierkson, aged about 65 years.

Maud S. will be bred to Ansel, by Electioneer.

John Dormer has sold his interest in the Stockton *Republican*.

Paul Myrtengreen is in charge of the Palace saloon at Keeler.

Jake Miller has been rusticating at Big Pine during the past week.

Mr. and Mrs. N. E. Conklin have returned to their ranch at Black Rock.

Captain J. D. Channell has been visiting at Independence during the week.

There was a sudden snow squall Wednesday evening lasting about an hour.

John Anton came up from Keeler last Tuesday morning and returned next day.

Three car-loads of ore and a car-load of marble went north last Tuesday morning.

Mr. J. Willett is steadily recovering from his recent illness and will soon be around again.

Jack Smith who killed Percy Williams at Fresno last fall has been convicted of manslaughter.

The *Index* evidently didn't know there was a ball at Keeler in celebration of St. Patrick's Day.

Silver and lead are again rising. Lead quotations are considerably higher than two weeks ago.

Dan Williams has been in poor health for some time past and has gone on a visit to Olancha to recuperate.

There will be a lively competition in the colt races this year. Several youngsters are already being handled.

L. J. Rose Jr. and Fred Holbert passed through town last Tuesday on the way to Ventura with a band of beef cattle.

Neil McLean has joined the roll of Benedicts. "Sidy" and his estimable wife have our heartiest congratulations.

Frank Fitzgerald went north on Thursday morning on his way to San Francisco. He expects to remain about two weeks.

R. Love and T. F. A. Connelly were down from Bishop early in the week to attend a meeting of the Fair Directors.

Now that it has been decided to hold the Fair at Bishop why not have a grand 4th of July celebration at Independence.

Pat Downs has been very ill for a week past, and as yet has made no improvement. No serious result, however, is apprehended.

L. A. Anger intends starting for Mojave in a few days with a load of passengers. He will bring back with him a fine lot of rooted grape vines.

Supervisor Steward was down from Big Pine to attend the special meeting on Monday. He has about recovered from his late attack of rheumatism.

Jake Kilrain succeeded in tiring Godfrey out at the end of the forty-third round. The fight occurred in the California Club, San Francisco, last Friday evening.

Mrs. Celayo died of consumption at Lone Pine last Friday and was buried Sunday. She possessed a very amiable disposition and leaves many friends to mourn her loss.

It is reported that there are seven entries for the trotting race at Bishop on the 4th of July. Scott's horse, one of Birchim's and Young's Truckee Jr. being among the number.

Peter Dierkson died at Lone Pine Wednesday night, and was buried to-day. He was an old resident of Lone Pine, having followed the business of shoemaker there for many years.

Dead Celestials.

Last Tuesday morning an old Chinaman known as "Doc" died at Independence and was buried at the Chinese cemetery below town the same day. On Wednesday night another Chinaman known as "Charley" died and was buried to-day. Charley leaves a wife to mourn his death, and on visiting the house yesterday she was found weeping bitterly. On the floor a new piece of matting was spread, and on this the deceased was laid out, the body being covered with white linen. The eyes were open, giving the corpse a life-like appearance. The lips were drawn away from the teeth, between which a four-bit piece was clenched. A tub of earth was placed at his feet, and in it were stuck a number of burning punks. Arranged in a half circle around the tub were dishes of food and Chinese dainties. His shoes were placed beside him. Presently a Chinaman covered the eyes with small pieces of brown paper apparently wet with some solution and spread a large red silk handkerchief over the face. He stated that the dead man was forty-six years old, that he had been ailing for some time, but that a very severe cold had hastened his death. The custom of placing a coin in the mouth of the departed was practiced by the Greeks, who believed that it was collected by Charon when he ferried the manes across the river Styx. As the Chinese are the oldest race, the custom probably originated with them.

St Patrick's Day at Keeler.

In point of attendance the ball given at Keeler by Mr. and Mrs. John Barnes was the most successful yet had. The day was very pleasant, and a large number of people drove over from Lone Pine. There was a car filled with those who went from Independence and Lone Pine by rail. Dancing commenced at 9 o'clock and was continued untill 12, when an intermission of 2 hours was taken for supper. The dining room was again cleared, and the light fantastic was continued until 5 o'clock of "St. Patrick's Day in the morning." Music was rendered by the Harmony Orchestra of Independence. Mr Cameron gave complete satisfaction calling, and under the management of Mr. Frank Fitzgerald as floor director the whole affair passed off in a quiet and orderly manner. The thoroughly good time enjoyed by the participants will be the strongest inducement for them to attend next year.

A Bright Outlook.

Candelaria still continues to be a thrifty mining camp. The monthly payroll amounts to sixty thousand dollars. There is sufficient ore in sight in the Mt. Diablo to supply the milling capacity for a long time. There is a large force of men constantly employed at the Holmes. An English Company erected a leaching plant last fall and is working the old dumps so profitably that it is expected the work will be considerably increased this spring. A new pipe line will also be laid, the present line being inadequate to supply the demand. The water is carried a distance of twenty-eight miles. Captain Channell, Superintendent of the Princess, states that his company is prospecting and opening up new ground but not taking out any ore at present. The future of Candelaria is very bright a fact of much interest to the people of this Valley, as most of our produce can be marketed there.

Correspondence.

ED. INDEPENDENT—*Dear Sir:* Last Saturday night after the Good Templars had adjourned, and as the members were passing through town on their way home, a crowd of drunken hoodlums congregated on the porch of the Big Pine Hotel, "making night hideous" by their yells and foul language, no doubt intended for the ears of the Good Templars. They went so far with their insults as to place an obstruction across the road, which might have resulted seriously, as a good many persons had to pass that way. But fortunately, no one was hurt. These same hoodlums have upon various occasions attempted to interrupt the meetings of the Good Templars. These scoundrels should be brought to justice. They are a disgrace to the community they live in, and a curse to the world in general. Yours etc.,

GOOD TEMPLAR.

Directors' Meeting

A meeting of the Fair Directors was held at Independence last Tuesday. Officers were elected for the ensuing term as follows: President, E. Robinson; Secretary, C. W. Crag; Treasurer, Henry Rume. It was determined to hold the Fair this year at Bishop, the date being not yet fixed. All sectional difference should now be laid aside, and the people of the entire county unite to make the Fair a complete success.

We have received a copy of the last edition of Bishop's A. B. C. Guide, To the traveling public the book is invaluable as it gives complete information as to routes of travel, fare and time tables. It also contains valuable information for all business men. It is issued monthly, subscription price, $2.50 per annum. Address, 429 Montgomery street, San Francisco.

By a recent decision of Judge Wallace the famous resort in San Francisco known as Woodward's Gardens is to be sold. The grounds will be divided, and thus one of the old-time pupular institutions of California will disappear.

Mr. Harry Boland sent to San Francisco and secured a pretty decoration for the Cerro Gordo delegation to the St. Patrick's festivities. It was a little green bird neatly mounted and makes a pretty souvenir of the occasion.

Now is a golden opportunity to secure the finest piece of land under the Eastside canal. For the quality of it intending purchasers are referred to Superintendent McIver and the *Index*. Only six dollars an acre.

The Board of Supervisors met in special session last Monday and canvassed the returns of the Supervisor election in the second district. Mr. George Watterson was declared elected by a handsome majority.

Should the Fair Directors conclude to hang up a sufficient purse for a half mile and repeat, there will be a very exciting race between Pickpocket, Sagebrush and Hayseed. Which one would sell favorite?

Judge Hannah is making constant improvement on his Fish Springs property, in the way of fencing and putting out orchards. In a few years it will be about the best fruit farm in the Valley.

W. H. GEORGE, M. D.,
Physician and Surgeon,
Bishop Creek, Cal.,

Offers his professional services to the people of Bishop Creek and vicinity. Office and residence opposite Andrew Clark's.

PROBATE NOTICE

Notice for publication of time appointed for proving will, etc.

In the matter of the Estate of Thomas Parker deceased.

Notice is hereby given that Saturday, the 4th day of April A. D. 1891, at ten o'clock a. m. of said day, at the Court-Room of said Court, at the town of Independence, in the County of Inyo, State of California, has been appointed as the time and place for proving the will of said Thomas Parker, deceased and for hearing the application of John Shepherd and S. G. Gregg for the issuance to them of letters testamentary thereon.

J. N. YANDELL, Clerk.
P. H. MACK, Attorney for Petitioner.
Dated March 19th, 1891.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE AND PERSONAL PROPERTY SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Mullane deceased.

Order to show cause why an Order of sale of real estate and personal property should not be made.

Richard Hessian Sr. the Executor of the last will and testament of John Mullane, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the real estate and all the personal property of said deceased, for the purposes therein set forth, it is therefore ordered by the Judge of said Court, that all persons interested in the estate of said deceased, appear before the said Superior Court on Saturday, the 18th day of April, 1891 at two o'clock in the afternoon of said day, at the Court room of said Court, at the Court House in the town of Independence, in the said County of Inyo, to show cause why an order should not be granted to the said Executor to sell all of the real estate and all of the personal property of the said deceased. And that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper published and printed in the said County of Inyo.

GEO. M. GILL,
Judge of said Superior Court.
Dated March 19th, 1891.

[ENDORSED.]

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of John Mullane deceased.

Order to show cause why an order of sale of Real Estate and Personal Property should not be made.

Filed March 20th, 1891.

J. N. YANDELL,
Clerk.

ALIAS SUMMONS.

MARY A. BALL, Plaintiff, vs. ROBERT BALL, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Robert Ball, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony now existing between the Plaintiff and Defendant and for costs of suit, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief therein demanded.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 28th day of February, A. D. 1891.

J. N. YANDELL, Clerk.
[SEAL]
P. H. MACK, Attorney for Plaintiff.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOSEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2324 Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and that within 90 days from the date hereof, in pursuance of said section, you fail or refuse to contribute your proportion of said expenditure together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2324.

O. G. FUENTES.

Is always at the disposal of visitors to the Palace Saloon. sept-12 td

The people at the World's Dispensary of Buffalo, N. Y., have a stock-taking time once a year and what do you think they do? Count the number of bottles that've been returned by the men and women who say that Dr. Pierce's Golden Medical Discovery or Dr. Pierce's Favorite Prescription didn't do what they said it would do.

And how many do you think they have to count. One in ten? *Not one in five hundred!*

Here are two remedies—one the Golden Medical Discovery, for regulating and invigorating the liver and purifying the blood; the other, the hope of weakly womanhood, and they've been sold for years, sold by the million bottles; sold under a *positive guarantee*, and not one in five hundred can say:

"It was not the medicine for me!"

And—is there any reason why you should be the one? And—supposing you are what do you lose? *Absolutely nothing!*

"You keep your age well," he said to Miss Oldmaid. "And yet they say a woman cannot keep a secret," she smiled in reply.

AN UNDISPUTED TEST OF MERIT.

A medicine that has been a household remedy for over fifty years and used in that time by more than 150,000,000 persons must have great merit. Such a medicine is found in BRANDRETH'S PILLS. This fact illustrates the value of these pills better than any statement of the proprietors. It will be observed that the dose required to cure is small. One or two pills taken every night for ten or twenty days will cure dyspepsia, costiveness, rheumatism, liver complaint, all female complaints and weaknesses.

BRANDRETH'S PILLS are purely vegetable, absolutely harmless, and safe to take at any time.

Sold in every drug and medicine store, either plain or sugar coated.

He sued for her hand—did the dude—
In a moment exceedingly rash;
And he in turn is being sued,
And she's after ten thousand in cash.

VALUABLE DISCOVERY FOR THE BLIND.

Dr. La Grange wishes to make known his *New Treatment* for the cure of all diseases of the Eye: *—Cataract, Defective Vision, Inflammation*, etc., etc., without Operation or Pain. The remedy can be applied by the patient, and is simple, safe and sure in its effects, strengthening the muscles and nerves of the eye, removing pain almost instantaneously. It is a marvelous discovery and a blessing to the sufferer.

For further particulars address with stamped envelope, R. J. LA GRANGE, M. D., 215 Powell St., third door from Geary, San Francisco, Cal.

Office Hours, 11 till 3.

Larkin—Martens are the most stylish of birds. Gazzam—How so? Larkin—They wear swallow-tails.

DISORDERS WHICH AFFECT THE KIDNEYS

Are among the most formidable known. Diabetes, Bright's disease, gravel and other complaints of the urinary organs are not ordinarily cured in severe cases, but they may be relieved by timely medication. A useful stimulant of the urinary glands has ever been found in Hostetter's Stomach Bitters, a medicine which not only affords the requisite stimulous when they become inactive, but increases their vigor and secretive power. By increasing the activity of the kidneys and bladder, this medicine has the additional effect of expelling from the blood impurities which it is the peculiar office of those organs to eliminate and pass off. The Bitters is also a purifier and strengthener of the bowels, an invigorant of the stomach, and a matchless remedy for biliousness and fever and ague. It counteracts a tendency to premature decay, and sustains and comforts the aged and infirm.

An Unappreciative Wife—Slimmy—Just going out to see a man in death. Mrs. Slimmy—Well, don't look in the mirror.

BEWARE OF OINTMENTS FOR CATARRH THAT CONTAIN MERCURY.

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, and acts directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally, and made in Toledo, Ohio, by F. J. Cheney & Co.

☞Sold by Druggists, price 75c. per bottle.

The barbed-wire men have formed a pool. They prefer that to sitting on their individual fences until they become wealthy.

Did you ever go within a mile of a soap factory? If so you know what material they make soap of. Dobbins' Electric Soap factory is as free from odor as a chair factory. Try it once. Ask your grocer for it. Take no imitation.

Something of an Acrobat—Wooden—Yes, as you say, Miss Smilax' eyes and hair are very fine, but I think her crowning glory is her feet.

CONSUMPTION SURELY CURED.

TO THE EDITOR—Please inform your readers that I have a positive remedy for the above named disease. By its timely use thousands of hopeless cases have been permanently cured. I shall be glad to send two bottles of my remedy free to any of your readers who have consumption if they will send me their express and post-office address. Respectfully,

T. A. SLOCUM M. C., 181 Pearl St., New York.

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

"I am in a hurry because I have Annemie's patterns to do," said Bebee, glad that he spoke of a thing that she knew how to answer. "You see, Annemie's hand shakes, and her eyes are dim, and she pricks the pattern all awry and never perceives it; it would break her heart if one showed her so, but the Baes would not take them as they are; they are of no use at all. So I prick them out myself on fresh paper, and the Baes thinks it is all her doing, and pays her the same money, and she is quite content. And as I carry the patterns to and fro for her, because she cannot walk, it is easy to cheat her like that, and it is no harm to cheat so, you know." He was silent.

"You are a good little girl, Bebee, I can see," he said at last, with a graver sound in his voice. "And who is this Annemie for whom you do so much—an old woman, I suppose?"

"Oh, yes, quite old; incredibly old. Her man was drowned at sea sixty years ago, and she watches for his brig still, night and morning."

"The dog's heart! No doubt he beat her, and had a wife in fifty other ports."

"Oh, no," said Bebee, with a little cry, as though the word against the dead man hurt her. "She has told me so much of him. He was as good as good could be, and loved her so, and between the voyages they were so happy. Surely that must have been sixty years now, and she is so sorry still, and still will not believe that he was drowned."

He looked down on her with a smile that had a certain pity in it.

"Well, yes; there are women like that, I believe. But be very sure, my dear, he beat her. Of the two, one always holds the whip and uses it—the other crouches."

"I do not understand," said Bebee.

"No—but you will."

"I will? When?"

He smiled again.

"Oh—to-morrow, perhaps, or next year—or when Fate fancies."

"Or rather—when I choose," he thought to himself, and let his eyes rest with a certain pleasure on the little feet, that went beside him in the grass, and the pretty fair bosom that showed ever and again, as the frills of her linen bodice were blown back by the wind and her own quick motion.

Bebee looked also up at him; he was very handsome, and looked so to her, after the broad blunt characterless faces of the Walloon peasantry around her. He walked with an easy grace, he was clad in picture like velvets, he had a beautiful poetic head, and eyes like deep brown waters, and a face like one of Jordaen's or Rembrandt's cavaliers in the galleries where she used to steal in of a Sunday, and look up at the paintings, and dream of what that world could be in which those people had lived.

"You are of the people of Rubes' country, are you not?" she asked him.

"Of what country, my dear?"

"Of the people that live in the gold frames," said Bebee, quite seriously. "In the galleries, you know. I know a charwoman that scrubs the floors of the Arenberg palace, and she lets me in sometimes to look; and you are just like those great gentlemen in the gold frames, only you have not a hawk and a sword, and they always have. I used to wonder where they came from, for they are not like any of us one bit, and the charwoman—she is Lisa Dredel, and lives in the street of the Pot d'Etain—always said, 'Dear heart, they all belong to Rubes' land—we never see their like nowadays.' But you must come out of Rubes' land, at least, I think so, do you not?"

He caught her meaning; he knew that Rubes was the homely abbreviation of Rubens that all the Netherlanders used, and he guessed the idea that was reality to this little lonely, fanciful mind.

"Perhaps I do," he answered her with a smile, for it was not worth his while to disabuse her thoughts of any imagination that glorified him to her. "Do you not want to see Rubes' world, little one? To see the gold and the grandeur, and the glitter of it all?—never to toil or get tired?—always to move in a pageant?—always to live like the hawks in the paintings you talk of, with silver bells hung round you, and a hood all sewn with pearls?"

"No," said Bebee, simply. "I should like to see it—just to see it, as one looks through a grating into the king's grape houses here. But I should not like to live in it. I love my hut and the starling, and the chickens, and what would the garden do without me?—and the children, and the old Annemie? I could not anyhow, anywhere be any happier than I am. There is only one thing I wish."

"And what is that?"

"To know something; not to be so ignorant. Just look! I can read a little, it is true; my Hours, and the letters, and when Kreks brings in a newspaper I can read a little of it—not much. I know French well, because Antoine was French himself and never did talk Flemish to me; and they, being Netherlanders, cannot, of course, read the newspapers at all, and so think it very wonderful indeed in me. But what I want is to know things, to know all about what was before ever I was living. St. Gudule, now—they say it was built hundreds of years before, and Rubes, again—they say he was a painter king in Antwerpen before the oldest, oldest woman like Annemie ever began to count time. I am sure books will tell you all those things, because I see the students coming and going with them; and when I saw once the millions of books in the Rue du Musee I asked the keeper what use they were for, and he said, 'To make men wise, my dear.' But Gringoire Bac, the cobbler, who was with me—it was a fete day—Bac, he said, 'Do not you believe that, Bebee; they only muddle folks' brains; for one book tells them one thing and another book another, and so on till they are dazed with all the contrary lying; and if you see a bookish man, be sure you see a very poor creature, who could not hoe a patch, or kill a pig, or stitch an upper leather were it ever so.' But I do not believe that Bac said right. Did he?"

"I am not sure. On the whole, I think it is the truest remark on literature I have ever heard, and one that shows great judgment in Bac. Well?"

"Well—sometimes, you know," said Bebee, not understanding his answer, but pursuing her thoughts confidentially; "sometimes I talk like this to the neighbors, and they laugh at me. Because Mere Krebs says that when one knows how to spin and sweep and make bread and say one's prayers and milk a goat or a cow it is all a woman wants to know this side of heaven. But for me, I cannot help it—when I look at those windows in the cathedral, or at those beautiful twisted little spires that are all over our Hotel de Ville, I want to know who the men were that made them—what they did and thought—how they looked and spoke—how they learned to shape stone into leaves and grasses like that—how they could image all those angel faces on the glass. When I go alone in the quite early morning or at night when it is still—sometimes in winter I have to stay till it is dark over the lace—I hear their feet come after me and they whisper to me close, 'Look what beautiful things we have done, Bebee, and you all forget us quite. We did what never will die, but our names are as dead as the stones.' And then I am so sorry for them and ashamed. And I want to know more. Can you tell me?"

He looked at her earnestly; her eyes were shining, her cheeks were warm, her little mouth was tremulous with eagerness.

"Did any one ever speak to you in that way?" he asked her.

"No," she answered him. "It comes into my head of itself. Sometimes I think the cathedral angels put it there. For the angels must be tired, you know, always pointing to God and always seeing men turn away. I used to tell Antoine sometimes. But he used to shake his head and say that it was no use thinking; most likely St. Gudule and St. Michael had set the church down in the night all ready made, why not? God made the trees, and they were more wonderful, he thought, for his part. And so perhaps, they are, but that is no answer. And I do want to know. I want some one who will tell me—and if you come out of Rubes' country as I think, no doubt you know everything, or remember it."

He smiled.

"The free pass to Rubes' country lies in books, pretty one. Shall I give you some?—nay, lend them, I mean, since giving you are too willful to hear of without offense. You can read, you said?"

Bebee's eyes glowed as they lifted themselves to his.

"I can read—not very fast, but that would come with doing it more and more, I think, just as spinning does—one knots the thread and breaks it about a million times before one learns to spin as fine as cobwebs. I have read the stories of St. Anne, and of St. Catherine, and of St Luven fifty times, but they are all the books that Father Francis has and no one else has any among us."

"Very well. You shall have books of mine, easy ones first; and then those that are more serious. But what time will you have? You do so much; you are like a little golden bee."

Bebee laughed happily.

"Oh! give me the books and I will find the time. It is light so early now. That gives one so many hours. In winter one has so few one must lie in bed, because to buy a candle you know one cannot afford except of course a taper now and then, as one's duty is, for our Lady or for the dead. And you will really, really, lend me books?"

"Really—I will. Yes. I will bring you one to the Grande Place to-morrow, or meet you on your road there with it. Do you know what poetry is, Bebee?"

"No."

"But your flowers talk to you?"

"Ah! always. But then no one else hears them ever but me, and so no one else ever believes."

"Well—poets are folks who hear the flowers talk as you do, and the trees, and the seas, and the beasts, and even the stones; but no one else ever hears these things, and so, when the poets write them out, the rest of the world say, 'That is very fine, no doubt, but only good for dreamers; it will bake no bread.' I will give you some poetry—for I think you care more about dreams than about bread."

"I do not know," said Bebee; and she did not know, for her dreams, like her youth, and her innocence, and her simplicity, and her strength, were all unconscious of themselves, as such things must be to be pure and true at all.

Bebee had grown up straight, and clean, and fragrant, and joyous as one of her own carnations, but she knew herself no more than the carnation knows its color and its root.

"No, you do not know," said he, with a sort of pity; and thought within himself, was it worth while to let her know?

If she did not know, these vague aspirations and imaginations would drop off from her with the years of her early youth, as the lime flowers drop downward with the summer heats. She would forget them. They would linger a little in her head, and perhaps, always wake at some sunset hour or some angelus chime, but not to trouble her. Only to make her cradle song a little sadder and softer than most women's was. Unfed, they would sink away and bear no blossom.

She would grow into a simple, hardy, hard working, God fearing Flemish woman like the rest. She would marry, no doubt, some time, and rear her children honestly and well, and sit in the market stall every day, and spin and sew, and dig and wash, and sweep, and brave bad weather, and be content with poor food to the end of her harmless and laborious days—poor little Bebee!

He saw her so clearly as she would be—if he let her alone.

A little taller, a little broader, a little browner, less sweet of voice, less soft of skin, less flower like in face, having learned to think only as her neighbors thought, of price of wood and cost of bread, laboring cheerily but hardly from daybreak to nightfall to fill hungry mouths, forgetting all things except the little curly heads clustered round her soup pot, and the year-old lips sucking at her breasts.

A blameless life, an eventless life, a life as clear as the dewdrop, and as colorless, a life opening, passing, ending in the little green wooded lane, by the bit of water where the swans made their nests under the willows; a life like the life of millions; a little purer, a little brighter, a little more tender, perhaps, than those lives usually are, but otherwise as like them as one ear of barley is like another as it rises from the soil, and blows in the wind, and turns brown in the strong summer sun, and then goes down to the sod again under the sickle.

He saw her just as she would be—if he let her alone.

But should he leave her alone?

He cared nothing, only her eyes had such a pretty, frank, innocent look like a bird's in them, and she had been so brave and bold with him about those silken stockings; and this little ignorant, dreamful mind of hers was so like a blush rosebud, which looks so close shut, and so sweet smelling, and so tempting fold within fold, that a child will pull it open, forgetful that he will spoil it forever from being a full grown rose, and that he will let the dust, and the sun, and the bee into its tender bosom—and men are true children, and women are their rosebuds.

Thinking only of keeping well with this strange and beautiful wayfarer from that unknown paradise of Rubes' country, Bebee lifted up the vine leaves of her basket.

"I took a flower for you today, but it is dead. Look—to-morrow, if you will be there, you shall have the best in all the garden."

"You wish to see me again then?" he asked her. Bebee looked at him with troubled eyes, but with a sweet, frank faith that had no hesitation in it.

"Yes! you are not like anything I ever knew, and if you will only help me to learn a little. Sometimes I think I am not stupid, only ignorant—but I cannot be sure unless I try."

He smiled. It was listlessly amused, the day before he had tempted the child merely because she was pretty, and to tempt her in that way seemed the natural course of things, but now there was something in her that touched him differently; the end would be the same, but he would change the means.

The sun had set. There was a low, dull red glow still on the far edge of the plains—that was all. In the distant cottages little lights were twinkling. The path grew dark.

"I will go away and let her alone," he thought. "Poor little soul! it would give itself lavishly, it would never be bought. I will let it alone; the mind will go to sleep and the body will keep healthy and strong and pure, as people call it. It would be a pity to play with both a day, and then throw them away, as the boy threw the pear blossom. She is a little clod of earth that has field flowers growing in it. I will let her alone, the flowers under the plow in due course will die, and she will be content among the other clods—if I let her alone."

At that moment there went across the dark fields, against the dusky red sky, a young man with a pile of brushwood on his back, and a hatchet in his hand.

"You are late, Bebee," he called to her in Flemish, and scowled at the stranger by her side.

"A good looking lad—who is it?" said her companion.

"That is Jeannot, the son of old Sophie," she answered him. "He is so good—oh, so good, you cannot think; he keeps his mother and three little sisters, and works so very, very hard in the forest, and yet he often finds time to dig my garden for me, and he chops all my wood in the winter."

They had come to where the road goes up by the king's summer palace. They were under great hanging beeches and limes. There was a high gray wall, and over it the blossoming fruit boughs hung. In a ditch full of long grass little kids bleated by their mothers. Away on the left went the green fields of colza, and beetroot, and trefoil, with big forest trees here and there in the midst, and, against the blue low line of the far horizon, red mill sails, and gray church spires, dreamy plaintive bells far away somewhere were ringing the sad Flemish carillon.

He paused and looked at her.

"I must bid you good night, Bebee—you are near your home now."

She paused too and looked at him.

"But I shall see you to-morrow?"

There was the wistful, eager, anxious unconsciousness of appeal as when the night before she had asked him if he were angry.

He hesitated a moment. If he said no, and went away out of the city wherever his listless and changeful whim called him, he knew how it would be with her: he knew what her life would be as surely as he knew the peach would come out of the peach flower rosy on the wall there, life in the little hut; among the neighbors; sleepy and safe and soulless—if he let her alone.

If he stayed and saw her on the morrow he knew too, the end as surely as he knew that the branch of white pear blossom which in carelessness he had knocked down with a stone on the grass yonder, would fade in the night and would never bring forth its sweet, simple fruit in the sunshine.

To leave the peach flower to come to maturity and be plucked by a peasant—or to pull down the pear blossom and rifle the buds?

Carelessly and languidly he balanced the question with himself, whilst Bebee, forgetful of the lace patterns and the flight of the hours, stood looking at him with anxious and pleading eyes, thinking only—was he angry again, or would he really bring her the books and make her wise, and let her know the stories of the past?

"Shall I see you to-morrow?" she said wistfully.

Should she?—if he left the peach blossom safe on the wall, Jeannot the wood cutter would come by and by and gather the fruit.

If he left the clod of earth in its pasture with all its daisies untouched, this black browed young peasant would cut it round with his hatchet and carry it to his wicker cage, that the homely brown lark of his love might sing to it some stupid wood note under a cottage eave.

The sight of the strong young forester going over the darkened fields against the dull red skies was a feather that suffices to sway to one side a balance that hangs on a hair.

He had been inclined to leave her alone when he saw in his fancy the clean, simple, mindless, honest life that her fanciful girlhood would settle down into as time should go on. But when in the figure of the woodman there was painted visibly on the dusky sky that end for her which he had foreseen, he was not indifferent to it; he resented it; he was stirred to a vague desire to render it impossible.

If Jeannot had not gone by across the fields he would have left her and let her alone from that night thenceforward; as it was—

"Good night, Bebee," he said to her. "To-morrow I will finish the Broodhuis and bring you your first book. Do not dream too much or you will prick your lace patterns all awry. Good night, pretty one."

Then he turned and went back through the green dim lanes to the city.

Bebee stood a moment looking after him, with a happy smile, then she picked up the fallen peach bough and ran home as fast as her feet would take her.

That night she worked very late watering her flowers, and trimming them, and then ironing out a little clean white cap for the morrow, and then sitting down under the open lattice to prick out all old Annemie's designs by the strong light of the full moon that flooded her hut with its radiance.

But she sang all the time that she worked, and the gay, pretty, wordless songs floated across the water and across the fields, and woke some old people in their beds as they lay with their windows open, and they turned and crossed themselves, and said, "Dear heart!—this is the eve of the ascension, and the angels are so near we hear them."

But it was no angel, only the thing that is nearer heaven than anything else—a little human heart that is happy and innocent.

Bebee had only one sorrow that night. The peach blossoms were all dead—and no care could call them back even for an hour's blooming.

"He did not think when he struck them down," she said to herself, regretfully.

(TO BE CONTINUED.)

They've Lost Millions.

A thief undiscovered belongs as much to the outfit of a phenomenally famous singer as her indispensable rouge pot. The lack of a perfect shape does not signify, but the lack of a thief would be ruin. Adelina Patti has been robbed by night and by day, in Europe and America, on shore and at sea, in hotels and on railway trains. Carlotta Patti and Christine Nilsson and—but why mention names.

An incredible amount of diamonds and jewels have disappeared in this way without ever turning up again. But the lady artists are forgiving. They do not prosecute the thieves. They do not go to the police. They do not offer rewards. Perhaps they know that the gold in their throats can easily be coined, and that their rippling notes can soon be changed into rows of pearls. They are easy going and soon forget their loss. A royal present to a lady artist which does not get stolen has missed its object, and cases have indeed occurred where presents which were never given were stolen.—Pall Mall Gazette.

Double Sashes for Railway Cars.

In consequence of the decided addition to the comfort of travelers of double sashes in passenger cars by reason of the prevention of the admission of cold air in winter and dust in summer several railway companies have decided to use double windows altogether in the future, and this conclusion has probably been hastened by the fact that many of their best day coaches and chair cars rival special cars in the richness of their plushes and interior decorations, and they cannot afford to have such fittings rapidly destroyed by the dust.

The comparative ease with which a car fitted with double windows can be heated in winter is also a consideration. They not only prevent cold air leaking in where it is not wanted, but they also interpose a layer of comparatively still air between the warm air in the car and the cold atmosphere outside, thereby preventing the loss of considerable heat by conduction and convection.—New Orleans Picayune.

To what do I attribute my success in burlesque opera? Well, I imagine that it is principally due to the manner in which I work. I like the stage and love to act. From the moment I appear I enter with zest into the fun of the performance, and the humor is all from the heart. And what comes from the heart is always convincing.—Francis Wilson in Kate Field's Washington.

The floating island in Sadawga lake, in the town of Whittingham, Vt., is one of the most remarkable freaks of nature and one of the greatest curiosities in the world. The island contains over a hundred acres, and it actually floats upon the top of the water.

A THRILLING EXPERIENCE.

Remarkable Statement of Personal Danger and Providential Escape.

The following story—which is attracting wide attention from the press—is so remarkable that we cannot excuse ourselves if we do not lay it before our readers, entire.

To the Editor Rochester (N. Y.) Democrat:

SIR: On the first day of June, 1881, I lay at my residence in this city surrounded by my friends and waiting for death. Heaven only knows the agony I then endured, for words can never describe it. And yet, if a few years previous any one had told me that I was to be brought so low, and by so terrible a disease, I should have scoffed at the idea. I had always been uncommonly strong and healthy, and weighed over 200 pounds and hardly knew, in my own experience, what pain or sickness were. Very many people who will read this statement realize at times that they are unusually tired and cannot account for it. They feel dull pains in various parts of the body and do not understand why. Or they are exceedingly hungry one day and entirely without appetite the next. This was just the way I felt when the relentless malady which had fastened itself upon me first began. Still I thought nothing of it; that probably I had taken a cold which would soon pass away. Shortly after this I noticed a heavy, and, at times, neuralgic, pain in one side of my head, but as it would come one day and be gone the next, I paid little attention to it. Then my stomach would get out of order and my food often failed to digest, causing at times great inconvenience. Yet, even as a physician, I did not think that these things meant anything serious. I fancied I was suffering from malaria and doctored myself accordingly. But I got no better. I next noticed a peculiar color and odor about the fluids I was passing—also that there were large quantities one day and very little the next, and that a persistent froth and scum appeared on the surface, and a sediment settled. And yet I did not realize my danger, for, indeed, seeing these symptoms continually, I finally became accustomed to them, and my suspicion was wholly disarmed by the fact that I had no pain in the affected organs or in their vicinity. Why I should have been so blind I cannot understand.

I consulted the best medical skill in the land. I visited all the famed mineral springs in America and traveled from Maine to California. Still I grew worse. No two physicians agreed as to my malady. One said I was troubled with spinal irritation; another, dyspepsia; another, heart disease; another general debility; another, congestion of the base of the brain; and so on through a long list of common diseases, the symptoms of many of which I really had. In this way several years passed, during which time I was steadily growing worse. My condition had really become pitiable. The slight symptoms I had at first experienced were developed into terrible and constant disorders. My weight had been reduced from 207 to 130 pounds. My life was a burden to myself and friends. I could retain no food on my stomach, and lived wholly by injections. I was a living mass of pain. My pulse was uncontrollable. In my agony I frequently fell to the floor and clutched the carpet, and prayed for death. Morphine had little or no effect in deadening the pain. For six days and nights I had the death-premonitory hiccoughs constantly. My water was filled with tube-casts and albumen. I was struggling with Bright's Disease of the kidneys in its last stages.

While suffering thus I received a call from my pastor, the Rev. Dr. Foote, at that time rector of St. Paul's Episcopal Church, of this city. I felt that it was our last interview, but in the course of conversation Dr. Foote detailed to me the many remarkable cures of cases like my own which had come under his observation. As a practicing physician and a graduate of the schools, I derided the idea of any medicine outside the regular channels being in the least beneficial. So solicitous, however, was Dr. Foote, that I finally promised I would waive my prejudice. I began its use on the first day of June, 1881, and took it according to directions. At first it sickened me; but this I thought was a good sign for one in my debilitated condition. I continued to take it; the sickening sensation departed and I was finally able to retain food upon my stomach. In a few days I noticed a decided change for the better, as also did my wife and friends. My hiccoughs ceased and I experienced less pain than formerly. I was so rejoiced at this improved condition that, upon what I had believed but a few days before was my dying bed, I vowed, in the presence of my family and friends, should I recover, I would both publicly and privately make known this remedy for the good of humanity, wherever and whenever I had an opportunity, and this letter is in fulfillment of that vow. My improvement was constant from that time, and in less than three months I had gained 26 pounds in flesh, became entirely free from pain and I believe I owe my life and present condition wholly to Warner's Safe Cure, the remedy which I used.

Since my recovery I have thoroughly re-investigated the subject of kidney difficulties and Bright's disease, and the truths developed are astounding. I therefore state, deliberately, and as a physician, that I believe *more than one-half the deaths which occur in America are caused by Bright's disease of the kidneys.* This may sound like a rash statement, but I am prepared to fully verify it. Bright's disease has no distinctive features of its own, (indeed, it often developes without any pain whatever in the kidneys or their vicinity) but has the symptoms of nearly every other common complaint. Hundreds of people die daily, whose burials are authorized by a physician's certificate as occurring from "Heart disease," "Apoplexy," "Paralysis," "Spinal Complaint," "Rheumatism," "Pneumonia," and other common complaints, when in reality it is from Bright's disease of the kidneys. Few physicians, and fewer people, realize the extent of this disease or its dangerous and insidious nature. It steals into the system like a thief, manifests its presence if at all by the commonest symptoms and fastens itself in the constitution before the victim is aware of it. It is nearly as hereditary as consumption, quite as common and fully as fatal. Entire families, inheriting it from their ancestors, have died, and yet none of the number knew or realized the mysterious power which was removing them. Instead of common symptoms it often shows none whatever, but brings death suddenly, from convulsions, apoplexy, or heart disease. As one who has suffered, and knows by bitter experience what he says, I implore everyone who reads these words not to neglect the slightest symptoms of kidney difficulty. No one can afford to hazard such chances.

I make the foregoing statements based upon facts which I can substantiate to the letter. The welfare of those who may possibly be sufferers such as I was, is an ample inducement for me to take the step I have, and if I can successfully warn others from the dangerous path in which I once walked, I am willing to endure all professional and personal consequences.

ROCHESTER, N. Y., Dec. 30.

PILES! PILES! PILES!

Dr. Williams' Indian Pile Ointment will cure Blind, Bleeding, and Itching Piles when all other Ointments have failed. It absorbs the tumors, allays the itching at once, acts as a poultice, gives instant relief. Dr. Williams' Indian Pile Ointment is prepared only for Piles and Itching of the private parts, and nothing else. Every box is warranted. Sold by Druggists, or sent by mail on receipt of price, 50c. and $1.00 per box. WILLIAMS M'F'G CO., Props., Cleveland, O.

Passenger—Is this ticket good to stop off? Conductor—Yes'm. But it won't be good to get on again.

Dr. Wallace Ely has removed his offices to 215 Powell St., San Francisco, Cal., where he continues to give special attention to Kidneys, Bladder, Prostate Gland and all diseases arising therefrom. Diabetes and Bright's Disease treated according to the latest approved method. Most cases can be treated successfully by correspondence. Consultations daily from 10 A. M. to 4 P. M. WALLACE ELY, M. D., 215 Powell St., 3 doors from Geary St., San Francisco, Cal.

Judge—Hem! Your verdict seems decidedly mixed. Foreman of the Jury—Yes, your honor. It's in accordance with your evidence.

The entire book is ably written and gives trusty information for everyone growing fruit of any sort or kind. Sent free by Stark Bros., Louisiana, Mo.—*Orange Judd Farmer.*

The Indians are often more skinned against than skinning.

"Brown's Bronchial Troches" will relieve Bronchitis, Asthma, and Throat Diseases.

"He got into financial straits, did he not?" "Worse than that. They were crookeds."

Try Germea for Breakfast.

ONE ENJOYS

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation permanently. For sale in 50c and $1 bottles by all druggists.

SCOTT'S EMULSION

Of Pure Cod Liver Oil with Hypophosphites Of Lime and Soda.

There are emulsions and emulsions, and there is still much skimmed milk which masquerades as cream. Try as they will many manufacturers cannot so disguise their cod liver oil as to make it palatable to sensitive stomachs. Scott's Emulsion of PURE NORWEGIAN COD LIVER OIL, combined with Hypophosphites is almost as palatable as milk. For this reason as well as for the fact of the stimulating qualities of the Hypophosphites, Physicians frequently prescribe it in cases of

CONSUMPTION,

SCROFULA, BRONCHITIS and CHRONIC COUGH or SEVERE COLD.

All Druggists sell it, but be sure you get the genuine, as there are poor imitations.

THE COWBOY KNOWS!

Trying to hold a drove of cattle together in a drenching rain means an amount of exposure which few can withstand without serious results. If sickness does not follow, it will be found that such hardship usually brings on rheumatism and similar complaints. At such times a "Fish Brand Slicker" is worth its weight in gold, and is invaluable to any one exposed to stormy weather. For all saddle uses, you want a Pommel Slicker, which keeps the entire saddle, pommel, and cantle dry, and completely envelopes the rider from head to foot. *He can't get wet, whatever the weather.* And, besides keeping him dry, it keeps him warm. Every range rider has one. Why shouldn't you? Beware of worthless imitations; every garment stamped with "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

ALASKA'S DEAD CITY.

Story of a Deserted and Ice Covered Town.

THE TOUGH YARN OF AN ALASKA MINER

He Claims to Have Seen the Original of the Muir Glacier Mirage.

Since the story of the Muir glacier mirage first became known your correspondent has made every effort to get substantial news concerning it, but beyond the statements of Professor Willoughby, and the word of one or two who had seen the mirage, nothing tangible could be obtained. By the steamer Eider, which arrived recently at Victoria from the north, came a miner, who left the vessel at that port, and did not go on to San Francisco, as he at first intended. From this miner, who is a very intelligent man, a most remarkable story was obtained, and the first description of the Silent City is here given.

George H. Kershon is the name given by the narrator of the tale.

Kershon is a hardy looking man, with a well knit frame, indicative of an ability to withstand physical hardship, while his clear, blue eyes are a surety that whatever he undertakes he will carry through.

"Yes," he said, "I think I am the first white man who ever gazed on the frozen city of the north. In the summer of 1888 I was one of a party of six who left here to go north prospecting. Of the other five I know not where they are. We took the steamer to Juneau, where we left her, buying a small sloop to take our kits up to Yukon. After several weeks of awful toil we reached a fork.

"I was for going up this fork and prospecting, but the other five were against it; but as I was determined to go I left the party, engaged an Indian canoe, with two bucks, and started up off this unknown fork. We had a terrible time. The stream narrowed in between high cliffs and shot with dizzy swiftness down the gulches, making it necessary to tow the canoe by means of a line from the banks, two doing this while the third man rested.

"After that it was a bit easier. The river broadened out and the country was more level. The banks were well wooded and game was plentiful. We kept on like this, always going north, when after six weeks a range of mountains were sighted. At length we reached the wild country again, and the stream, which had been subdividing itself into lesser ones, soon became too difficult to navigate. This was almost at the foot of the mountain range spoken of. Here I determined to camp for the winter, and good quarters were found.

"Before long the cold came, and at times it was impossible to stir from cover. Especially was this the case when the wind blew. At other times it was fairly comfortable, although the lack of sun made it gloomy enough.

"One day I determined to try to scale one of the mountains near us, as I got so tired and weary with being penned up in such a confined place. This idea I put before the Indians. One of them said he would go with me; the other would not risk it, so he was left in camp.

"We went right up the line of the frozen river, which, being a solid mass of ice, made a good roadway. Following this for about twenty miles, at a pretty steep rise, we reached a plateau between the foothills and high range. Here the stream ended and we started to climb one of the big hills. After a lot of hard work we reached a point near the summit. A wonderful view was had from here, but the strangest thing was a city in one of the valleys.

"You may bet I was surprised to see it. At first I thought it was some fantastic arrangement of the ice and snow which had assumed the form of a city, but examination with a glass showed that such was not the case, it being too regular in appearance.

"It was a city, sure enough.

"Determined to see more of it, I commenced to work downward, although the buck was rather frightened, he evidently not considering it 'good medicine.' After several hours of hard work I reached the outskirts of this mysterious city, and found that this place was laid out in streets, with blocks of strange looking buildings, what appeared to be mosques, towers, ports, etc., and every evidence of having been built by art.

"The whole was of solid ice, or seemed to be, but blows from a hatchet on one of the walls disclosed the fact that beneath this barrier of ice was some sort of building material. It looked to be wood, but of stonelike hardness, and apparently petrified.

"The silence around the place was something ghostly. Not the slightest sound broke the awful stillness of the place, which, added to the weird look of the empty streets, made it grewsome enough. I soon got tired of investigating the city, as the streets were blocked in many places with huge masses of ice, rendering passage almost impossible. The buck, too, became uneasy, and we started on the return trip, reaching camp the next day, tired, but satisfied that we had been the first men to gaze on that silent city for centuries.

"After spring had broke I made some strikes in nugget gold at the headwaters of the river, working with the Indians through the summer months, leaving camp for the Yukon about the end of August. We reached the river all right, the trip down being easy, and in due time I got back to Juneau, where I took the steamer for the south.

"It was while I was at Juneau I saw newspapers with an account of the mirage seen at Muir glacier. I did not make any allusions to this, though, as I did not think any one would believe me, but I am positive that the mirage of Muir glacier is the reflection of the frozen city found by me."—Cor. Juneau Times.

Too Much Good Luck.

"If you ever happen to find a silver dollar in the course of your travels, you let it lie right where it is when you see it," said a jolly young broker.

"Coming down on the elevated a few days ago," he continued, "I noticed something bright wedged in between the basketwork seat to the wooden arm. I poked it out with my knife blade and found my prize to be a silver dollar. I had never found any money before, and I felt so good that when I got off the train I stepped into a cigar store and bought four cigars for $1, instead of three for a quarter, as usual. That noon at luncheon I felt awfully thirsty, and, being $1 ahead, I ordered a bottle of claret. Later, buoyed up by the same thought, I asked the boys to take something, and the round cost me ninety cents. When it came time to go home the elevated trains were crowded, so I thought I'd spend my dollar for a hansom cab and drive home, stopping at a theatre, where, on account of my find, I bought tickets of a speculator instead of at the office. I told my wife about my luck and showed her the identical dollar, which I had saved. She was delighted, and insisted upon having the piece smoothed off on one side and the place and date of my good fortune inscribed thereon, the carrying out of which conceit cost me $2.50. Altogether, I should think my find cost me nearly $10; so take my advice, and if you run across any stray dollars don't pick 'em up."—New York Sun.

Garments of the Eskimo.

The Eskimo costume consists in summer of sealskins, and in winter of reindeer skins, the latter being always worn in duplicate, one set with the fur next the body, the other with the fur outside, an arrangement that is even better than the famous one of Brian O'Lynn, who, according to the old song, having no breeches to wear, got him a sheepskin to make him a pair, and then—

With the skinny side out, and the woolly side in,
He was fine and warm was Brian O'Lynn.

The pattern of their garments varies not a whit from generation to generation. The coat, which does not button but is hauled on over the head, has a large capuchin, in Eskimo language, "amook," at the back of the neck. The only difference between the coats of the men and the women lies in the latter being graced with a tail, both "fore and aft," so to speak, upon which the feminine fondness for ornamentation is indulged to the full extent of the wearer's means, so that they may be seen adorned with numerous rows of beads and bits of brass or copper, such things as the works of a clock not being despised, for instance. A very popular form of decoration consists of tablespoons, which they break in two and arrange in various devices, grouping the handles in one place and the bowls in another.—J. Macdonald Oxley in American Magazine.

A Blow at Iced Tea.

"Give me a tenderloin well done, some Lyonnaise potatoes and some celery."

"Yes, sir."

"And, waiter, bring me some iced tea."

"The worst thing you could drink," remarked a doctor who was taking lunch with a reporter.

"How is this?"

"First, the cold water is not good for your stomach, and then as a preventive from any epidemic it is well to boil all fluids used for drinking purposes. Tea taken hot is more wholesome than iced tea. To prove this just look at the Chinese. Their population is enormous, but it could never have increased to the present number if epidemics had ravaged that empire as they have those of the west. The Chinese are a healthy people in spite of their indescribably filthy surroundings. I attribute this to their use of tea as a beverage. This is the only redeeming feature of their lives. They do not drink it iced, but hot, and to make it they have to boil the water. In the presence of an epidemic of cholera, typhoid fever or dysentery the wisest precaution to take is to boil all fluids used for drinking purposes."—New York Mail and Express.

Made Productive by Irrigation.

A young New Englander, who went out to Colorado a few years ago to engage in cultivating the soil, remarked here the other day that it was for a long time incomprehensible to him that what was apparently the most barren and sterile land in that country became the most productive by irrigation. "It was only by hard study and investigation," said he, "that I at last became satisfied as to the process of nature by which this result was brought about. Farms taken up in the sage brush looked unpromising enough, but with watering became immensely productive. The soil was full of alkali. The action of the water was to decompose it and convert it into a fertilizer. It was literally a 'Presto change,' and almost in a night the result was effected. Such land continues productive right along, if properly cultivated, and yields in rotation crops of oats, barley, potatoes, wheat, grass and vegetables the same as elsewhere. It is for reclaiming these waste lands that immense irrigating canals have been built, one of them nearly 100 miles long, to bring the water down from the mountains."—New York Tribune.

The Borderland of Bribery.

The custom of paying eminent barristers large retainers to hold their tongue, and not appear on the other side, has the features of own cousin to a bribe, especially if any jurist so committed stifles his convictions and looks on quietly to see injustice done. I was informed by the treasurer of a Massachusetts railroad, fifty years ago, that to get ahead of the parties wishing to tap it with a rival road, he ran with all haste to Daniel Webster's office across the way. Webster, who had been already approached, but not retained, in the adverse interest, and who, perhaps, preferred the new comer's cause, answered, in guttural tones, that made the treasurer stare: "There are no bones broken, there is no blood spilt;" and put the retainer of 500 easily earned dollars in his vest pocket.—Rev. Dr. Bartol in The Forum.

Protection Against Cold.

It is well known that paper is a great protection against the cold. On the frontier miners and woodsmen preserve large sheets of wrapping paper and newspapers to put between the covering blankets when there is an insufficiency of bed covering in the hotels or camps. An excellent protection out of doors for the chest when wearing the dress suit, with the low cut vest exposing a portion that is generally well covered by the fashionable high cut coat and vest, is a few folds of paper underneath the overcoat. Many roadsters in driving put a few folds of paper across the chest underneath the overcoat as well as at the back, and find effectual protection against the cold winds that prevail at this season. The paper is like a wall in completely protecting the wearer.—New York Times.

PRODUCING AN OPERA.

Manager Aronson Tells How it is Done.

THE PREPARATIONS TAKE MANY WEEKS.

How the Parts are Cast.—Plans for Scenery and Music.

To the uninformed the placing of an opera upon the stage may seem a comparatively trifling matter, but it is really a laborious undertaking, involving months of preparation. As soon as I have decided what my next production is to be my scene painter, stage manager and musical conductor are called into consultation. The painter immediately constructs the models of the scenery called for, while the others and myself begin our consideration of the score. Playing over the music, we decide upon the proper allotment of the principal roles. This gentleman for the tenor, that one for the bass; this lady for the soprano, that one for the contralto, and so on through the minor characters and into the chorus. Instances frequently occur in which it is necessary to employ a double chorus, such as where, without sufficient delay to permit a change of costume, one contingent of young ladies appear in one scene as peasants and in the next as sailors.

Having assigned the characters and selected the chorus, I have the music of the parts hektographed and a copy given to each of the sopranos, tenors, contraltos, bassos and so on. The drill of these people is continued until the various parts are fairly grounded by the conductor, after which he turns them over to an assistant, who continues the task until those who have the least sense of time and tune have thoroughly acquired a knowledge of the music.

DRILLING THE CHORUS.

Of course it is desirable that a chorister should be a trained musician to start with; but sometimes a conductor finds it less difficult to teach one who is entirely ignorant of music, from the fact that such a one usually works industriously, learning his task perfectly, and rarely thereafter deviating from a true rendering. The feminine portion of a chorus is mainly selected for the voice and appearance.

The voice is the primary consideration among the masculine members, but we do make a point of assigning the characters of soldiers to men of tall stature, and those of civilians and peasants to persons of ordinary height.

While the chorus is pursuing its labors with the assistant the conductor devotes his attention to the principals, and after each person has had individual rehearsing the duos and trios are brought together and rehearsed until they have mastered everything.

At about this period we usually call a rehearsal to decide upon the positions, entrances and exits, arranging what is technically known as the "business" of the opera and forming effective and picturesque groupings of the characters and chorus. When this has been perfected we rehearse the opera as a whole, and by this means the principals learn where their music occurs in the action of the play and the choruses discover where their work fits in.

So we go on until the construction of the opera is completed and all its component parts are dovetailed together, as one may say.

As I consider the orchestra a most important factor of the success of any opera, forming the basis upon which the whole fabric is built, this department demands and receives my particular attention. I have the members of mine brought together about midway in the preparation for a new production.

FINAL REHEARSALS.

While all this has been going on the scene painter has been busy in his department, the property men have been preparing the appointments, the carpenters have devised the mechanical contrivances, and the gas engineer has arranged for the proper distribution of the lights and the colored mediums or glasses by means of which he can produce certain desired effects. The costumers, wig makers and boot makers have taken the measurements of principals and chorus.

A week before the date of a production I order a dress rehearsal, so that each partaker can be individually inspected, and changes that are advisable can be made at once. A good deal of discretion and good judgment is necessary to a manager in distributing the various parts to persons who will effectively fill them. Physical fitness must be considered.

Thus, women of elegance, dignity and repose of manner should be selected to represent court ladies, while arch, piquant little bodies do nicely for waitresses and peasants, and young ladies of not too feminine proportions are given a chance to wear a doublet and hose.

If it can be arranged on the night just previous to a new work being brought out, we give a full dress rehearsal, intending it to be in every department equivalent to a first night's performance, and we exert every effort to enable the artists to have an unbroken rest on the day of production. Such in brief is the modus operandi of bringing out an opera.—Rudolph Aronson in Kate Field's Washington.

Blister Beetles in Abundance.

A green insect called the "Spanish fly" has achieved a reputation in medicine. Reduced to a powder it is applied most effectively as a blister, inflaming the skin through the operation of an active principle which the powder contains called "cantharidin." Precious few people are aware, however, that ordinary potato bugs dried and powdered have an equal virtue of the same description. Furthermore, there are ever so many other insects which supply this cantharidin. For example, there are fifteen known species of "blister beetles" in this country which serve the same purpose.—Washington Star.

THE PLASTER PARIS BANDAGE.

How That Valuable Auxiliary to Surgical Science Was Invented.

Let me tell you a story and at the same time give you the history of the plaster Paris bandage. You must understand first that the inventions of plaster Paris, starch, glue and paste bandages are of recent date. During the late war they were unknown, and the first place in which they figured in surgical science was in the Franco-Prussian war of 1870, when the Bavarian splint was first used. The Bavarian splint, which suggested to an American doctor the use of plaster Paris, was a contrivance made to fit closely to the limb. It had a seam up the back, and when removed was split down the front and opened like a book. It could then be used again on a limb of similar dimensions—but to our story.

About the year 1870 a gentleman from New York was making his way to Chicago, where he was going to give personal superintendence to a lawsuit in which he was the plaintiff. If he lost the suit he would lose his all. He had but a day to finish his journey, when, as fate would have it, he slipped on the street in Cleveland, O., and broke his leg. The poor man was in great distress. Everything he had was involved in the Chicago lawsuit. He sent for his doctor and told him that he had decided to continue the journey, even at the risk of his life, stating at the same time the reasons why the journey was so imperative.

The doctor, who happened to be an ingenious fellow, had just been reading about the Bavarian splint, and at once sent for a dentist whom he had seen a few days before making plaster Paris molds of teeth. The dentist came, and both went to work on the limb. They first wrapped it securely with cloth bandages, then buried the entire limb in a mass of the plaster Paris. As soon as it hardened the man was assisted to rise, and a great portion of the surplus plaster was cut off, reducing the bulk. A pair of crutches were secured and the injured man, with his limb securely bound, boarded the train the next morning, to his infinite satisfaction. Of course he won the suit and indirectly hastened an invention that has proved a great value to the medical world.—Interview in Cincinnati Times-Star.

Cast Iron Bricks.

What are termed hollow cast iron bricks are the invention of an Erfurt mechanic. As the name indicates they are made of regular brick form and size, the walls being 0.12 inches thick, but no mortar or other binding material is intended to enter into their use, the method of fastening adopted being as follows: The upper and lower sides of the brick are provided with grooves and protecting ribs, which fit into one another easily and perfectly, so as to make a uniform and complete union or combination.

There are in addition two large circular openings in the upper side of each brick, arranged to receive suitably formed projections on the lower side of the brick above, one of these projections being also hooked shape, thus securing a more secure hold; and in order that the joints be made and remain air and water tight a fluid is applied to the surface of the bricks with a brush. The non-conducting air spaces in the bricks, and the ease with which they may be put together and taken apart without injuring them, are cited as special advantages in their favor as a substitute for ordinary bricks and brick construction.—Chicago Journal of Commerce.

How He Spent His Vacation.

A young man employed in a big retail dry goods store was granted a vacation. It was expected that he would hie to the mountains or go to the shore. The first morning he was free he walked through the store leisurely, nodding to his comrades behind the counters, but speaking to no one. He then made his exit. The second day he was an hour later, but he passed in review his toiling associates, and then went out. This he repeated for six days. When he returned on Monday he was asked why this strange behavior. He replied that he had felt for a long time a desire to do as he pleased in the store, and he had now been able to do so, and he added: "I'm satisfied and ready to go to work again—better satisfied than if I had climbed mountains or bathed in the surf."—Boston Journal.

All Stanley's Fault.

Not long ago a mother looked over the shoulder of her little girl who was groaning about a difficult lesson. The book was open at the map of Africa, and the mother exclaimed:

"Why, how that map has changed since I was a child! Then it had only a few towns about the coast, and all the middle was a blank. We didn't have to learn much about the map of Africa in those days."

"I know it," cried the little girl, almost in tears, "and it's all the fault of that dreadful Mr. Stanley!"—Exchange.

A Lucky Fellow.

Mrs. Sharptongue (querulously)—Here you are earning next to nothing, and our old neighbor, Mr. Quickwit, is making $10,000 a year.

Mr. S.—Lucky fellow, that Quickwit. He's got a job as traveling salesman, and is away from home ten months in the year.—New York Weekly.

The longest day of the year has 19 hours at St. Petersburg, 17 hours at Hamburg, 16 1-4 hours at London, 15 hours at New York and 3 1-2 months at Spitzbergen.

MEXICAN NEWSPAPERS.

An Example of the Enterprise Displayed.

EXTRAORDINARY IDEAS OF JOURNALISM.

Reading the Sunday Paper on Saturday Evening.

"El Nacional y Tiempo de manana!" Now, there's enterprise for you. "The National and Times of to-morrow." To-morrow, mind you, and this in a land where the flies are said to roost low of nights from sheer laziness. Have you anything like it in your so called enterprising New York?

It sort of knocks out the stranger in this land of pulque and tortillas to find that he can read, or rather could read if he understood Spanish, Sunday's paper while he reclines at ease in a big armchair on Saturday evening. It takes all the conceit out of him, and the next day he doesn't carry his head near so high. It is only after he has mastered the language that his old time confidence returns, and the American eagle flaps his wings as lustily as ever to his eyes, for when he is able to read to-morrow's paper today he finds that it is really today's paper of yesterday, or day before yesterday, or week before last.

NO CONCEPTION OF NEWS.

To be sure the paper is dated to-morrow, but if he finds any news of today in it he puts it down as an exceptional case, and when night after night, from 7 o'clock in the evening until 3 o'clock in the morning, he hears the cry, "El Nacional y Tiempo de manana!" he comments on it in the darkness with a plentiful sprinkling of swear words, for the Mexican newsboy's cry is exceptionally shrill and penetrating, and makes sleep a stranger to the nervous man's eyes. Queer institution is the newspaper here in this land of queer institutions. The word newspaper is really a libel on the genuine article, as we know. Newspaper men have absolutely no conception of news, and the much coveted "beat" of New York journalism is an unknown factor in Mexico.

And the people seemed to be perfectly contented with this sort of thing. I have seen The Monitor Republicano, the chief daily paper of the republic, come out, time after time, without a single item of original news. Everything in its news columns was copied from its local contemporaries and full credit was given. This is the practice among all the papers. They make up their local news by taking the few original items that appear in the columns of their competitors. By going carefully through the columns of the city exchanges they manage to fill the space given to "news," so called, and as each paper is enabled to get at least an item or two of something fresh every day, they manage between them to keep the pot boiling and fill from three to five columns. Frequently I have seen an item traveling about for two or three weeks, going from paper to paper as the editors happened to find it. That sounds very funny, doesn't it? Just imagine the cry of "chestnuts!" that would soar heavenward if anything of the kind was attempted in your city. It's all a matter of education, however, and after awhile you learn not to mind it—in fact, you rather like it. I do. It saves an awful amount of wear on the nerves, and you need only read one paper to get absolutely all the news that has been printed, if you only wait long enough. All you require is patience, and you somehow or other accumulate a wonderful stock of it here after a short residence.

THE ENTERPRISE DISPLAYED.

About the funniest illustration—that is funny to you New Yorkers, I mean—of the enterprise displayed by the papers here in laying the news before their readers, occurred some time ago, when Mexico experienced the severest earthquake shocks of which there is any record. Houses were shaken down in different parts of the city, the aqueduct was broken, cutting off the water supply, the great cathedral was cracked, bridges were ruined and the people were almost scared to death. This occurred at 11:30 o'clock on a Saturday night. In your city you newspaper people would have worked your reporters nearly to death and strained the nerves of everybody in the establishment for the purpose of getting a full and complete story of the earthquake and the damage in Sunday morning's paper. Here the Sunday papers had been printed many hours before, and such a thing as an extra or anything of the kind for Sunday was not even dreamed of. As there are no Monday papers—nobody works on Sunday except a few storekeepers—it was Tuesday's papers that were looked to for the news.

On Tuesday El Monitor Republicano informed its expectant readers in about twelve lines, that on Saturday night there had been a very severe earthquake which had done much damage. Its staff of reporters was busily at work investigating the damage, and in a day or two the paper would lay its complete account before the public. And it did on Thursday morning, just five days after the shock. This paper has made a great fortune for its proprietor; its advertising rates are enormous, and the advertising department is more arbitrarily conducted than that of the most independent journal in America. It will print no cuts of any kind or at any price. It will accept no advertisement for stipulated days or for consecutive insertions. The best that you can do, if you want to advertise in its columns, is to secure a contract for a given number of insertions, the dates to be decided by the publishers without consulting you. And this only by paying in advance for all the insertions, some of which may not be given for months afterward. Not a line of paid matter can be secured in the reading columns for love or money. Hundreds of dollars of advertisements are lost daily because the publisher will not increase the size of his paper, which is a four page sheet. Its circulation is about 4,000, and no effort has ever been made to increase it. Like every other newspaper—God save the mark!—in this city and throughout the republic, El Monitor Republicano closes its forms at 6 o'clock in the evening.

Think of that, you overworked news slaves of the place known as "God's country!"—City of Mexico Cor. New York Press.

No Venomous Beetles.

Of more than 40,000 species of beetles widely diffused over the earth's surface not one is known to be venomous, or possessed of a sting. Butterflies and moths have no mouths to eat with, only a proboscis to extract sweet juices from flowers. Neither do they grow after assuming the winged state. When in the caterpillar state they are voracious eaters. A company of some species will strip a whole tree within a single day.—St Louis Republic.

A NATIONAL LITERATURE.

Where We Should Look for a Reflection of Popular Character.

It is as natural for a young people to copy older ones as for an infant to imitate motions and sounds. In the course of nature the infant passes beyond the stage of imitation. When a nation born in the throes of revolution has attained, through years of heroic youth and manhood, the dignity that is ours today as the greatest republic on earth, its life may reasonably be expected to exhibit individuality. For a reflection of the character of a people we look to its literature. Nothing is better able to show forth the daily life and the spirit of a nation than its fiction. The novel and the short story of all lands, merely in their national significance, afford a study of wonderful interest.

The American life of today is a copy of nothing. It is absolutely unique. Nor is it lacking in the most decided elements of romance and of the picturesque. Where its spirit has been caught—perhaps best by Hawthorne—it has yielded everything essential for the most stirring effects. If it were not so—if we had no originality—our writers had better remain copyists, for when they cease to be that they would become nothing. It is to be confessed that our literature has been too long of that character which is worse than silence—of sustained mediocrity. Too long our novelists have gone abroad for their subjects; too long our people have gone abroad for their novelists.

Let the writers look at home for their subjects, and when they have grasped the spirit of American national life they will find a burst of appreciation on the part of the people. But let the writer that would be successful rid himself of the idea that novels of the New York drawing rooms are American stories. The attempt now being made to foist them as such, either on us or on those who judge us by our fiction, is a shameful fraud. Let him get out among the people, breathe American air, look over American fields, acquaint himself with American flowers and birds, visit American cities, and he will find springing up around him material for the best literature the world has seen.

This national life is already being pictured in our short stories. As yet no great novelist is with us, but we have become the best short story tellers in the world. Those who are to inaugurate an American literature are in training. And the dawning of it signifies the reality of our national life, strong, secure, everywhere an inspiration to the cause of human freedom.—Chicago News.

Not Worth Counting.

In California, it is said, they have no smaller coin in circulation than a nickel. People in that land of sudden fortunes and wholesale incomes cannot appreciate the turning of a penny or even the chase of the "nimble sixpence." A San Francisco paper illustrates the contempt of Californians for pennies by the following:

"Give me silver for this, please," said an Eastern tourist yesterday, as he dumped a double handful of one cent pieces on the counter of a prominent money broker.

"I don't want them. They're not worth counting. I wouldn't give fifty cents on the dollar for them," was the reply.

"I never took them but once, and then I had to. A fellow owed me five dollars, and after repeated duns offered payment in coppers. The next day he came in, and shoving a copper cent in my hand asked me to give him credit for that amount upon the debt.

"He kept that up, making a payment of one cent every morning, noon and night—three cents every day—until I accumulated a cigar box full of coppers. They're here yet, and they'll stay here until some one comes along who has more time than money. I won't count them."

Coffee Dying Out.

"The time is not far distant when coffee will have ceased to be the beverage of the people." This declaration was made by Mr. J. J. Grinlinton, who has been a resident of the island of Ceylon for thirty years. Mr. Grinlinton says there is a marked decadence in coffee raising both in Ceylon and Brazil. He also says:

"Some few years ago a fungus parasite attacked the plant and is gradually killing it out. Not only is this true in Ceylon, but it is also the case in Brazil and elsewhere. People must learn to take tea instead. You have noticed that the price of coffee has been gradually ascending. It will continue to do so, and the time is not far distant when the plant will have died out."—Cor. New York Herald.

A $35,000 Notched Stick.

"Here is quite a curiosity," said a Washingtonian, producing a stick two feet in length and curiously notched and split. "There are seven notches," said he. "This is a certificate of deposit issued by the Bank of England over 100 years ago. A stick was taken, notched and split. One piece was given to the depositor, who had to produce it and match the other piece to get his money. It defies forgery and fraud. This stick represented a deposit of £7,000."—Washington Post.

There Are Little Monsters.

A Michigan paper tells of the capture of a fifty-pound turtle in an inland lake, and refers to the creature as a monster. Turtles weighing 300, 400 and 500 pounds are by no means rare on the gulf coast, and so there must be two kinds of monsters—big and little.—Detroit Free Press.

DEATH FROM FREEZING.

A Traveler Describes his Experience.

STRANGE AND DELICIOUS SENSATIONS.

From Martigny to the Hospice of the Great St. Bernard.

On the particular occasion referred to, I started from Martigny at 6 a. m. and intended to traverse the thirty miles to the hospice of the Great St. Bernard before night. Time being of consequence, I thought it prudent, so as to get to the summit of the pass before dark, not to stop for a meal to be cooked at Orsieres or Liddes, but pressed forward to the last place before the snow tramp commenced, the Cantine de Proz. There I met with a young nobleman and his guide. After an interchange of inquiries, and an offer on my part of some chocolate and biscuits to the other travelers, as the cantine was hard up that day in eatables, we set out together, and had crossed the Plan de Marengo without any presentiment of what was going to happen. The first indication of something wrong was the peculiar appearance which my surroundings seemed to assume. Everything looked hazy to my vision—even the snow and the rocks lying about looked as if enveloped in a fog, although the afternoon was beautifully clear. Then I felt that I must sit down and enjoy it; but the guide's flask of kirschwasser set me going again. Very soon, however, the former feeling returned; but the same treatment temporarily recovered me. At last I took to stumbling along, fell down several times, and at length could not help myself. My companions urged me in vain to arouse to one more effort, but it was useless.

The guide's experience was now of the utmost service. Divining the exact state of the case, and what might happen, he took a very sensible course. Leaving the marquis to see to me, he hurried forward to meet the two monks who always came down from the hospice at a particular hour each day, so as to obtain their efficient help. On their arrival, the marquis either went on, on his own account, or was requested to go forward with the news. Anyhow, I was informed the next day that his report was, that "M. le —— had perished in the snows." In the meantime the two monks and guide took me in hand, and, shaking me up, made my hands clasp a belt around the guide's waist, and each of the monks took an arm. The former acted as a substitute for horse power and the two latter as wheels. As for myself I was fast becoming a dead weight. Between the cantine and the hospice there is a space of seven and a half miles of very rough walking, uphill, of course, and with a depth of several feet of snow where the cantonniers had not cleared a path. I suspect that my deliverers had a very difficult task, over at least five miles, to keep me from getting into that sleep from which there is no waking.

The sensations of that journey during occasional gleams of consciousness will never be erased from my mind. Is there such an essence of ecstatic delight as elixir mortis? If there is, it must have been something like it, or the very thing itself, which I enjoyed that day. No words can possibly express the surpassing desire which I felt to sit down and enjoy my felicity—and sleep. But my inexorable friends knew that sleep meant death; and though my repeated appeals of "Doucement, doucement," were plaintive enough, they were met by redoubled efforts to force me onward, even when my own legs would not move any longer. The collapse was complete. During the sustained efforts of the three men, I had but momentary glimpses of consciousness. I remember seeing two somethings, black, one on each side, but very indistinct. These, of course, were the friendly monks. The one overwhelming idea that filled my mind then was how to get to that sleep, that blissful euthanasia which poets have sung about, but which my companions were doing their best to rob me of, just when I had got it within my grasp.

Another lucid interval occurred just as we approached the door of the hospice, for I saw two or three of the dogs; and then I was lost again, till I found myself in the large room, surrounded by several of the canons. One administered some extract of orange flowers, and that was followed by some warm broth. Then another tugged off my boots, socks, etc., and between them, somehow or other, they got me into bed. (This particular room would not have been mine if I had gone as an ordinary traveler usually does. I am under the impression that it was looked upon as the best bedroom, being the one used by Napoleon Bonaparte when he stopped at the hospice en route to the Italian campaign.) In the night I woke, breathing very quickly and very hard. The room itself had the appearance of being one mass of cotton wool. Congestion of the lungs had got hold of me now, and I felt very ill indeed. But, however, the next morning I did what the monks had ineffectually tried to impress upon me the night before, and I made an effort. My first duty to others was to see the excellent guide and make him a due acknowledgment; and as the noble and heroic monks, who live only for others, would not hear of anything but thanks, I had recourse to the tronc of the church. To the three men I am, humanly speaking, indebted for my life. A grateful heart need never be ashamed of its precious burden.—Chambers' Journal.

Experience in Congress.

To go through congress is like going through a university course. Within the halls of the Capitol there are freshmen, sophomores, juniors and seniors in the school of statecraft, and it often takes some several terms past the senior one before they become statesmen and adepts in diplomacy. Then they become valuable counselors to the executive and judiciary departments.

With the fund of legislative perspicacity gained by long training, as the scholar learns his Greek roots, they become valuable servants, shining lights and representatives of American institutions, fit to stand forth before the world in their advocacy of the theory of American republicanism.—Birmingham Age.

Those Bob-Tailed Dress Coats.

Berty—Don't you think I'm brave to come out in it, Awthur? It's awfully short, you know.

Arthur—Why don't you put some "inducer" on it?

Berty—What's "inducer?"

Arthur—That new preparation to make the hair grow.

Berty—There's no hair on this coat.

Arthur—Pardon me, old boy! I thought you were talking about your mustache.—Tid Bits.

INYO INDEPENDENT.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY FRIDAY

INDEPENDENCE, CAL.

FRIDAY MARCH 27..... 1891.

Four members of the Nevada Legislature have been hanged in effigy for supporting pernicious bills. The punishment is an improvement upon the form adopted by the Vigilantes.

When a granddaughter of Queen Victoria was married to a brother of the Czar of Russia the thought arose that peace might be established between the rival nations. But the news comes now that the Princess is being brutally persecuted by her husband and his relatives because she refuses to adopt Russian custom and religion. All classes in England are indignant over the matter and are clamoring for any form of interference that will relieve their countrywoman from the semi-barbaric treatment of the Russians.

The San Francisco "Call" evidently realizes that a Democratic administration is necessary to remove the corruption now extant in politics. Speaking of the present Legislature it says: "It is now in a mood to disregard the pledge made to keep the appropriations down to the fifty-cent limit. We do not suppose that it is of any use to appeal to the party feeling of the Republican majority. The extreme probability that the Republican party will be defeated next year if the Republican Legislature disregards its pledge would not deeply affect the average Republican boodler. A good many of the men how making laws for us at Sacramento have no use for a party that puts a limit on expenditure.

The death of General Johnston reduces the number of surviving Generals of the war to about seven. On the Confederate side Generals Beauregard and Longstreet still live; on the Union side the reaper has not yet smitten Generals Butler, Banks, Rosecranz, Schurz or Gillmore. The sickle cannot long be delayed. The three first-named are respectively 76, 74 and 75 years of age; and the last-named, who was regarded as a boy when his genius caused him to be entrusted with the bombardment of Forts Pulaski and Sumter, is a veteran of 66. Thirty years have elapsed since the war broke out; at the start few officers under 35 or 40 were placed in command of army corps; such men must be 65 or 70 if they still survive. Joe Johnston himself had served as a Colonel in the army in the war with Mexico and was 84 when he died on Saturday.

The election of Hon. Charles N. Felton to the United States Senate may be regarded by the people of California as a successful move in the direction of clean politics. Mr. Felton was elected to that honorable position solely upon his merits. The joint Legislature after several days spent in balloting concluded that he was the ablest and best man for the place. Though Mr. Felton resides in the northern part of the State, the people of the southern part may rest assured their interests will meet with his careful and earnest consideration. In developing the oil wells in Los Angeles County he has built up an industry that has incalculably benefited that section. His experience in Congress will enable him to do more for us than perhaps any man we could select from our own district, and that he will labor unceasingly for our welfare, we may rest assured. His record for the next two years will surely make him the strongest possible candidate to succeed himself before the next Legislature.

THE NEW BALLOT LAW

AN ACT TO AMEND SECTIONS 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1192, 1193, 1194, 1195, 1196, 1197, 1198, 1199, 1200, 1201, 1202, 1203, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1257, 1258, AND 1259 OF THE POLITICAL CODE, AND TO ADD FOUR NEW SECTIONS THERETO, TO BE NUMBERED 1213, 1514, 1215, and 1216, ALL IN RELATION TO THE CONDUCT OF ELECTIONS IN THIS STATE.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section 1185 of the Political Code is hereby amended to read as follows:

Sec. 1185. All ballots cast in elections for public officers within this State shall be printed and distributed at public expense as hereinafter provided. The printing of general tickets and cards of instruction to electors of each county, and the delivery of the same to the election officers, shall be a county charge, the payment of which shall be provided for in the same manner as the payment of other county expenses; and the printing and delivering of "municipal tickets," and also in case of separate elections for city, city and county, or town officers, the printing and delivering of cards of instruction shall be a charge upon the respective city, city and county or town in which such "municipal tickets" and cards of instruction are to be used, the payment of which shall be provided for in the same manner as the payment of other city, city and county or town expenses.

SEC. 2. Section 1186 of the Political Code is hereby amended to read as follows:

Sec. 1186. Any convention, as hereinafter defined, held for the purpose of making nominations for public office, and also electors, to the number hereinafter specified, may nominate candidates for public offices to be filled by election within the State. A convention, within the meaning of this act, is an organized assemblage of delegates representing a political party which, at the last election before the holding of such convention, polled at least 3 per cent. of the entire vote of the State, county, district or other political division for which the nomination is made; provided, that in any county, township, city or district wherein no general election shall have been held after its organization, a convention of any party polling at least 3 per cent. of the votes cast in the precincts composing such county, township, city or district shall have the same power, and its nominations the same effect as though such county, township, city or district had been organized before the next preceding general election.

SEC. 3. Section 1187 of the Political Code is hereby amended to read as follows:

Sec. 1187. All nominations made by any such convention shall be certified as follows: The certificate of nomination, which must be in writing, shall contain the name of each person nominated, his residence and the office for which he is nominated, and shall designate the party or principle which such convention represents. It shall be signed by the chairman and secretary of such convention, who shall add to their signatures their respective place of residence, and make oath before an officer authorized to administer the same, that the matter stated in such certificate is true to the best of their knowledge and belief, and a certificate of the oath shall be annexed to the certificate of nomination.

SEC. 4. Section 1188 of the Political Code is hereby amended to read as follows:

Sec. 1188. A candidate for public office may be nominated otherwise than by a convention in the manner following: A certificate of nomination containing the name of the candidate to be nominated, with the other information required to be given in the certificates provided for in Section 1187 of this code, shall be signed by electors residing within the district or political division for which candidates are to be presented, equal in number to at least ½ per cent. of the entire vote cast at the last preceding election in the state, district or political division for which the nomination is to be made; provided, that 1,000 signatures shall be sufficient for the nomination of a candidate for any office in the State. Said signatures need not all be appended to one paper, but each signer shall add to his signature his place of residence, giving the street and number, when he resides in a city. One of the signers of each such certificate shall swear that the statements therein made are true to the best of his knowledge and belief, and a certificate of such oath shall be annexed. Such a certificate, when made as above prescribed, shall have the same effect as a certificate of nomination made by a party convention.

SEC. 5. Section 1189 of the Political Code is hereby amended to read as follows:

Sec. 1189. Certificates of nomination shall be filed with the Secretary of State for the nomination of candidates for offices to be filled by the electors of the entire State, or for members of the State Board of Equalization, State Board of Railroad Commissioners, or House of Representatives. Certificates of nomination shall be filed with the Clerk or Secretary of the legislative body of any incorporated city or town for the nomination of any candidate for an office under the government of any city or town, to be filled by the electors of such city or town. For all other nominations to public offices, certificates of nomination shall be filed with the clerks of the respective counties wherein the offices are to be filled by the electors; and where the district or political division embraces more than one county, such certificate must be filed with the Clerk of the county in which the candidate resides, and the name of each such candidate as specified in the certificate of nomination shall be certified by said County Clerk to the County Clerks of the other counties within the district or political division, not less than fifteen days before the day of election.

SEC. 6. Section 1190 of the Political Code is hereby amended to read as follows:

Sec. 1190. No certificate of nomination shall contain the name of more than one candidate for each office to be filled. No person shall join in nominating, under the provisions of this code, more than one nominee for each office to be filled, and no person who has voted in a convention for or against a candidate for any office shall join in nominating, in any manner, any other nominee for that office, and no person shall accept a nomination to more than one office.

SEC. 7. Section 1191 of the Political Code is hereby amended to read as follows:

Sec. 1191. The Secretary of State shall preserve in his office for the period of two years all certificates of nomination filed therein under the provisions of this code, and each County Clerk shall preserve in his office for a like period all certificates of nomination filed therein under the provisions of this code, and each Clerk or Secretary of the legislative body of any incorporated city or town shall for a like period preserve in his office all certificates of nomination filed therein under the provisions of this code.

SEC. 8. Section 1192 of the Political Code is hereby amended to read as follows:

Sec. 1192. Certificate of nomination required to be filed with the Secretary of State shall be filed not more than sixty days and not less than forty days before the day fixed by law for the election of the persons in nomination when the nomination is made by convention, and not more than sixty days and not less than thirty days before the day of election when the nomination is made by electors as provided in Section 1188 of this code. Certificates of nomination required to be filed with the County Clerks, or with the Clerk or Secretary of the legislative body of any city or town, shall be filed not more than fifty nor not less than thirty days before the day of election, when the nomination is made by a convention, and not more than fifty days nor less than twenty days before the day of election when the nomination is made by electors. Should a vacancy in the list of nominees of a convention occur, such vacancy may be filled by the convention, or if it has delegated to a committee the power to fill vacancies, such committee may, upon the occuring of such vacancy, proceed to fill the same; provided, that no nomination shall be made or certified at a period before the day of election less than the minimum number of days provided for filing certificates of nomination made under this code. The chairman and secretary of the convention, or of such committee, shall thereupon make and file with the proper officer a certificate setting forth the cause of the vacancy, the name of the person nominated, the office for which he was nominated, the name of the person for whom the new nominee is to be substituted, the fact that the committee was authorized to fill vacancies, and such further information as is required to be given, in an original certificate of nomination. When a certificate to fill any vacancy shall be filed with the Secretary of State, he shall in certifying the nomination to the various County Clerks, insert the name of the person who has been thus nominated to fill a vacancy in the place of that of the original nominee. Any person whose name has been presented as a candidate, may, at least five days before the making of the publication of the nominations prescribed in this section, cause his name to be withdrawn from nomination by filing with the Secretary of State and County Clerk his request therefor in writing, signed by him and acknowledged before the County Clerk of the county in which he resides, and no name so withdrawn shall be printed on the ballot.

SEC. 9. Section 1193 of the Political Code is hereby amended to read as follows:

Sec. 1193. Not less than twenty-five days before an election to fill any public office, the Secretary of State shall certify to the County Clerk of each county within which any of the electors may by law vote for candidates for such office, the names of each person nominated for such office, as specified in the certificate of nomination filed with the Secretary of State.

SEC. 10. Section 1194 of the Political Code is hereby amended to read as follows:

Sec. 1194. At least ten days before an election to fill any public office, the County Clerk of each county shall cause to be published, in at least two newspapers of general circulation within the county, the nominations to office certified to him by the Secretary of State, and also all those filed with the County Clerk. He shall make not less than two such publications in each of such newspapers before election day, one of such publications being made upon the last day upon which such newspaper is issued before the day of election. The list of nominations published by the County Clerks of the respective counties shall be arranged in the order and form in which they will be printed upon the ballot. The Clerk or the Secretary of the legislative body of any incorporated city or town with whom the names of any candidates have been filed shall publish in the same manner the list of nominations filed with him; but where only one newspaper is printed in any county, city or town, then publication in such newspaper shall be deemed sufficient, and where no newspaper is printed in such county, city or town, publication shall be made through any newspaper designated by the Board of Supervisors of said county, or the legislative body of such city or town, and by posting copies of the ballot in three of the most public places in such county, city or town not less than ten days before the day of election.

SEC. 11. Section 1195 of the Political Code is hereby amended to read as follows:

Sec. 1195. Whenever a proposed constitutional amendment, or other question, is to be submitted to the people of the State for the popular vote, the Secretary of State shall duly, and not less than twenty-five days before election, certify the same to the Clerk of each county of the State; and the Clerk of each county shall include the same in publication provided for in Section 1194 of this code.

SEC. 12. Section 1196 of the Political Code is hereby amended to read as follows:

Sec. 1196. Except as in this code otherwise provided, it shall be the duty of the County Clerk of each county to provide printed ballots for every election of public officers, except elections for city or town officers, in which electors or any of the electors within the county participate, and to cause to be printed in the appropriate ballot the name of every candidate whose name has been certified to, or filed with the County Clerk, in the manner provided for in this code. Ballots other than those printed by the respective County Clerks, or the Clerk or Secretary of the legislative body of any incorporated city or town, according to the provisions of this code, shall not be cast nor counted at any election. It shall be the duty of the County Clerk of any consolidated city and county to provide separate ballots for every election for city and county officers in which the electors or any of the electors of such city or county participate, and to cause to be printed in such separate ballots the name of every candidate for a city and county office, whose name has been filed with the said County Clerk in the manner provided in this code. It shall be the duty of the Clerk or Secretary of the legislative body of any incorporated city or town to provide separate ballots for every election for city or town officers in which the electors, or any of the electors, of such city or town participate, and to cause to be printed in such separate ballots the name of every candidate whose name has been filed with such Clerk or Secretary in the manner provided for in this code. All ballots shall be of the necessary size and shape to contain the names of all the candidates, together with the necessary blank spaces hereinafter provided for, and shall be printed on tinted paper furnished by the Secretary of State. It shall be the duty of the Secretary of State to obtain and keep on hand a sufficient supply of paper for ballots, and to furnish the same in quantities ordered to any County Clerk, or Clerk or Secretary of the legislative body of any incorporated city or town upon payment by them of the cost of such paper. Such paper shall be a water marked with a design to be furnished by the Secretary of State, in such manner that the said water mark shall be plainly discernible on the outside of such ballot when folded according to law. Such design shall be kept secret from all persons not engaged in the preparation, printing or distribution of the paper so marked until the day of election. Such design shall be changed for each general election, and the same design shall not be used again at any general election within the space of 14 years, but at any special or special election paper marked with the design used at the previous election may be used. Nothing in this code contained shall prevent any voter from writing upon his ballot the name of any person for whom he desires to vote for any office, and such vote shall be counted the same as if printed upon the ballot and marked as voted for.

SEC. 13. Section 1197 of the Political Code is hereby amended to read as follows:

Sec. 1197. All ballots printed by County Clerks, other than the separate ballots containing the names of candidates for city and county offices printed by the County Clerks of consolidated cities and counties shall be headed "General Ticket"; and all ballots printed by County Clerks of consolidated cities and counties, containing the names of candidates for city and county offices, and all tickets printed by the Clerks or Secretary of the legislative body of any incorporated city or town, shall be headed "Municipal Ticket." Under the heading of all general tickets, the respective number of the Congressional, Senatorial and Assembly district in which the ballot or ticket is to be voted shall be printed, together with the following direction to voters: "To vote for a person [stamp], a cross (X) in the square at the right of the name." Opposite the line of each office shall be printed a direction to the voter specifying the number of persons to be voted for for that office, and opposite each constitutional amendment or other question to be voted upon in separate lines the words "yes" and "no." All municipal tickets containing the names of candidates for ward or district offices, in addition to such direction to voters, shall have the number of the ward or district in which such ticket is to be voted printed thereon. All municipal tickets shall be printed upon paper of a different tint from that of the general tickets. Each ballot so perforated that it shall extend from top to bottom, one-half inch from the right-hand side of such ballot, and upon the half-inch strip thus formed there shall be no printing except the numbers of the ballot, which shall be upon the back of such strip in such manner that it shall appear on the outside when the ballot is folded. The number on each ballot shall be the same as that on the corresponding stub, and the ballots and stubs shall be numbered consecutively in each county. All ballots shall be 18 inches in length and 4½ in width, and as many times such width as shall be necessary to contain the names of all candidates nominated. Where the names of candidates are printed in separate columns, columns shall be separated by heavy rules; and each ballot shall have the names of candidates shall each be separated by a rule extending to the extreme right of the column. All ballots shall be printed in plain Roman type, and shall contain the name of every candidate whose nomination for any office specified in the ballot has been certified to and filed according to the provisions of this code, and no other name; [and there shall be added to all the names of candidates their party or political organization.] The names of the candidates for each office shall be arranged under the designation of the office, in alphabetical order, according to surname. [Except that the names of candidates for the office of electors for President and Vice-President shall be arranged in groups as presented in the several certificates of nomination, and the voter may vote for the whole of said group by making one mark after such group.] There shall be left at the end of the list of candidates for each office as many blank spaces as there are persons to be elected to such office in which the voter may insert the name of any person not printed upon the ballot for whom he desires to vote as candidate for such office; and the names and the blank spaces on the whole ticket shall be consecutively numbered, the figures being placed on the left-hand side of such names and blank spaces. There shall be a margin on the right-hand side of the names, at least one-half of an inch wide, so that the voter may clearly indicate, in the way to be hereinafter pointed out, the candidate and candidates for whom he wishes to cast his ballot; the county, city or town in which each candidate resides may be printed in small type on the right-hand side of his name. Whenever any question is to be submitted to the vote of the people, it shall also be printed upon the ballot in such a manner as to enable the electors to vote upon such question in the manner hereinafter provided. At the head of each ballot shall be printed in separate lines the names of all political parties which have filed certificates of nomination of candidates in accordance with Sections 1186 and 1187 of this code, thus: "Regular Republican Ticket", (straight) opposite the names of each party, and on the same line therewith, there shall be a margin similar to that herein required, to be left opposite the name of each candidate, in which the voter may place the mark in the manner specified in Section 1205 of this code, if he desires to vote for all the candidates of such party, but a ballot so marked shall not be counted if it [be stamped in any other place] except to indicate a vote or votes upon a constitutional amendment or other question.

SEC. 14. Section 1198 of the Political Code is hereby amended to read as follows:

Sec. 1198. All ballots, when printed, shall be bound in stub-books of 100 ballots each. A record of the number of ballots printed by them shall be kept by the respective County Clerks, and by the Clerk or Secretary of the legislative body of each incorporated city or town.

SEC. 15. Section 1199 of the Political Code is hereby amended to read as follows:

Sec. 1199. The County Clerk of each county shall provide for each election precinct in the county not less than one hundred sample ballots for every city or incorporated city and every precinct registered in the election precinct; and in case of a consolidated city and county, an equal number of municipal tickets when any city and county officers are to be elected; and the Clerk or Secretary of the legislative body of any incorporated city or town shall furnish a like number of municipal tickets when any city or town officer is to be elected.

SEC. 16. Section 1200 of the Political Code is hereby amended to read as follows:

Sec. 1200. Whenever it shall appear by affidavit that an error or omission has occurred in the publication of the name or description of the candidates nominated for office, or in the printing of the ballots, the Superior Court of the county, or the Judge thereof, shall, upon application by any elector, by order, require the County Clerk to correct such error, or to show cause why such error should not be corrected.

SEC. 17. Section 1201 of the Political Code is hereby amended to read as follows:

Sec. 1201. Before the opening of the polls at any election within any county, the County Clerk of the county shall cause to be delivered to the Boards of Election of each election precinct which is within the county, and in which the election is to be held, at the polling place of the election precinct, the proper number of general tickets to be used in the election precinct, in sealed packages, with marks on the outside, clearly designating the precinct or polling-place for which they are intended, and the number of ballots inclosed, and in case of a consolidated city and county, also a like number of municipal tickets; and the Clerk or Secretary of any incorporated city or town shall in like manner cause to be delivered the proper number of municipal tickets. The County Clerk, Clerk or Secretary shall prepare a receipt for each polling-place, enumerating the packages and stating the time and day and date when the same were delivered by him to the Inspectors of Election. The Inspectors of Election shall sign said receipt upon receipt of the packages, which shall forthwith be returned and filed. The County Clerk, Clerk and Secretary respectively shall have authority to employ such messengers as may be necessary to insure the safe and expeditious delivery of the ballots to the Inspectors or Judges of Election, as provided in this code, and the Board of Supervisors, or other board or body having the control of elections, shall allow such messengers a reasonable compensation for their services, to be paid as other election expenses are paid. In case of the prevention of an election in any precinct by the loss or the destruction of the ballots intended for that precinct, the Inspector or other election officer for that precinct shall make an affidavit setting forth the fact, swear to the same before an officer authorized to administer oaths, and transmit it to the Governor of this State. Upon receipt of such affidavit the Governor may order a new election in such precinct, and upon the application of any candidate for any office to be voted for by the electors of such precinct the Governor shall order a new election in such precinct.

SEC. 18. Section 1202 of the Political Code is hereby amended to read as follows:

Sec. 1202. At the same time and in the same manner as Inspectors and Judges of Election are now appointed in this State, two ballot clerks for each election precinct in the State shall be appointed, whose duty it shall be to have charge of the ballots on the day of election, and to furnish them to the voters in the manner hereinafter provided. Such ballot clerks shall possess the same qualifications, and shall be paid the same compensation, as Inspectors of Elections. In making appointment of such ballot clerks, one of them shall be taken from the political party that polled the largest number of votes at the last preceding election and the other from the party that polled the next largest number of votes at such election. They shall act as additional Clerks of Election when the polls are closed, and they shall serve until the votes are counted and the returns are signed; provided, that whenever a general and municipal election shall be held at the same time, there shall be appointed one additional Inspector, one additional Judge, and two additional clerks in the manner now provided by law.

SEC. 19. Section 1203 of the Political Code is hereby amended to read as follows:

Sec. 1203. All offices upon whom is imposed by the law of the State the duty of designating polling places shall cause such polling places to be suitably provided with a ballot-box, to be marked on the outside, "general tickets," and when any city, city and county or town officers are to be elected a second ballot-box, to be marked on the outside "municipal tickets," and shall also provide a sufficient number of places, booths or compartments at or in which voters may conveniently mark their ballots, so that in the marking thereof they may be secured from the observation of others, and a guard-rail shall be so constructed and placed that only such persons as are inside said rail can approach within six feet of the ballot-boxes and of such booths or compartments. The arrangements shall be such that the ballot-boxes or the box-booth or compartments shall be hidden from the view of those just outside the said guard-rail. The number of such voting booths or compartments shall not be less than one for every 100 persons or fraction thereof, who may vote in the precinct. No person other than election officers, receiving, preparing or depositing their ballots shall be permitted to be within said rail before the closing of the polls except by authority of the Board of Election, and then only for the purpose of keeping order and preventing fraud. Each of said voting booths or compartments shall be kept provided with proper supplies and conveniences for marking the ballots.

SEC. 20. Section 1204 of the Political Code is hereby amended to read as follows:

Sec. 1204. Any person desiring to vote shall give his name and address to one of the ballot clerks, who shall then, in an audible tone of voice, announce the same, and if the other ballot clerk finds the name on the register, he shall in like manner repeat the name and address, whereupon a challenge may be interposed, as provided in Section 1230 of this code. If the challenge be overruled, the ballot clerk shall give him a ticket, and the clerk shall write on the register, opposite the name of the voter, the number of the general ticket given him, and also the number of the municipal ticket, if voted on, when any city, city and county or town officer is to be elected; and the voter shall be allowed to enter the place inclosed by the guard-rail, as above provided. The ballot clerk shall deliver to the voter the proper ballots, and where any city, city and county or town officers are to be elected, also one municipal ticket; and only one ballot of each kind.

SEC. 21. Section 1205 of the Political Code is hereby amended to read as follows:

Sec. 1205. On receipt of his ballot the elector shall forthwith, and without leaving the inclosed space, retire alone to one of the polling booths or compartments provided to prepare his ballot. He shall prepare his ballot by marking a cross after the name of the person or persons for whom he intends to vote, thus, X; provided, however, that any elector who desires to vote for an entire party ticket, may mark a cross as above described against the political designation of such party, and shall be deemed to have voted for all the candidates nominated by such party for use at a constitutional amendment or other question submitted to the vote of the people, by marking in the appropriate margin, a cross (X) against the answer upon the question he desires to give, thus, X. He shall then fold the ballot so as to conceal the marks upon the same, which will hereby appear on the outside, and be provided by the officers aforesaid, or by him code required to furnish election supplies, for each booth or compartment provided for the marking of ballots, with a pen or other suitable instrument for marking and fastening the ballot, and shall fold the ballot in such a manner that the number on the ballot shall appear on the outside thereof, without displaying the marks on the face thereof, and shall keep it folded until he has voted. He shall then, without exhibiting it, deliver it folded to the Inspector, who shall announce in an audible tone of voice the name of the voter and the number of his ballot. The ballot clerk having the register in charge, if he finds the name of the voter, and that the number marked opposite the name of the voter is the same, shall in like manner repeat the name and number, and shall mark opposite the name the word "voted." The Inspector shall then separate the numbered from the ballot, and shall deliver the latter to the ballot clerks. All ballots voted shall be immediately deposited.

SEC. 22. Section 1206 of the Political Code is hereby amended to read as follows:

Sec. 1206. Not more than one person shall be permitted to occupy any one booth at one time, and no person shall remain in or occupy a booth longer than shall be necessary to prepare his ballot, and in no event longer than five minutes.

SEC. 23. Section 1207 of the Political Code is hereby amended to read as follows:

Sec. 1207. Any voter who shall spoil a ballot shall return such spoiled ballot to the ballot clerks and receive another one in its place, one at a time, being required to return one of the ballots thus returned shall be immediately cancelled, and, with those not distributed to the voters, shall be returned with the registered list and ballots, as now provided in Sections 1238 and 1239 of this code. If any voter who does not vote the ballot delivered to him shall, upon leaving the polling place, return such ballot to the Ballot Clerks having charge of the ballots, who shall immediately cancel the same and return them in the same manner as spoiled ballots. The Ballot Clerks shall account for the ballots delivered to them by returning a sufficient number of unused ballots to make up, when added to the number of official ballots cast and the number of spoiled ballots returned, the number of ballots originally received, and it shall be the duty of the officers receiving such returned ballots to compel such an accounting.

SEC. 24. Section 1208 of the Political Code is hereby amended to read as follows:

Sec. 1208. Any elector who declares, under oath, to the presiding election officer that he cannot prepare his ballot without assistance by reason of physical disability, he is unable to mark his ballot, shall, upon request, receive the assistance of any one of the officers of election that he may choose in the marking thereof, and such officer shall thereafter give no information regarding the same.

SEC. 25. Section 1209 of the Political Code is hereby amended to read as follows:

Sec. 1209. No member of the Board of Election shall deposit in the ballot-box any ballot from which the slip containing the number of the ballot has not been removed by the Inspector.

SEC. 26. Section 1210 of the Political Code is hereby amended to read as follows:

Sec. 1210. The County Clerk of each county, or in case of separate city or town elections, the Clerk or Secretary of the legislative body of such city or town shall cause to be printed on plain white paper, without water-mark or indorsements (except the words "sample ballot") at least as many copies of the form of ballot provided for use in each voting precinct as there shall be registered voters in such precinct. Such copy shall be designated "sample ballots," and shall be furnished to registered voters at the office of such Clerk or Secretary five days before the day fixed by law for such election, and at any time during such five days; provided, that not more than one sample ballot shall be furnished to any one voter. Such Clerk or Secretary shall cause to be printed, in large, clear type, on cards, instructions for the guidance of electors in obtaining and marking their ballots. He shall furnish twelve such cards to the Board of Election in each election precinct in his county, at the same time and in the same manner as the printed ballots and sample ballots. The Board of Election shall post at least one of such cards in each booth or compartment provided for the preparation of ballots, and not less than three of such cards at other places in and about the polling places on the day of election. Sections 1214 and 1215 of this code and Section 61 of the Penal Code shall also be printed on each of said cards.

SEC. 27. Section 1211 of the Political Code is hereby amended to read as follows:

Sec. 1211. In canvassing the votes any ballot which is not made as provided in this act shall be void, and shall not be counted; but each such ballot must be preserved and returned with the other ballots. Any name written upon a ballot shall be counted for the office under which it is written, whether or not a cross is marked after it. If a voter marks more names than there are persons to be elected to an office, or if for any reason it is impossible to determine the voter's choice for any office to be filled, his ballot shall not be counted for such office.

SEC. 28. Section 1212 of the Political Code is hereby amended to read as follows:

Sec. 1212. Any person entitled to vote at a general election held within this State shall, on the day of such election, be entitled to absent himself from any service or employment in which he is then engaged or employed for the period of two consecutive hours, between the time of opening and the time of closing the polls; and such voter shall not, because of so absenting himself, be liable to any penalty, nor shall any deduction be made on account of such absence from his usual salary or wages.

[Amend Section 1257 of the Political Code to read as follows:

After the polls are thus signed, the board must proceed to open the ballots and count and ascertain the number of votes cast for each person voted for. All the ballots must be taken out of the ballot-box, one at a time, and opened by one of the members of the board, and as so taken out, the straight ballots must be placed in separate piles, according to their respective ticket headings, vignettes, or other designations in manner as follows, to wit: All the straight ballots of each such party must be placed in a separate pile, and straight undesignated ballots must be placed in a separate pile in a like manner. When all the straight ballots shall have been so placed in piles, the number of ballots in each such pile must be carefully, correctly and distinctly counted aloud by a member of the board, in presence of the board and of the bystanders, whereupon an official record must be made by each clerk of the total number of ballots in each such pile. Immediately thereafter all straight ballots, according to their respective headings, vignettes or other designations, shall be distinctly read by such clerks, and the official total of such pile so made by clerks shall be read in connection with the office for which he is a candidate, and said total shall be so credited to such candidate. Immediately thereafter all straight ballots must be by one of the Judges strung upon one string in such a manner that all the straight ballots of each party shall be in direct succession and immediate proximity upon said string, and all such straight ballots thereupon be securely bound together by said string and replaced in the ballot-box.

All the ballots, other than straight ballots, of each separate political or other party must be placed in a pile. When all the ballots shall have been so placed in a pile the number of ballots in each such pile must be carefully, correctly and distinctly counted aloud by a member of the board in the presence of the board and of the bystanders, whereupon an official record must be made by each clerk of the total number of ballots in such pile. Immediately thereafter all the ballots, other than straight ballots, must be by one of the Judges strung upon one string in such a manner that all the ballots, other than straight ballots, shall be in direct succession and immediate proximity upon said string, and all such ballots, other than straight ballots, shall thereupon be securely bound and replaced in the ballot-box. Immediately thereafter such pile of ballots, other than straight ballots, must be taken out one at a time by one of the members of the board, and the name of each person marked in the ballots as voted for shall be distinctly read in connection with the office for which he is a candidate. After the ballots, other than straight ballots, have been so counted, and an official record, as heretofore mentioned, made, all ballots rejected for illegality must be strung upon said string of ballots, other than straight ballots; whereupon all the ballots thus strung shall be securely bound and be replaced in the ballot-box.]

SEC. 29. Section 1258 of the Political Code is hereby amended to read as follows:

Sec. 1258. The ballots so strung down each office to be filled and the name of each person marked in each ballot as voted for to fill such office, and keep the number of votes by tallies as they are read aloud.

SEC. 30. Section 1259 of the Political Code is hereby amended to read as follows:

Sec. 1259. The ballots so strung as the names marked on them as voted for are read, must be strung on a string by one of the judges, and must not thereafter be examined by any person, but must, as soon said are counted, be carefully sealed in an envelope, each member of the board writing his name across the seal.

SEC. 31. Four new sections are hereby added to the Political Code, to be numbered, respectively, 1213, 1214, 1215 and 1216, as follows:

Sec. 1213. No person shall falsely make, or fraudulently deface or destroy any certificate of nomination, or any part thereof, or alter any certificate of nomination, knowing the same to be false, or any part thereof to be falsely made, or suppress any certificate of nomination which has been duly filed, or any part thereof, or make, use, keep or furnish to others, except as in this code so directed, any ballot purporting to be an imitation of a ballot paper, or disclose the same to any person not engaged in making, printing or distribution of ballot paper or ballots.

Sec. 1214. No person shall, during an election, remove or destroy any of the supplies or other conveniences placed in the election booths or compartments, as provided in this code, for the purpose of enabling the voter to prepare his ballot. No person shall, during an election, remove, tear down or deface the cards printed for the instruction of voters.

Sec. 1215. No officer of election shall disclose to any person the name of any candidate for whom any elector has voted. No officer of election, nor any person, shall do any electioneering on election day within one hundred feet of the polling place. No person shall remove any ballot from any polling place before the closing of the polls. No person shall apply for or receive any ballot at any election precinct other than that in which he is entitled to vote. No person shall show his ballot after it is marked to any person in such a way as to reveal the contents thereof, or the name or names of the candidate or candidates for whom he has marked his ballot; nor shall any person, except a member of the Board of Election, receive from any voter a ballot prepared for voting, or any other than such ballot, or solicit the voter to show the same. No person shall ask another at a polling place for whom he intends to vote. No voter shall receive a ballot from any other person than one of the judges of election; nor shall any judge give more than a ballot to any elector, nor any other than the one he has received from the ballot clerk. No person shall place any mark upon his ballot by which it may be afterward identified as the one voted by him.

Sec. 1216. In all counties, and cities and counties, in this State, having a Registrar of Voters and a Board of Election Commissioners, the duties imposed on the County Clerks by this code upon the County Clerks and other officers, in relation to matters of election and polling places, shall be exercised and performed by such Registrar of Voters and Board of Election Commissioners, and all certificates of nomination required to be filed with, or be issued by, County Clerks shall be made to the Registrar of Voters.

SEC. 32. This act shall take effect on the 1st day of July, 1891.

Easily Opened a Burglar Proof Safe.

Mind Reader Johnstone's feat of opening a Chicago hotel safe was outdone in Sioux Falls, S. D., by a 16-year-old boy, Ed M. Sanders. The county officials have just taken possession of the new court house, and young Sanders has been at work in the building as a plumber's assistant.

County Treasurer Swenson, Chairman McKee, and a number of other county officials were in the treasurer's room, and were congratulating themselves that the county now had a burglar proof vault which would defy all attempts to open it. Young Sanders happened along and made the remark that he could open the safe himself. Chairman McKee smiled at the young man's bluff and offered to make him a present of $5 if he would open the safe. The young man replied that he was too busy at that time to undertake the job. Mr. McKee offered to increase the amount to $10, whereupon the young man accepted.

The young man then left the room, and County Treasurer Swenson proceeded to close the vault doors and to securely lock them. The youthful imitator of Johnstone was brought in and set about his task. He asked all present to keep very quiet, and, placing his ear against the door of the safe, commenced operations. His sensitive ear caught every fall of the tumblers, and in less than five minutes the young man, with a smile on his face, threw open the door. The $10 was handed him, and the county commissioners will insist upon the safe company taking out the vault, as the company had guaranteed the vault to be perfectly burglar proof.—Cor. Chicago Herald.

Parental Gloom in Our Homes.

Boys and girls are often spoiled by parental gloom. The father never unbends. The mother's rheumatism hurts so she does not see how little Maggie can ever laugh. Childish curiosity is denounced as impertinence. The parlor is a parliament, and everything in everlasting order. Balls and tops in that house are a nuisance, and the pap that the boy is expected most to relish is geometry, a little sweetened with the chalk of blackboards. For cheerful reading the father would recommend "Young's Night Thoughts," and Hervey's "Meditations Among the Tombs."

At the first chance the boy will break loose. With one grand leap he will clear the catechisms; he will burst away into all riotous living. He will be so glad to get out of Egypt that he will jump into the Red sea. The hardest colts to catch are those that have a long while been locked up. Restraints are necessary, but there must be some outlet. Too high a dam will overflow all the meadows.—Rev. T. De Witt Talmage.

Estate of C. D. Begole, deceased—Filed affidavit of publication.

WEDNESDAY, March 25, 1891.

Davis vs. Keys—Filed answer to concomplaint.

DIED.

HEROD.—At Bakersfield, March 25th, Mrs. James Herod, daughter of Mr. and Mrs. J. C. Crocker of Big Pine.

Showery weather during the week.

General Joseph E Johnston is dead.

J. R. Moffet was in town yesterday.

The trout law is out next Wednesday.

Jake Miller got back from Big Pine last Tuesday.

Archie Farrington has gone to San Francisco.

An alliance has been formed between France and Russia.

Peach and apricot trees look like so many huge bouquets.

Lawrence Barrett, the tragedian, died at New York last Saturday.

Charley Huile has been laid up for the past two weeks with the grippe.

Jeff Ziglar and Pete Meyer, who were ill from the grippe, are around again.

George Wood has been confined to his bed for the past week with la grippe.

To-day being Good Friday services were held at 10 a. m. at the M. E. church.

Mat. McDonald and John Reilly came in from Darwin on yesterday morning's train.

J. W. P. Laird Esq. returned to Independence from Sacramento on Wednesday's train.

The Waite Hill is at present deserted. Keys, Thorpe and Davis have been in town for the past week.

In this week's issue will be found the full text of the new ballot law. It should be carefully read by every voter.

James Peregrine was down from Bishop several days this week on land business. He returned home yesterday.

Look out for the Easter service at Independence next Sunday at 7 p. m. The children are preparing addresses and song.

O. I. Mairs is clearing a large tract of ground for planting potatoes. This is about the most profitable crop that can be planted.

Isaac Otis arrived attived at independence last Monday from Sonoma. He is looking around the Valley with a view to locating here.

D. Nerney came down from Fish Spring yesterday to secure medical attendance for his wife, who has been quite ill for some time past.

P. W. Forbes Esq. has been elected Representive of Inyo Lodge, No. 391 I. O. O. F., to the Grand Lodge which meets in San Francisco next May.

The *Index* says it is published in the interest of the people. The people are glad to know it. If it did not say so the people would never have found it out.

Smith, the popular livery man at Bishop, came down yesterday with a load of drummers. The latter gentry managed to smash their buggy at Big Pine, but no one was injured.

Billy Daugherty, well known to Inyoites and a former County Clerk, is at present employed as telegraph editor on the Reno *Gazette* and has recently been writing some interesting reminiscences of old times for that paper.

Word was brought from Darwin yesterday that Frank Fitzgerald had been elected Supervisor in the Fifth District. As the main industry of that section is mining, the election of Mr. Fitzgerald is very appropriate, for he has for many years been identified with mining ventures there. The miners will have an energetic representative in "Fitz".

A telegram was received at Big Pine yesterday announcing the death of Mrs. James Herod at Bakersfield. It is with great regret that we chronicle the death of this estimable lady. She resided in Big Pine for about three years and leaves a large circle of friends to lament her early taking away. Her parents, Mr. and Mrs. J. C. Crocker, left immediately for Bakersfield.

A Useful Member

Hon. C. H. Groves of Humboldt came down from Carson Saturday evening. He enjoys the reputation of having been a very useful and active member of the late Legislature, and one of the busiest members of that body. In addition to his legislative duties he acted as the Carson reporter for the *Gazette* and other papers of the State, and won for himself an enviable reputation for the correct and reliable manner in which he reported the proceedings of the Legislature. The *Gazette* takes pleasure in acknowledging the courtesies received from and rendered by him, and bespeaks for him a hearty reception when he returns to his constituents in Humboldt county.—*Reno Gazette.*

SOME FACTS ABOUT WEATHER FORECASTS.

The Branch Office of the National Weather Service, Division of the Pacific, was opened at San Francisco, March 1st, 1885, and is the only office of its kind in the country outside of the central office at Washington, D. C. It was established for the purpose of providing, in the most direct and practical manner, an opportunity for the people of the Pacific Coast to receive all of the benefits that may be derived from the work of the Signal Service. The main object was to prepare and distribute through the Press and by telegraph, weather forecasts for the Pacific Coast States, and warn vessels of the approach of storms dangerous to shipping off the coast. Also to make special forecasts of rain, frosts, floods and local storms. Such work had been carried on at the central office in Washington many years for the eastern portion of the United States, and it was believed that the time had come for the organization of a Pacific Coast Weather Service, with headquaters at the metropolis of the coast, and at a place centrally located for the convenient receipt and distribution of telegraphic reports. To properly apply the forecasts to definite areas of country the Pacific coast was divided into three districts, designated officially as follows: North Pacific Region (embracing western Oregon and western Washington). Middle Pacific Region (embracing the western portion of California north of parallel 37 degrees north, or an east and west line cutting the northern edge of the Bay of Monterey). South Pacific Region (embracing the western portion of California south of parallel 37 degrees north). On May 1st, 1886, an order was issued from Washington changthe districts to State areas, and thereafter the weather forecasts were made for the following regions: Washington (embracing the entire State). Oregon (embracing the entire State). Northern Califoraia (embracing that portion of the State north of the latitude of 35 degrees or an east and west line passing through the central portion of Lake Tulare). Southern California (embracing that portion of the State south of the latitude of 36 degrees.) There have been several changes in the hours at which the forecasts have been prepared for issue, dependent upon the hours of meteorological observation and the convenience of the Press. Observations are now taken throughout the United States at 8 a. m. and at 8 p. m., 75th meridian time, which corresponds to 5 a. m. and 5. p. m., Pacific time. The weather forecasts are issued from the San Francisco office about 9:30 a. m and 6:30 p. m. daily. An earlier hour cannot be selected because of the want of telegraphic facilities in concentrating the reports at San Francisco from all parts of the Pacific Coast States. The language of the forecasts must largely conform to the official instructions issued from the central office at Washington.

Forecasts of higher or lower temperature are made each morning with reference to the expected minimum temperature of the following morning, and each evening with reference to the maximum temperature expected on the following afternoon. The forecasts of stationary temperature indicate a change of four degrees or less from March to October inclusive, and six degrees or less for the remaining months of the year. In the cast of higher or lower temperature a change of one degree or more is sufficient to verify the forecast. A cold wave, in general terms, is defined to be a fall in temperature over an extensive area of 20 degrees in 24 hours or 20 degrees in 48 hours and to the freezing point or below. Warnings of cold waves are issued when it it is expected that the area affected will extend over 100,000 square miles in extent and in well defined cases for a lesser area; forecasts of fair weather mean an entire absence of rainfall but not necessarily an absence of clouds. Forecasts are usually made for a period of 24 hours, but whenever the meteorological conditions are so decided as to dominate the present and are expected to materially modify coming weather over any extensive part of the country, forecasts are made for periods of 36, 48 and 72 hours. Generally speaking, it is more difficult to forecast accurately the weather of summer than that of winter because of the absence in the former season of well defined storm-centers, most of the precipitation being the result of local changes in temperature and wind direction. For a similar reason it is more difficult to forecast the changes of a moderate storm than of those which attend a severe one, because in the latter case the laws of cyclonic development and progression are more closely adhered to, which permits the principle of weather forecasting to be applied with greater success.

JOHN P. FINLEY
Lieutenant 19th Infantry, S. C.

Improvement In Roadsters.

The Agricultural Fair has worked a marked improvement in our roadsters. Since the first Fair several trotting bred stallions have been brought into the Valley, and already their produce are showing up. In 1887 the free-for-all trot was won by Echo; time, 3:36. In 1888, by Ned; time, 3:20. In 1889, by George W. Patchen; time, 2:55. In 1890, by Fred B.; time, 2:44. These horses were all imported, but this year it is quite likely that the honor will rest with a home-bred colt. Truckee Jr. and Patsy will stand an equally good chance to walk off with the prize.

Grand Ball.

The Odd Fellows of Independence will give a grand ball at the Agricultural Pavilion on Monday evening, April 27th, in honor of the 72d anniversary of their order. By an arrangement made between the Lodges at Bishop and Independence the annual celebration is held alternately at the two places. Last year the Independence members were royally entertained at Bishop, and they will spare no effort nor expense to requite the honor. The large pavilion is an unexceptional floor for dancing, and the best music obtainable will be procured. The ball is free, and a cordial welcome extended to all. Free busses will be run from the depot to town to accomodate all who come by train.

Now is a golden opportunity to secure the finest piece of land under the Eastside canal. For the quality of it intending purchasers are referred to Superintendent McIver and the *Index*. Only six dollars an acre.

W. H. GEORGE, M. D.,
Physician and Surgeon,
Bishop Creek, Cal.,
Offers his professional services to the people of Bishop Creek and vicinity. Office and residence opposite Andrew Clark's.

P. H. MACK,
ATTORNEY-AT-LAW.
INDEPENDENCE, CAL.

MISCELLANEOUS.

For Sale!

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

FOR SALE CHEAP.

Two span first class work horses. Harnesses. Also three colts. Separately or in lots. No reasonable offer refused. Inquire of J. Vagt, Camp Independence.

ALIAS SUMMONS.

MARY A. BALL, Plaintiff, vs. ROBERT BALL, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Robert Ball, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony now existing between the Plaintiff and Defendant and for costs of suit, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief therein demanded.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 28th day of February, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
P. H. MACK, Attorney for Plaintiff.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2324 Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2324.

O. G. FUENTES.

Help yourself

if you're a suffering woman, with the medicine that's been prepared especially to help you—Dr. Pierce's Favorite Prescription. It will do it where others fail. For all the diseases peculiar to the sex—dragging-down pains, displacements, and other weaknesses, it's a *positive* remedy. It means a new life, and a longer one, for every delicate woman. In every case for which it's recommended, it gives satisfaction. It's *guaranteed* to do so, or the money is refunded.

It improves digestion, invigorates the system, enriches the blood, dispels aches and pains, produces refreshing sleep, dispels melancholy and nervousness, and builds up both flesh and strength. It is a legitimate *medicine*—not a beverage. Contains no alcohol to inebriate; no syrup or sugar to sour or ferment in the stomach and cause distress. As *peculiar* in its marvelous, remedial results as in its composition. Therefore, don't be put off with some worthless compound easily, but dishonestly, recommended to be "just as good."

A treasure which time cannot blot
Is matrimonial peace;
But he must be an argus—not
Who culls his golden fleece.

EMINENT TESTIMONY.

Mrs. Henry Ward Beecher writes:

"40 ORANGE ST., BROOKLYN, N. Y.,
Feb. 11, 1890.

"I have used ALLCOCK'S PLASTERS for some years for myself and family and, as far as able, for the many sufferers who come to us for assistance, and have found them a genuine relief for most of the aches and pains which flesh is heir to. I have used ALLCOCK'S PLASTERS for all kind of lameness and acute pain and, by frequent experiments, find that they can control many cases not noticed in your circulars.

"The above is the only testimonial I have ever given in favor of any plaster, and if my name has been used to recommend any other it is without my authority or sanction."

Nothing Like Success—Success is the card that wins. Even the successful fool is applauded, while the philosopher who fails is hissed.

Throat Diseases commence with a Cold, Cough, or over-fatiguing the voice. These symptoms (which, if neglected, often result in a chronic trouble of the Throat) are allayed by the use of "*Brown's Bronchial Troches.*"

Too Tonic—"Why do you object to German opera? It is full of vigor; it brees me right up." "That's my objection to it; it is Teutonic."

THE PACIFIC BANK

Has issued its quarter Centennial statement, which is indeed an interesting circular, and proves in figures that the past year has been the most prosperous one the BANK has ever had, with a capital of $1,000,000, and surplus of $800,000. It is a matter upon which all Californians may be congratulated, that the Bank still has the same able and conscientious President, Dr. R. H. McDonald.

Doubts gather thickly, like bees from a hive,
When the other man answers, "Well, I'll raise it five."

Dr. Wallace Ely has removed his offices to 215 Powell St., San Francisco, Cal., where he continues to give special attention to Kidneys, Bladder, Prostate Gland and all diseases arising therefrom. Diabetes and Bright's Disease treated according to the latest approved methods. Most cases can be treated successfully by correspondence. Consultations daily from 10 A. M. to 4 P. M. WALLACE ELY, M. D., 215 Powell St., 4 doors from Geary St., San Francisco, Cal.

Ancestry is like homœopathic medicine, the older it is diluted the greater the potency.

All that we can say as to the merits of Doobins' Electric Soap, prides into *nothingness* before the story it will tell you *itself*, of its own *perfect* quality, if you will give it *one* trial. Don't take imitation. There are lots of them.

Second Sight—"Theirs was a case of love at first sight." "Why didn't they marry?" "They changed their minds at second sight."

Try Germea for Breakfast.

THAT'S IT.

St. Jacobs Oil The Great Remedy CURES RHEUMATISM.

18 Hill Street,
San Francisco, Cal.,
April 23, 1890.

"Having been severely afflicted with rheumatism, my mother and daughter with sore throat, we have, by the use of St Jacobs Oil, been cured."

CHAPTER VIII.

"Can I do any work for you, Bebee?" said black Jeannot in the daybreak, pushing her gate open timidly with one hand.

"There is none to do, Jeannot. They want so little in this time of the year—the flowers," said she, lifting her head from the sweet peas she was tying up to their sticks.

The woodman did not answer; he leaned over the half open wicket, and swayed it backward and forward under his bare arm. He was a good, harmless, gentle fellow swarthy as charcoal and simple as a child, and quite ignorant; having spent all his days in the great Soignies forests making fagots when he was a little lad, and hewing down trees or burning charcoal as he grew to manhood.

"Who was that seigneur with you last night, Bebee?" he asked, after a long silence, watching her as she moved.

Bebee's eyes grew very soft, but they looked up frankly.

"I am not sure—I think he is a painter—a great painter prince, I mean—as Rubes was in Antwerpen; he wanted roses the night before last in the cathedral."

"Who was that seigneur with you last night, Bebee?"

"But he was walking with you?"

"He was in the lane as I came home last night—yes."

"What does he give you for your roses?"

"Oh—he pays me well. How is your mother this day, Jeannot?"

"You do not like to talk of him?"

"Why should you want to talk of him?—he is nothing to you."

"Did you really see him only two days ago, Bebee?"

"Oh, Jeannot!—did I ever tell a falsehood?—you would not say that to one of your little sisters."

The forester swayed the gate to and fro drearily under his folded arms.

Bebee, not regarding him, cut her flowers, and filled her baskets, and did her other work, and set a ladder against the hut and climbed on its low roof to seek for eggs, the hens having green tastes sometimes for the rushes and lichens of its thatch. She found two eggs, which she promised herself to take to Annemie, and looking round as she sat on the edge of the roof, with one foot on the highest rung of the ladder, saw that Jeannot was still at the gate.

"You will be late in the forest, Jeannot," she cried to him. "It is such a long, long way in and out. Why do you look so sulky? and you are kicking the wicket to pieces."

"I do not like you to talk with strangers," said Jeannot, sullenly and sadly.

Bebee laughed as she sat on the edge of the thatch, and looked at the shining gray skies of the early day, and the dew wet garden, and the green fields beyond, with happy eyes that made the familiar scene transfigured to her.

"Oh, Jeannot, what nonsense! As if I do not talk to a million strangers every summer! as if I could ever sell a flower if I did not! You are cross this morning—that is what it is."

"Do you know the man's name?" said Jeannot, suddenly.

Bebee felt her cheeks grow warm as with some noonday heat of sunshine. She thought it was with anger against blundering Jeannot's curiosity.

"No! and what would his name be to us, if I did know it? I cannot ask people's names because they buy my roses."

"As if it were only roses!"—

There was the length of the garden between them, and Bebee did not hear as she sat on the edge of her roof with that light dreamful enjoyment of air and sky and coolness, and all the beauty of the dawning day, which the sweet vague sense of a personal happiness will bring with it to the dullest and the coldest.

"You are cross, Jeannot, that is what it is," she said after awhile. "You should not be cross; you are too big and strong and good. Go in and get my bowl of bread and milk for me, and hand it to me up here. It is so pleasant. It is as nice as being perched on an apple tree."

Jeannot went in obediently and handed up her breakfast to her, looking at her with shy, worshiping eyes. But his face was overcast, and he sighed heavily as he took up his hatchet and turned away; for he was the sole support of his mother and sisters, and if he did not do his work in Soignies they would starve at home.

"You will be seeing that stranger again?" he asked her.

"Yes!" she answered, with a glad triumph in her eyes; not thinking at all of him as she spoke. "You ought to go, Jeannot, now, you are so late. I will come and see your mother to-morrow. And do not be cross, you dear big Jeannot. Days are too short to snip them up into little bits by bad temper; it is only a stupid sheep shearer that spoils the fleece by snapping at it sharp and hard—that is what Father Francis says."

Bebee having delivered her little piece of wisdom, broke her bread into her milk and ate it, lifting her face to the fresh winds and tossing crumbs to the wheeling swallows, and watching the rose bushes nod and toss below in the breeze, and thinking vaguely how happy a thing it was to live.

Jeannot looked up at her, then went on his slow, sad way through the wet lavender shrubs and the opening buds of the lilies.

"You will only think of that stranger, Bebee, never of any of us—never again," he said, and wearily opened the little gate and went through it, and down the daybreak stillness of the lane. It was a foolish thing to say; but when were lovers ever wise?

Bebee did not heed; she did not understand herself or him; she only knew that she was happy; when one knows that, one does not want to seek much further.

CHAPTER IX.

Her stranger from Rubes' land was a great man in a certain world. He had become great when young, which is perhaps a misfortune. It indisposes men to be great at their maturity. He was famous at 20, by a picture hectic in color, perfect in drawing, that made Paris at his feet. He became more famous by verses, by plays, by political follies and by social successes. He was faithful, however, to his first love in art. He was a great painter, and year by year proved afresh the cunning of his hand. Purists said his pictures had no soul in them. It was not wonderful if they had none. He always painted soulless vice; indeed, he saw very little else.

One year he had some political trouble. He wrote a witty pamphlet that hurt where it was perilous to aim. He laughed and crossed the border, riding into the green Ardennes one sunny evening. He had a name of some power and sufficient wealth, he did not fear long exile. Meanwhile he told himself he would go and look at Scheffer's Gretchen.

The King of Thule is better, but people talk most of the Gretchen. He had never seen either.

He went in leisurely, traveling up the bright Meuse river, and across the monotony of the plains, then green with wheat a foot high, and musical with the many bells of the Easter kermesses in the quaint old world villages.

There was something so novel, so sleepy, so harmless, so mediæval, in the Flemish life, that it soothed him. He had been swimming all his life in salt sea fed rapids, this sluggish, dull canal water, mirroring between its rushes a life that had scarcely changed for centuries, had a charm for him.

He stayed awhile in Antwerpen. The town is ugly and beautiful; it is like a dull, quaint grès de Flandre jug, that has precious stones set inside its rim. It is a burger ledger of bales and barrels, of sale and barter, of loss and gain, but in the heart of it there are illuminated leaves of missal vellum, all gold and color, and monkish story and heroic ballad, that could only have been executed in the days when art was a religion.

He gazed himself into an homage of Rubens, whom before he had slighted, never having known (for, unless you have seen Antwerp, it is as absurd to say that you have seen Rubens as it is to think that you have seen Murillo out of Seville, or Raffaelle out of Rome); and he studied the Gretchen carefully, delicately, sympathetically, for he loved Scheffer, but, though he tried, he failed to care for her.

"She is only a peasant, she is not a poem," he said to himself, "I will paint a Gretchen for the Salon of next year."

But it was hard for him to portray a Gretchen. All his pictures were Phryne—Phryne in triumph, in ruin, in a palace, in a poorhouse, on a bed of roses, on a hospital mattress, Phryne laughing with a belt of jewels about her supple waist, Phryne lying with the stones of the dead house under her naked limbs—but always Phryne. Phryne, who living had death in her smile, Phryne, who lifeless had blank despair on her face; Phryne, a thing that lived furiously every second of her days, but Phryne a thing that once being dead was carrion that could never live again.

Phryne has many painters in this school, as many as Catherine and Cecilia had in the schools of the Renaissance, and he was chief amidst them.

How could he paint Gretchen if the pure Scheffer missed? Not even if, like the artist monks of old, he steeped his brushes all Lent through in holy water.

And in holy water he did not believe.

One evening, having left Antwerpen ringing its innumerable bells over the grave of its dead Art, he leaned out of the casement of an absent friend's old palace in the Brabant street that is named after Mary of Burgundy; an old casement crusted with quaint carvings and gilded round in Spanish fashion with many gargoyles and griffins and illegible scutcheons.

Leaning there, wondering with himself whether he would wait awhile and paint quietly in this dim street, haunted with the shades of Memling and Maes, and Otto Veneris and Philip de Champagne, or whether he would go into the east and seek new types, and lie under the red Egyptian heavens and create a true Cleopatra, which no man has ever done yet—a young Cleopatra, ankle deep in roses and fresh from Cæsar's kisses—leaning there, he saw a little peasant go by below, with two little white feet in two wooden shoes, and a face that had the pure and simple radiance of a flower.

"There is my Gretchen," he thought to himself, and went down and followed her into the cathedral. If he could get what was in her face he would get what Scheffer could not.

A little later, walking by her in the green lanes, he meditated: "It is the face of Gretchen, but not the soul—the Red Mouse has never passed this child's lips. Nevertheless"—

"Nevertheless"—he said to himself and smiled.

For he, the painter all his life long of Phryne living and of Phryne dead, believed that every daughter of Eve either vomits the Red Mouse or swallows it.

It makes so little difference which—either way the Red Mouse has been there.

And yet, strolling there in the dusky red of the evening, towards this little rush covered hut, he forgot the Red Mouse and began vaguely to see that there are creatures of his mother's sex from whom the beast of the Brocken slinks away.

But he still said to himself, "Nevertheless."

"Nevertheless," for he knew well that when the steel cuts the silk, when the hound hunts the fawn, when the snake wooes the bird, when the king covets the vineyard, there is only one end possible at any time. It is the strong against the weak, the fierce against the feeble, the subtle against the simple, the master against the slave, there is no equality in the contest, and no justice—it is merely inevitable, and the issue of it is written.

CHAPTER X.

The next day she had her promised book hidden under the vine leaves of her empty basket as she went homeward, and though she had not seen him very long or spoken to him very much, she was happy.

The golden gates of knowledge had just opened to her, she saw a faint, far off glimpse of the Hesperides gardens within, of the dragon she had never heard, and had no fear.

"Might I know your name?" she had asked him wistfully, as she had given him the rose bud, and taken the volume in return that day.

"They call me Flamen."

"It is your name?"

"Yes, for the world. You must call me Victor, as other women do. Why do you want my name?"

"Jeannot asked it of me."

"Oh, Jeannot asked it, did he?"

"Yes; besides," said Bebee, with her eyes very soft and very serious, and her happy voice hushed, "besides, I want to pray for you of course, every day; and if I do not know your name, how can I make Our Lady rightly understand? The flowers know you without a name, but she might not, because so very many are always beseeching her, and you see she has all the world to look after."

He had looked at her with a curious look, and had bade her farewell, and let her go home alone that night.

Her work was quickly done, and by the light of the moon she spread her book on her lap in the porch of the hut and began her new delight.

The children had come and pulled at her skirts and begged her to play. But Bebee had shaken her head.

"I am going to learn to be very wise, dear," she told them. "I shall not have time to dance or to play."

"But people are not merry when they are wise, Bebee," said Franz, the biggest boy.

"Perhaps not," said Bebee, "but one cannot be everything, you know, Franz."

"But surely you would rather be merry than anything else?"

"I think there is something better, Franz. I am not sure. I want to find out; I will tell you when I know."

"Who has put that into your head, Bebee?"

"The angels in the cathedral," she told them; and the children were awed and left her, and went away to play blind man's buff by themselves, on the grass by the swan's water.

"But for all that the angels have said it," said Franz to his sisters, "I cannot see what good it will be to her to be wise, if she will not care any longer afterwards for almond ginger bread and currant cake."

It was the little tale of "Paul and Virginia" that he had given her to begin her studies with, but it was a grand copy, full of beautiful drawings nearly at every page.

It was hard work for her to read at first, but the drawings enticed and helped her, and she soon sank breathlessly into the charm of the story. Many words she did not know; many passages were beyond her comprehension; she was absolutely ignorant, and had nothing but the force of her own fancy to aid her.

But though stumbling at every step, as a lame child through a flowery hillside in summer, she was happy as the child would be, because of the sweet, strange air that was blowing about her, and the blossoms that she could gather into her hand, so rare, so wonderful, and yet withal so familiar, because they were blossoms.

"I am going to learn to be very wise, dear."

With her fingers buried in her curls, with her book on her knee, with the moon rays white and strong on the page, Bebee sat entranced as the hours went by; the children's play shouts died away; the babble of the gossip at the house doors ceased; people went by and called good night to her; the little huts shut up one by one, like the white and purple convolvulus cups in the hedges.

Bebee did not stir, nor did she hear them; she was deaf even to the singing of the nightingales in the willows, where she sat in her little dark porch, with the ivy dropping from the thatch above, and the wet garden ways beyond her.

A heavy step came tramping down the lane. A voice called to her:

"What are you doing, Bebee, there this time of the night? It is on the strike of twelve."

She started as if she were doing some evil thing, and stretched her arms out and looked around with blinded, wondering eyes, as if she had been rudely wakened from her sleep.

"What are you doing up so late?" asked Jeannot; he was coming from the forest in the dead of night to bring food for his family; he lost his sleep thus often, but he never thought that he did anything except his duty in those long, dark, tiring tramps to and fro between Soignies and Laeken.

Bebee shut her book and smiled with dreaming eyes, that saw him not at all.

"I was reading—and, Jeannot, his name is Flamen for the world—but I may call him Victor."

"What do I care for his name?"

"You asked it this morning."

"More fool I. Why do you read? Reading is not for poor folk like you and me."

Bebee smiled up at the white, clear moon that sailed above the woods.

She was not awake out of her dream. She only dimly heard the words he spoke.

"You are a little peasant," said Jeannot roughly, as he paused at the gate. "It is all you can do to get your bread. You have no one to stand between you and hunger. How will it be with you when the slug gets your roses, and the snail your carnations, and your hens die of damp, and your lace is all wove awry, because your head runs on reading and folly, and you are spoilt for all simple pleasures and for all honest work?"

She smiled, still looking up at the moon, with the drooping ivy touching her hair.

"You are cross, dear Jeannot. Good night."

A moment afterwards the little rickety door was shut, and the rusty bolt drawn within it; Jeannot stood in the cool summer night all alone, and knew how stupid he had been in his wrath.

He leaned on the gate a minute; then crossed the garden as softly as his wooden shoes would let him. He tapped gently on the shutter of the lattice.

"Bebee—Bebee—just listen. I spoke roughly, dear—I know I have no right. I am sorry. Will you be friends with me again?—do be friends again."

She opened the shutter a little way, so that he could see her pretty mouth speaking.

"Oh, Jeannot, what does it matter? Yes, we are friends—we will always be friends, of course—only you do not know. Good night."

He went away with a heavy heart and a long drawn step. He would have preferred that she should have been angry with him.

Bebee, left alone, let the clothes drop off her pretty round shoulders and her rosy limbs, and shook out her coils of hair, and kissed the book, and laid it under her head, and went to sleep with a smile on her face.

Only, as she slept, her fingers moved as if she were counting her beads, and her lips murmured:

"Oh, dear Holy Mother, you have so much to think of—yes, I know—all the poor, and all the little children. But take care of him; he is called Flamen, and he lives in the street of Mary of Burgundy; you cannot miss him; and if you will look for him always, and have a heed that the angels never leave him, I will give you my great cactus flower—my only one—on your feast of Roses, this very year. Oh, dear Mother, you will not forget!"

(TO BE CONTINUED.)

The Author of Lorna Doone.

R. D. Blackmore lives in great retirement at his pretty villa residence, "Shortwood," close to Teddington station, which latter place, by the way, is an innovation not at all to the taste of the veteran novelist, who built his home before the station existed, and now regrets its proximity. Mr. Blackmore's hobby is his garden. In front there is a trimly kept lawn, surrounded by flourishing beds where rhododendrons, picotees, roses of every hue and old fashioned country flowers vie with each other in abundance. Behind is the fruitful orchard, his great pride, where strawberries, currants, stone fruits, pears and apples are to be found in such plenty that much of it is sold in the fruit markets.

It has always been Mr. Blackmore's custom to work a few hours daily in his garden, and this seems to be his favorite recreation. Mr. Blackmore is now over 70 years of age, and a widower. His two nieces reside with him. In figure he is rather short and thick set, with white hair and whiskers; his face is strongly lined, and the blue eyes and bushy eyebrows are very characteristic. He reminds one somewhat of "Uncle Corny" in his latest work, "Kit Kitty," the hero of which, strangely enough, is a market gardener living at one of the river villages a little higher up than Teddington.—Toronto Mail.

A Brief Wedding.

A certain Georgia editor, who is also a real estate agent, a building and loan association director, an attorney at law, clerk of the town council and pastor of the village church, was recently asked to marry a couple. He was in a great hurry, and the couple surprised him in the middle of a heavy editorial on the tariff. "Time is money," said he, without looking up from his work. "Do you want her?" The man said yes. "And do you want him?" The girl stammered an affirmative. "Man and wife," cried the editor. "One dollar. Bring me a load of wood for it—one-third pine, balance oak."—Atlanta Constitution.

EXCITEMENT IN ROCHESTER.

The Commotion Caused by the Statement of a Physician.

An unusual article from the Rochester N. Y. *Democrat and Chronicle*, was recently republished in this paper and was a subject of much comment. That the article caused even more commotion in Rochester, the following from the same paper shows:

Dr. J. B. Henion, who is well-known not only in Rochester but in nearly every part of America, sent an extended article to this paper, a few days since which was duly published, detailing his remarkable experience and rescue from what seemed to be certain death. It would be impossible to enumerate the personal enquiries which have been made at our office as to the validity of the article, but they have been so numerous that further investigation of the subject was deemed necessary.

With this end in view a representative of this paper called on Dr. Henion at his residence, when the following interview occurred: "That article of yours, Doctor, has created quite a whirlwind. Are the statements about the terrible condition you were in, and the way you were rescued such as you can sustain?"

"Every one of them and many additional ones. I was brought so low by neglecting the first and most simple symptoms. I did not think I was sick. It is true I had frequent headaches; felt tired most of the time; could eat nothing one day and was ravenous the next; felt dull pains and my stomach was out of order, but I did not think it meant anything serious.

"The medical profession has been treating symptoms instead of diseases for years, and it is high time it ceased. The symptoms I have just mentioned or any unusual action or irritation of the water channels indicate the approach of kidney disease more than a cough announces the coming of consumption. We do not treat the cough, but try to help the lungs. We should not waste our time trying to relieve the headache, pains about the body or other symptoms, but go directly to the kidneys, the source of most of these ailments."

"This, then, is what you meant when you said that more than one-half the deaths which occur arise from Bright's disease, is it Doctor?"

"Precisely. Thousands of diseases are torturing people to-day, which in reality are Bright's disease in some of its many forms. It is a Hydra-headed monster, and the slightest symptoms should strike terror to every one who has them. I can look back and recall hundreds of deaths which physicians declared at the time were caused by paralysis, apoplexy, heart disease, pneumonia, malarial fever and other common complaints which I see now were caused by Bright's disease."

"And did all these cases have simple symptoms at first?"

"Every one of them, and might have been cured as I was by the timely use of the same remedy. I am getting my eyes thoroughly opened in this matter and think I am helping others to see the facts and their possible danger also."

Mr. Warner, who was visited at his establishment on N. St. Paul street, spoke very earnestly:

"It is true that Bright's disease had increased wonderfully, and we find, by reliable statistics, that from '70 to '80 its growth was over 250 per cent. Look at the prominent men it has carried off, and is taking off every year, for while many are dying apparently of paralysis and apoplexy, they are really victims of kidney disorder, which causes heart disease, paralysis, apoplexy, etc. Nearly every week the papers record the death of some prominent man from this scourge. Recently, however, the increase has been checked and I attribute this to the general use of my remedy."

"Do you think many people are afflicted with it to-day who do not realize it, Mr. Warner?"

"A prominent professor in a New Orleans medical college was lecturing before his class on the subject of Bright's disease. He had various fluids under microscopic analysis and was showing the students what the indications of this terrible malady were. 'And now, gentlemen,' he said, 'as we have seen the unhealthy indications, I will show you how it appears in a state of perfect health,' and he submitted his own fluid to the usual test. As he watched the results his countenance suddenly changed—his color and command both left him and in a trembling voice he said: 'Gentlemen, I have made a painful discovery; I have Bright's disease of the kidneys;' and in less than a year he was dead. The slightest indications of any kidney difficulty should be enough to strike terror to any one."

"You know of Dr. Henion's case?"

"Yes, I have both read and heard of it."

"It is very wonderful is it not?"

"No more so than a great many others that have come to my notice as having been cured by the same means."

"You believe then that Bright's disease can be cured."

"I know it can. I know it from my own and the experience of thousands of prominent persons who were given up to die by both their physicians and friends."

"You speak of your own experience, what was it?"

"A fearful one. I had felt languid and unfitted for business for years. But I did not know what ailed me. When, however, I found it was kidney difficulty I thought there was little hope and so did the doctors. I have since learned that one of the physicians of this city pointed me out to a gentleman on the street one day, saying: 'there goes a man who will be dead within a year.' I believe his words would have proved true if I had not fortunately used the remedy now known as Warner's Safe Cure."

"Did you make a chemical analysis of the case of Mr. H. H. Warner some three years ago, Doctor? was asked Dr. S. A. Lattimore, one of the analysts of the State Board of Health."

"Yes, sir."

"What did this analysis show you?"

"A serious disease of the kidneys."

"Did you think Mr. Warner could recover?"

"No, sir, I did not think it possible."

"Do you know anything about the remedy which cured him?"

"I have chemically analyzed it and find it pure and harmless."

The standing of Dr. Henion, Mr. Warner and Dr. Lattimore in the community is beyond question, and the statements they make cannot for a moment be doubted. Dr. Henion's experience shows that Bright's disease of the kidneys is one of the most deceptive and dangerous of all diseases, that it is exceedingly common, but that it can be cured if taken in time.

"So you imagine the next world will be much like this one?" "Why, yes. There will be lots of red-hot politicians there, I imagine."

VALUABLE DISCOVERY FOR THE BLIND.

Dr. La Grange wishes to make known his *New Treatment* for the cure of all diseases of the Eye: —*Cataract, Defective Vision, Inflammation*, etc., etc., without Operation or Pain. The remedy can be applied by the patient, and is simple, safe and sure in its effects, strengthening the muscles and nerves of the eye, removing pain almost instantaneously. It is a marvelous discovery and a blessing to the sufferer.

For further particulars address with stamped envelope, R. J. LA GRANGE, M. D., 215 Powell St., fourth door from Geary, San Francisco, Cal.
Office Hours, 11 till 3.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay; and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

Broken hearts are never dangerous as long as dinner tastes good.

DISORDERS WHICH AFFECT THE KIDNEYS

Are among the most formidable known. Diabetes, Bright's disease, gravel and other complaints of the urinary organs are not ordinarily cured in severe cases, but they may be averted by timely medication. A useful stimulant of the urinary glands has ever been found in Hostetter's Stomach Bitters, a medicine which not only affords the requisite stimulous when they become inactive, but increases their vigor and secretive power. By increasing the activity of the kidneys and bladder, this medicine has the additional effect of expelling from the blood impurities which it is the peculiar office of those organs to eliminate and pass off. The Bitters is also a purifier and strengthener of the bowels, an invigorant of the stomach, and a matchless remedy for biliousness and fever and ague. It counteracts a tendency to premature decay, and sustains and comforts the aged and infirm.

Life is a lottery; and the man who takes no chances in it can never win anything.

HOW'S THIS!

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by taking Hall's Catarrh Cure.

F. J. CHENEY & CO., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price 75c. per bottle. Sold by all Druggists.

"Thrice is he armed who hath his quarrel just"—
Nor needs he armour if he will but "dust!"

Dr. Price's Cream Baking Powder.

A Pure Cream of Tartar Powder.
Superior to every other known.
Used in Millions of Homes—
40 Years the Standard.
Delicious Cake and Pastry, Light Flaky Biscuit, Griddle Cakes, Palatable and Wholesome.
No other baking powder does such work.

PATENT ATTORNEY, E. T. FENWICK, Tacoma, Wash., and Washington, D. C. Correspondence invited.

PENSION! LAND AND INDIAN DEPREDATION CLAIMS. Special attention given to the above. NATHAN BICKFORD, Solicitor of Claims, Washington, D. C. References furnished in any state. Blanks and information *free*.

TOWER'S FISH BRAND. This Trade Mark is on The Best Waterproof Coat in the world. Send for Illustrated Catalogue. A. J. Tower, Boston.

BIG G. Cures in 1 to 5 DAYS. Guaranteed not to cause Stricture. Mf'd only by THE EVANS CHEMICAL CO. CINCINNATI, O. U. S. A. Trade Mark. Big G is the acknowledged leading remedy for all the unnatural discharges and private diseases of men. A certain cure for the debilitating weakness peculiar to women. I prescribe it and feel safe in recommending it to all sufferers. A. J. STONER, M. D., DECATUR, ILL. Sold by Druggists. PRICE $1.00.

EVERY SKIN, SCALP, & BLOOD DISEASE Cured by Cuticura

EVERY SKIN AND SCALP DISEASE whether torturing, disfiguring, humiliating itching, burning bleeding, scaly, crusted, pimply, or blotchy, with loss of hair, from pimples to the most distressing eczemas, and every humor of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. This is strong language, but true. Thousands of grateful testimonials from infancy to age attest their wonderful, unfailing and incomparable efficacy.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass. Send for "How to Cure Skin and Blood Diseases."

Pimples, Blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Rheumatism, Kidney Pains, and Muscular Weakness relieved in one minute by the CUTICURA ANTI-PAIN PLASTER. 25c.

JUST PUBLISHED—ENTIRELY NEW.

WEBSTER'S INTERNATIONAL DICTIONARY

A GRAND INVESTMENT
for the Family, the School, or the Library.
Revision has been in progress for over 10 Years. More than 100 editorial laborers employed. $300,000 expended before first copy was printed. Critical examination invited. Get the Best. Sold by all Booksellers. Illustrated pamphlet free.
G. & C. MERRIAM & CO., Publishers, Springfield, Mass., U. S. A.

Caution!—There have recently been issued several cheap reprints of the 1847 edition of Webster's Unabridged Dictionary, an edition long since superannuated. These books are given various names,—"Webster's Unabridged," "The Great Webster's Dictionary," "Webster's Big Dictionary," "Webster's Encyclopedic Dictionary," etc., etc.

Many announcements concerning them are very misleading, as the body of each, from A to Z, is 44 years old, and printed from cheap plates made by photographing the old pages.

PRESERVED IN STONE.

One of the Mysteries of the South Seas.

RECORDS OF A PREHISTORIC PEOPLE.

The Wonders of Easter Islands.—Massive Ruins.

The Caroline islands, which are now recognized as belonging to Spain, though the Germans tried to annex them a few years ago, form one of the largest archipelagos of the Pacific, covering a sea area of more than 2,000 miles, and comprising over 500 separate fragments of land. Some of these islets are mere rocks, many are uninhabited and a few are very populous. Excepting those at the eastern end of the chain, and the large island of Yap at the western end, they have been rarely, some of them never, visited by white men, unless in the dubious form of "beach combers."

Kusaie, sometimes called Strong island, is about fifty miles in circumference, is of basaltic formation, has a large extent of high ground, and boasts of two excellent harbors. The people are reputedly industrious and peaceable—for South Sea islanders—and they have a king of their own. They belong, to all appearance, to the Polynesian race, but travelers have declared that they seem capable of a higher civilization than the average Polynesian. It is remarkable that the chiefs communicate by signs and speech not understood by the common people.

LITTLE EASTER ISLAND.

If we traverse some few thousand miles of ocean to the very eastern outskirts of Polynesia we shall find the little island called Easter island, which is barely ten miles long by four miles broad, which has no trees, no running water, and very little about it to attract settlers. It is of volcanic origin, and one of the extinct craters is over 1,000 feet high.

Yet this physically uninteresting island, peopled by Polynesians of the fair type, such as are found in the Society islands, is the greatest mystery of the Pacific. It is covered with remains of some prehistoric people of whom every record but that preserved in stone seems to have vanished.

At the southwest end of this little island there are to be found the ruins of nearly a hundred stone houses, built in regular lines and facing the sea. The walls of these houses are five feet thick and over five feet high, built of layers of flat stones and lined inside with flat slabs. Internally the houses measure about forty feet long by thirteen feet wide, and they are roofed over with slabs overlapping like tiles. The inside walls are painted in three colors—red, black and white—with figures of birds and mystic beasts and faces and geometrical figures. In one of these houses was found a curious stone statue eight feet high and weighing about four tons, which is now in the British museum.

The sea cliffs near this ancient settlement are carved into grotesque shapes not unlike the paintings on the walls, and the coast is marked with hundreds of these strange sculptures.

Again, on each headland of the island there is an enormous stone platform, built of hewn blocks of great size, fitted together without cement. They are built on sloping ground, presenting on the seaward side a wall face twenty or thirty feet high and two or three hundred feet long, and on the landward side a wall of about three feet in height rising from a level terrace.

These platforms have evidently had to do with the religious practices of the early settlers, whoever they were; for upon all of them are large stone pedestals which have supported images, and on some of them broken images are still to be seen. On one platform fifteen images were found, in size ranging from three to thirty-five feet in height. They are of human shape, representing the upper part of the body only, with arms and hands close to the sides. The heads are cut flat to allow of crowns being placed on them, which crowns seem to have been made, not of the same material as the statues, but of red tufa. This has been traced to an extinct crater within a few miles of the houses, and on the brink of this crater a large number of crowns were found, finished and ready for removal before some strange fate depeopled the island of these ancient worshipers.

The images themselves are made of gray lava, which is only found at quite another crater at the other end of the island. At this crater, called Otouli, there are several finished and partly finished images, just as they were left by the workmen. It is remarkable that the present natives have small wooden images carved out of a hard, dark wood, but these images are hideous and differ altogether from the dignified statues of the platforms.

The present inhabitants are simply tattooed savages, who are more than suspected to have a taste for cannibalism. They live in long, low houses, in shape like an upturned canoe, with only a single opening about two feet square, wholly unlike the massive stone villages we have described. There may have been wood on the island at one time, for the natives are well provided with clubs and spears, and they also use a double headed paddle which has not been observed elsewhere in the Pacific. But, on the other hand, they may have brought these implements with them, for they have a tradition that their great-great-grandfathers emigrated from the island of Rapaiti, about 2,000 miles away, and just south of the Austral group. Be this as it may, they call their present abode Rapahui, or Great Rapa, to distinguish it from what they call their former home.—Cassell's Magazine.

When grapes are served do not spit out the stones, but eject them from the mouth into the half closed hands, from whence they should be transferred as unostentatiously as possible to the plate.

THE SECRET MOURNER.

They bore him on to his grave in the heart of the busy town;
And with furtive footsteps following I watched them lay him down:
The mourners, many and sad—though they wept there one and all,
The tears that fell were as naught to mine, that could not fall.

We loved each other dearly, in a day that is distant now,
But something got to his ear, and he suddenly changed somehow—
A something got to his ear, I never could gather what—
And he kept away from thence, and his love for me was not.

I hid my grief in my heart, and bore it as best I might;
There was never darkness yet but had some relieving light;
And I found a balm in the thought that, although his love was gone,
I could follow him secretly, and in secret still love on.

And this I've done through the years that have come and gone since then
(So far the love of women surpasses the love of men);
I've hung on his track to the last, for I only ceased today,
And from his grave in the town I turned in my woe away.

Earth now looks lone in my eyes, yet I am not all cast down;
I have firm faith that at last I shall somewhere grasp Love's crown!
That when the end shall have come, whatever is good and true
Will receive its just reward, and a love like mine its due.

—James Dawson.

Glycerine as a Wool Preservative.

In order to make wool tissues water proof manufacturers have to expose the fabric to temperatures as high as 266 to 284 degs. Fahrenheit, and it has been found that the tissue thus treated loses all its resistance. Up to 230 degs. there is no change in wool or woolen goods, but when heated to 266 degs. or above both turn yellow and show evidences of combustion. By a series of experiments Mr. J. Perzog, an eminent French analytical chemist, has discovered a new process by means of which wool threads and fabrics may be made to retain their durability and original resistance under high temperature during the process of manufacture.

Acting upon the established fact that glycerine greatly prevents evaporation of humidity, Mr. Perzog saturated some woolen fabrics with a solution containing 10 per cent. of glycerine, and exposed them to high temperatures. The fabrics thus treated showed not the slightest change under a temperature of 284 degs. Fahrenheit, and they retained 13 per cent. of the glycerine. The discovery of this simple principle removes one of the greatest difficulties with which manufacturers of waterproof fabrics have had to contend.—Philadelphia Record.

About Torpedo Boats.

The next most important thing to speed in a torpedo boat is the quick turning, and for this purpose the larger Normand, Schicau and Yarrow boats have two rudders, one in the usual place at the stern and one under the bow. Mr. Thornycroft has another device. He puts two curved rudders near the stern and the propeller is between them, so that when the rudders are turned together, the water which the propeller is driving astern is turned a little to one side and helps to push around the boat.

The latest idea in torpedo boats is to have their launching tubes mounted on turn tables on deck instead of being fixed in the bow. With this improvement a boat will not have to steam straight at her enemy, stop, launch its torpedo and then turn to run away; but it can train its tube on the big ship as if the tube were a gun, and launch the torpedo while rushing past at full speed. This would be less dangerous for the torpedo boat, for it would not afford the men on the ship a good aim at her.—John M. Ellicott, U. S. N., in St. Nicholas.

An Odd Coincidence.

An old friend (call him W.) relates how, while he was in Florida, his watch stopped. Since it was a very good watch and had never stopped before, and had been duly wound the evening before, W. was much surprised that it wouldn't go. By and by the head of the house (call him B.) came in. "Will you please give me the time?" said W. "Certainly," said B., and pulled out his watch. B. had a timepiece which was entirely trustworthy, not given to irregularities of any kind. He pulled it out of his pocket. "By Jove!" he exclaimed, "my watch is stopped; that's queer." They compared the two watches, and they had stopped at the same hour and at the same minute, and why they had stopped neither man was able to discover.—Boston Transcript.

A Clever Youngster.

Little Kitty Clover is the most brazen of beggars.

"Grandma, will you please lend me your gold beads?" she asked, for perhaps the seventh time that week.

Grandma patiently took them from the drawer, and said, with her usual mildness, as she gave them to the child:

"Try not to ask for them any oftener than you can help, Kitty."

"No'm," said Kitty, adding, as a clever solution of the difficulty occurred to her, "If you don't like to lend 'em, grandma, you could give 'em to me and then I needn't ask!"—Youth's Companion.

First Settlers of Virginia.

Dr. Stephen B. Weeks, of Johns Hopkins university, has made a special study of the early Virginia settlements under Sir Walter Raleigh. He maintains that it can be shown by legendary and historical evidence that the earliest English settlers in the New World were not massacred, as is generally supposed, but were absorbed by the tribe of Croatan Indians, and their descendants are still to be found in North Carolina.—Baltimore American.

Misnamed.

"Misfit photographs for sale!" is written up over the door of a certain photographer's. Why "misfits?" One might be more inclined to set them down as mis-takes!—Judy.

THE CATTLE INDUSTRY.

The Methods of the Irrepressible Cowboy.

RECOLLECTIONS OF THE GOOD OLD TIMES.

"Texas Runs" and "Round ups"—Losses of a Hard Winter.

The progress and success of the cattle industry in the west has been marvelous. For many years the business was conducted almost entirely by individuals, and so widened and prospered that in a few years the cattle kings were almost as numerous and opulent as the famous "bonanza kings." They had a personal supervision over their range and stock, and as the circle of their dominion broadened the "round up" and the line riders found here and there fields of all the game animals which in former times swarmed over the country. Indian tradition told them that away back in the forties a certain winter had left no living creature for spring to make glad with her balmy air and green grass. So the idea was born to them that it would be well to take in partners while the business was yet in its glory. So friends in the east were written to concerning the profits and small costs of cattle raising. Individuals purchased half, third or fourth interests in the ranges or herds, as the case might be, and then came about the formation of syndicates and companies. For several years the increase was simply immense, and the trail from Texas became one continuous stream of animal life, emptying itself upon the plains of Wyoming, Montana and Dakota.

The profits were large. Each successive "beef round up" brought to the eastern market thousands of head of cattle, comparing favorably with the "pampered corn fed" stock of Nebraska and Illinois. Newspaper writers set forth the business in the most glowing colors; magazines gave facts and figures with elaborate care; money flowed in from the great commercial centers; new companies were formed every day, and the festive cowboy grew apace and flourished his six shooter with impunity, while his employers sat by their warm fires in ease. Did not the cowboys look after their interests on the stormy range? So they must not be curbed, even if they did sometimes make things lively in these little western towns. In those days the owners of small herds had no rights these reckless fellows were bound to respect. A regularly recorded brand was the only thing that insured anything like safety to the flocks. Indeed, it was no unusual thing to see during the spring round up a half dozen men, mounted on broncbos, ride up to a farmer's gate, open it and gallop pell mell across the pasture and "round up" his whole herd of tame cows. If there was any doubt in their minds about the brand on a creature the lassoes were taken from their places on the saddle, there were a few dextrous flings of the rope in the air and then the animal was stretched upon the ground. May be it was the children's pet heifer, but for fear of hurting her the hot iron in the timid hand had pressed too lightly, and and there was no mark on the hide. So she was a "maverick," and regardless of threats and persuasions, she was driven away to starve to death the next winter on a bare range.

But the day of retribution was coming. The spring of 1886 opened up clear and bright, with but little rain to call forth the grass from the whole earth. During the whole summer there was a terrible drought, and the hot winds swept over the parched plains, shriveling up and killing all sorts of vegetation. The grass was as dry and brown in June as if the frosts of autumn had already come and locked up a goodly supply of nourishment in the dead looking blades for hungry cattle during the long winter months. But the old frontier men knew that there were too many cattle on the range, and that, even if the grass was good enough to keep them during the summer and fall, a great many must die in the cold storms of winter. In September and October there was a larger drive from the south than ever before. Cold weather set in early in November, and continued until 500,000 cattle had perished from starvation. In every little gulch might have been seen cattle staggering from weakness as they vainly tried to nibble the short grass to prolong their tortured existence a few hours longer. But at last they lay down in the snow, and soon the stupor came on which took their value from the cattlemen's pockets.

Now, however, the order of things has changed, and it is the man of small herds who has the advantage. It is acknowledged by men who ought to know that in the future the only way to raise cattle successfully will be to feed and shelter them well in winter, and either close herd or pasture them during the warm seasons. The ranges are fast becoming settled by industrious men, and the land which a few years since formed part of valuable ranges now produces good crops of wheat, oats and corn.

In regard to this, a cattle man well known throughout the west said to your correspondent a few days since: "The day of the 'round up' is practically over; from this time on we will either have to watch our cattle or lose 'em."

Another prominent member of the stock association said: "Yes, it will not be many years before large herds will be a thing of the past. One or two years will put an end to the round up, and the business will be in the hands of local men."

On being told that your correspondent had questioned one man about the loss last winter, he laughed and voluntarily said: "Well, I don't know that I blame any one interested in the matter for not wanting to talk about it, but there is no use in trying to keep it secret any longer. Seventy-five per cent. of all the cattle is somewhere near it, though 80 may be nearer. One firm made a drive of 20,000 in the fall, and in the spring found a scarce 1,500; another of 5,000 numbered but 500 after the 'round up.' The greatest loss was in cows that had been, or were, sucking calves. The calf 'round up' was very small, because the cows were nearly all dead. No, it wouldn't do any good to provide a little shelter for them. If a creature once gets into an old shack during a storm it will stay there until the elements are at peace or it starves to death. Anyway, cattle are strange animals. Where a horse will paw away two feet of snow, and when chilly, take a little run by way of exercise, a cow will get discouraged and stay in the place without food or water until she dies.—Sun Dance (Wy. T.) Cor. Chicago Times.

A Norwich (Conn.) minister announced from the pulpit on a Sunday that he would give $1.50 if the young men in the gallery would take seats down stairs. They did so and the money was paid.

How He Got Even.

A young man failed to receive an invitation to a surprise party to which many that he knew were specially invited. He brooded over it awhile and then stole a march on all the others by inviting the young lady in whose honor the party was to go with him to the theatre. Not knowing of any other arrangement she gladly accepted, and after the performance he suggested a lunch, thereby making the other party, kept waiting for her return, literally one of surprise.—Boston Times.

You Can't Most Always Tell

Sweet maid, what anxious thoughts to-night
Keep you lingering here on the stair?
Are you thinking of eyes that with love's deep light
Pleaded with yours a share?

Ah, no! A far more important thing
Troubled the throbbing brain,
As up the winding stairs she swept,
Daintily holding her train.

She was wondering if, at the coming ball,
With a little artistic taste,
She could make that look like another dress,
By wearing a different waist.

—Life.

Feathers in Flat Cars.

"I heard a good story the other day pertaining to one of the best known railroad men in the northwest. It seems when he first started out in the business he was made station agent, operator, etc., at a point a few miles distant from Cincinnati. He was young, verdant and exceedingly fresh for a youth of his immature years. It was also the general opinion that his knowledge of the science of railroading was somewhat limited. So one balmy spring afternoon it was determined to make the test. Accordingly one of the heaviest shippers of the town walked into the office and solemnly inquired the tariff on loose feathers shipped on flat cars.

A careful perusal of the tariff sheets was made in vain; but being anxious to oblige the shipper he promptly wired to the general freight agent of the road asking the rate. And it was not until the emphatic, not to say profane, answer of the general freight agent was received that the absurdity of the thing dawned upon his mind. But it taught him a lesson that he has never forgotten to this day.—Minneapolis Tribune.

An Afflicted Man.

"You look hard today, Bingley."

"I feel hard. Didn't get a wink of sleep all night."

"How was that?"

"Had the toothache."

"I was awake all night too. A fellow in the next room was playing a jewsharp."

"Great Scott! I imagined that I suffered."—Nebraska State Journal.

For a Game Dinner.

Young Housekeeper—Have you canvas back duck?

Butcher—No, but I have some nice geese.

Young Housekeeper—Very well, you may send a nice canvas back goose.—Life.

The Letter That Never Came.

A letter with the following address has just been sent to the dead letter office:

Sylvester Brown, a web faced scrub
To whom this letter wants to go,
Is chopping wood for his grub
In Silver City, Idaho.

—New York Tribune.

No Time to Lose.

Convalescent (to physician)—I see your bill, doctor, calls for ten dollars. How much do you charge a visit?

Physician—Two dollars.

Convalescent—But you only called three times.

Physician—Five times, my friend, three times for treatment and twice for my money.

Convalescent—I guess I had better hurry and pay up.—Epoch.

Theory and Practice.

Foreman—What was that disturbance on the stairway a minute ago?

Editor—Oh, that old bore of a Quinby called on me and I kicked him out.

"Good scheme. Now you'll have to write a column of stuff for me.

"Here's an article you can use. It is headed 'Politeness Pays.'"—Nebraska State Journal.

The Reason He Is Rich.

"I see that the proprietor of a hotel in Washington is worth $13,000,000," said a banker to a friend.

"Well, that's not to be wondered at."

"Why so?"

"Because he used to be a porter in the house he now owns."—Hotel Mail.

In Mourning.

Mother—I am surprised, dear, to see you at the piano so soon after the death of your dear Uncle James, and "White Wings," too!

Daughter—Yes, mamma, but I'm only playing on the black keys.—New York Sun.

Patience Exhausted.

Collector—This is the last time I shall call for the amount of this bill.

Delinquent—Yes?

Collector—Yes. The next time I shall stand out in the street and yell for it.—Life.

NEVADA ROAD AGENTS.

A Story of the Early Days of Staging.

SHIPPING BULLION IN MOLASSES.

A Millionaire's Son Traced by a Wheel Mark on an Overcoat.

"Stage robbing was almost a legitimate business in early days," said an old Comstocker.

"The express company lost a great deal of money in that way, and at last James Gannon was sent up to Virginia to break up the business. He was a shrewd man, and he devised more schemes for outwitting the road agents than you ever heard of. He sent treasure in sacks of potatoes, which were loaded on prairie schooners, and even the drivers never suspected that they were carrying anything more valuable than potatoes. I have known him to drop a bar of bullion into a cask of molasses and send it through safely, when he knew the agents were watching for it. It was Gannon who thought of sending shotgun messengers on the stages, and he made them carry their guns with the muzzles resting on their toes, so that they didn't dare to fall asleep. He broke up stage robbing as a branch of the general merchandise business by making it too risky.

"While I was keeping a saloon in Virginia City, Clem Lee and three other fellows, whose names have slipped my memory, came into the camp and started a big faro game close to my place. They had $20,000 in the drawer, and I think they had got hold of the coin by holding up a stage. They did a big business and were making plenty of money.

"It was the custom then to close up the games at 12 o'clock on Sunday night. Clem and one of his partners came to me and asked me to mix them up two bottles of cocktails. He wanted them in champagne bottles and had the labels scratched off. I wondered what all that meant, and I found out later. I also noticed that Clem Lee had borrowed a light overcoat from Charlie Dexter.

"As soon as their place was closed, Clem and his partner mounted their horses on B street and rode out of town. Clem was riding a horse that he hired from the chief of police. All the animals were good, and as soon as they were out of town they had a chance to show their speed. The four horsemen spurred down the Geiger grade in the darkness at a terrific rate. If you have been over that road, you know what a gallop down the grade on a dark night means. It is a steep and winding road through the mountains. The turns are sharp and, where it runs through Dead Man's Gulch, a slip over the edge would send horse and rider to kingdom come in no time.

"The four gamblers flew over that road to Washoe faster than anybody ever went before, and made the thirty-four miles in less time than I would dare to tell. At Washoe they had four good horses staked out, and it did not take them long to shift saddles, try my cocktails, mount and start off again. They knew what they were after, and they did not miscalculate time or distance.

"In those days the stage companies had good stock, and when the Reno stage came along six horses were making it spin. Four men sprang into the road, and one of them shouted to the driver to stop. The driver could not pull up short, and the men had barely time to spring aside and avoid the wheels. Clem Lee leveled his revolver and fired, and one of the leaders fell dead. The other horses tumbled over the one that was down, and the stage was stopped, but not before a deputy sheriff on the box had pulled a gun and sent a ball through Clem's partner, Dick.

"The passengers were ordered out and ranged in line, the driver threw down the box, and while the plunder was being gathered up one of the robbers said to the disarmed deputy sheriff: 'I think we ought to kill you, my friend.' Clem Lee interfered and said: 'No; there's been enough bloodshed. Let him alone.' The stage was put to rights, everybody got aboard, and it was driven away, covered while in sight by the robbers' guns.

"The three gamblers buried their dead pal, but where they dug his grave nobody knows. Then they mounted their horses, rode at desperate speed back to Washoe, changed horses there and pushed on up the Geiger grade to Virginia City, where they arrived at 9 o'clock in the morning and immediately went to bed. They felt pretty safe, as nobody would suspect them of having made such a trip in so short a time. They could not have made it without a relay of horses, and even then they had to ride like devils.

"But there was one little circumstance that was insignificant in appearance and fatal in fact. When Clem Lee sprang aside to avoid the stage he raised his right arm and covered the driver with his pistol. The forward wheel of the coach grazed the under side of his arm and ground into the sleeve a streak of mud that nothing could wipe out. A lady in the coach was looking out of the window, and as the coach passed Lee she saw the mark made by the wheel on his coat sleeve.

"When she reached Virginia City, and, with the other passengers, was questioned by Gannon, she said: 'Look for a man with a wheel mark on the sleeve of his light overcoat. That mark was made by a rapidly turning wheel, and no brush ever was made that will take it out.'

"Gannon strolled up C street, and Charlie Dexter came along with his light overcoat on. Gannon glanced at his sleeve, saw the wheel mark and gathered him in. Of course, it didn't take Dexter long to remember who had his coat on the night of the robbery, and the three gamblers were captured and sent to prison. One of them (I shan't say which) was the son of a famous philanthropic millionaire of Washington."—New York Star.

Women and Their Dogs in Paris.

Women here, as in London, have an insatiable mania for carrying or leading by chain pug dogs of all degrees of ugliness. One afternoon, during a shower of rain, one was seen walking along the Quai Jemmapes, where a number of workmen had just finished discharging a cargo of coal from a barge. The lady held in one hand an umbrella, with which she carefully protected from the least drop of wet an ugly little dog with a gorgeous blue ribbon round its neck. By her side trotted her daughter, a little girl about 3 years old, her shoes not so waterproof as they might have been, who, deprived of the protection of the umbrella monopolized by the dog, was rapidly getting drenched.

As she was about to cross the bridge which spans the canal one of the coal heavers went up to her and said, "Allow me, madam, to relieve you of your dog, so that you may carry your girl to the other side." The woman accepted the offer, but when the party arrived at the other end of the bridge the coal heaver threw the pug into the canal, telling its mistress at the same time, "That's a lesson to you not to shelter a dog while your child is getting wet."

The woman screamed and soon a crowd collected, to whom she pathetically narrated the assassination of her pet. Two policemen at her instigation took the coal heaver to the station, but the superintendent declined to formulate any charge against him. All she could do, he told her, was to bring a civil action for the value of her dog. She left the station "apparently much dissatisfied with the decision."—Paris Cor. London Telegraph.

All Watches Compasses.

A few days ago I was standing by an American gentleman when I expressed a wish to know which point was the north. He at once pulled out his watch, looked at it, and pointed to the north. I asked him whether he had a compass attached to his watch. "All watches," he replied, "are compasses." Then he explained to me how this was. Point the hour hand to the sun, and the south is exactly half way between the hour and the figure 12 on the watch. For instance, suppose that it is 4 o'clock. Point the hand indicating 4 to the sun and 2 on the watch is exactly south.

Suppose that it is 8 o'clock. Point the hand indicating 8 to the sun and the figure 10 on the watch is due south. My American friend was quite surprised that I did not know this. Thinking that very possibly I was ignorant of a thing that every one else knew, and happening to meet Mr. Stanley, I asked that eminent traveler whether he was aware of this simple mode of discovering the points of the compass. He said that he had never heard of it. I presume, therefore, that the world is in the same state of ignorance. Amalfi is proud of having been the home of the inventor of the compass. I do not know what town boasts of my American friend as a citizen.—London Truth.

A Farmer on a Bicycle.

The New England farmer of today is much given to the covered carriage and horse that holds his head high. I suspect that the reliable but somewhat deliberate ox satisfied his ancestors. I met one farmer near Holyoke driving his cow home from the pasture on a bicycle—that is, the man was on a bicycle and the cow was ahead of him on foot, though she looked as if she would appreciate a bicycle, too, as he was speeding her along on a rather lively trot. I stopped him and asked him if there was any show for a farmer to make money in that section, and while the patient cow leaned against a tree and caught her breath he replied that there was none whatever.

His grandfather had made money on the farm, he said, but he could not. Then he called to the cow to "hump herself," and went spinning down the road with the long suffering beast making desperate efforts to keep from being run over. It occurred to me that perhaps his grandfather did not pick the stones off the farm with a bicycle and a pair of tongs.—Cor. New York Tribune.

Impure Ice.

The Massachusetts board of health has examined 76 samples of water and 336 samples of ice from 58 localities, with the result of showing that, contrary to general belief, ice may be nearly as impure as the water from which it forms. The crystallization of the water forces out the color, salt, and most of the matter in solution, and clear ice from polluted sources may be comparatively free from impurities and the probability of hiding disease germs.

But in snow ice and ice formed by flooding the impurities become entangled, so that freezing gives no purification. The public is warned by the board, therefore, that ice is unsafe for domestic purposes when obtained from a source polluted by sewage beyond that which would be allowable in drinking water, and that in general it is much safer to use for drinking water and for placing in contact with food that portion of the ice that is clear.—Arkansaw Traveler.

A Historic Cradle.

The Emperor William, his brothers and sisters, his children and all his Hohenzollern ancestors born since 1722 have been successively rocked in the family cradle of that illustrious house or enthroned thereon during the court procession which adds splendor to each royal christening. The ancient couch is a clumsy structure of old oak, richly carved, round whose four sides is cut in large Roman characters the text, "He hath given his angels charge over thee, that they keep thee in all thy ways."—Harper's Bazar.

ASHES OF THE DEAD.

Preserving the Remains of the Departed.

CREMATION STEADILY GROWING IN FAVOR.

Something About the Urns Used by the Ancients.

Urns for the ashes of the dead are more in demand now than ever before in modern times. Their manufacture has become an important industry in the potteries of East Liverpool, O., about forty miles west of this city. As cremation grows in popularity the necessity for these vases increases. At first some difficulty was experienced in keeping the ashes of the human body free from foreign materials. Even in ancient periods that was a problem. The Greeks used a shroud of asbestos, the Egyptians one of amianth and even the scientific Mr. Eassie suggested a zinc coffin, that metal being volatile. But earthen urns were most generally used. Yet great care was taken to protect these urns from the ravages of weather and intruders. The Romans had a chamber partitioned off purposely for sepulchral uses. It was known as the columbarium, and was surrounded by small holes or niches, in which the urns were deposited. The columbarium resembled the dove cote of today. Tombs of this description were chiefly owned by the wealthy families for depositing the ashes of their slaves and dependents. Several of them are still to be seen at Rome. One, discovered in recent years, contained two urns in every niche, with the names of the persons whose ashes were there inscribed over them.

ANCIENT AND MODERN URNS.

And so in the United States today urns of earthenware are exclusively used after incinerations. The potters of East Liverpool have a separate line of apparatus for their manufacture, and put into the vessels the very best kind of materials, so that they may be preserved an indefinite length of time. Care is taken to have the fastenings for the covering perfectly air tight. Two designs of urns are made for the trade. One is wholly plain, the other is ornamented with flourish lines, the representation of ivy leaves, or, in a few instances, with scriptural figures. These varieties are intended to suit the different intentions of keeping the urn in the houses of the living, inclosing it in the vaults in the cemeteries, or interring it in ordinary graves. All three methods of final disposition are pursued in this country. One very rich and influential family, formerly residents of this city, keep the urn containing the ashes of the father wrapped in an American flag and sitting upon the top of his old secretary in the library. The ashes of others who have been cremated in Pittsburg have been simply buried in the graveyards or placed in mausoleums. There used to be a custom among the Digger Indians of scattering the ashes to the winds, or to smear them with gum upon the heads of the mourners. But among civilized people the urn is the symbol of refinement, even in a doctrine that is questionable to many.

THE COST OF INCINERATION.

These potteries of East Liverpool are but a short distance across the country from the first crematory ever erected in the United States. That is at Washington, Pa., only thirty miles from St. Pittsburg. It was put up by Dr. Julius Le Moyne not more than twelve years ago. For two years afterward the incinerations which were conducted there attracted widespread attention on the subjects being brought from prominent families all over the country. So rapidly has cremation progressed in favor of Americans since then that today there are furnaces in operation at Lancaster, Pa., Buffalo, N. Y., and Pittsburg, Pa. One society, which has also erected a crematory at Fresh Pond, L. I., has about 300 members. Similar societies exist in nearly all the large cities, and so common have incinerations become that half of them are never heard of. The use of natural gas in burning the body at the furnace in Pittsburg has so largely reduced the cost of an incineration and the attendant ceremonies that expense is, now no hindrance to the method, at least in this city. In other places, where they have not got the wonderful fuel we have, the cost, although higher, does not exceed $7 for the incineration and $45 for the whole service. It is said, however, that in Japan the natives have reduced the cost to $1.

EGYPTIAN VASES.

As intimated above, the most prevalent material in all ages for vases for the ashes of the dead has generally been baked clay. Multitudes of Greek sepulchral urns have, after a lapse of more than fifteen centuries, been brought to light at a time when learned men can appreciate them and gather from them valuable information in history and archæology. Egyptians made these earthen vases at such early times that they are contemporary with the pyramids themselves. But the most remarkable Egyptian pottery for burial purposes was the so called porcelain, made of fine sand, or frit, loosely fused together, and covered with a thick silicious glaze of blue, green, white, purple or yellow color. Objects were not only made out of this material for the dead, but for the toilet of the living, too. But for the first object they were used most. They were exported from Egypt to the neighboring countries, and are found alike in the tombs of the Greek isles, the sepulchers of Etruria and the graves of Greece. Most of the figures of deities, the sepulchral ones deposited with the dead, and a few vases for household purposes were made of this porcelain. It was at a later period that figures of deities were modeled in terra cotta. The objects most remarkable in this material for size are the large coffins found at Warka (supposed by some to be the Ur of the Chaldees), with oval covers, and ornaments of the Sassanian period.—Pittsburg Cor. St. Louis Globe-Democrat.

The invention of an instrument to which the name barothermotelemeter has been given is announced. Its purpose is to enable observers to take readings as often as desired, and by a single wire, from barometers and thermometers placed at great heights or distances without the necessity of the observer being resident where the instruments are placed, thereby saving much expense and enabling observations to be taken at points where residence might be impossible.—New York Commercial Advertiser.

INYO INDEPENDENT.

INDEPENDENCE, CAL.

FRIDAY APRIL 3 1891

The "Record Union" says that Eastern visitors were carefully kept swap from the Capitol during the closing days of the Legislature, and that on the last night of the session the House was transformed into a dance house of the lowest order, and the Senate resembled a concert dive. These scenes can have but one result, and that is to bring free institutions into discredit and generate contempt for the laws enacted in such a Legislature. There is merit everywhere and always in manly self-control and decency and dignity, but this merit seems not to have been amongst the few gifts and graces of the late Legislature.

We have from the first regarded as very important and dangerous the new law under which the President of the United States, or rather his Secretary of the Treasury, is authorized to refuse to issue to anybody gold bullion for exportation to foreign countries. As few other papers we have seen appear to look upon that law in the same light, we have entertained the hope that our fears were groundless. One of these few is the Alexandria "Gazette", which says,

"The refusal of the Government, not only to supply importers with gold bars with which to pay for foreign goods, but also to redeem silver certificates with gold coin, naturally suggests the idea that it is not as assured of the maintenance of its gold fund as it desires to be, and just as naturally induces a tendency to gold-hoarding on the part of the people."

The same paper lays the blame of such legislation upon the Republican party.

But will silver be able to maintain its present status under such circumstances? We constantly opposed during the last session of Congress any measure that would discredit silver—for example, a law providing for coinage any less than all the silver that might be brought into the mints. Nothing less than free coinage—nothing else than free coinage—can make silver the equal of gold. How would such a law—that is, a law providing for the coining of so many millions of dollars per month—have enabled silver to weather the storm which is now beating against the metal? How could anything except disaster result from the Government's refusal to issue gold bullion for exportation? This measure is supposed to have been resorted to in the interest of silver, but if so, it was resorted to under a misapprehension of the condition of things that would follow its enactment into a law. It is a kindred measure to the one which authorizes the partial coinage of silver.

We await with interest the result of the Secretary's gold policy. Possibly it may not be so objectionable as we have supposed it to be.—Richmond, Va. Dispatch

THE NEW BALLOT LAW

AN ACT TO AMEND SECTIONS 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1192, 1193, 1194, 1195, 1196, 1197, 1198, 1199, 1200, 1201, 1202, 1203, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1257, 1258, AND 1259 OF THE POLITICAL CODE, AND TO ADD FOUR NEW SECTIONS THERETO, TO BE NUMBERED 1213, 1214, 1215, and 1216, ALL IN RELATION TO THE CONDUCT OF ELECTIONS IN THIS STATE.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. Section 1185 of the Political Code is hereby amended to read as follows:

SEC. 1185. All ballots cast in elections for public officers within this State shall be printed and distributed at public expense as hereinafter provided. The printing of general tickets and cards of instruction to electors of each county, and the delivery of the same to the election officers, shall be a county charge, the payment of which shall be provided for in the same manner as the payment of other county expenses; and the printing and delivering of "municipal tickets," and also in case of separate elections for city, city and county, or town officers, the printing and delivering of cards of instruction shall be a charge upon the respective city, city and county or town in which such "municipal tickets" and cards of instruction are to be used, the payment of which shall be provided for in the same manner as the payment of other city, city and county or town expenses.

SEC. 2. Section 1186 of the Political Code is hereby amended to read as follows:

SEC. 1186. Any convention, as hereinafter defined, held for the purpose of making nominations for public office, and also electors, to the number hereinafter specified, may nominate candidates for public offices to be filled by election within the State. A convention, within the meaning of this act, is an organized assemblage of delegates representing a political party which, at the last election before the holding of such convention, polled at least 3 per cent. of the entire vote of the State, county, district or other political division for which the nomination is made; provided, that in any county, township, city or district wherein no general election shall have been held after its organization, a convention of any party polling at least 3 per cent. of the votes cast in the precincts composing such county, township, city or district shall have the same power, and its nominations the same effect as though such county, township, city or district had been organized before the next preceding general election.

SEC. 3. Section 1187 of the Political Code is hereby amended to read as follows:

SEC. 1187. All nominations made by any such convention shall be certified as follows: The certificate of nomination, which must be in writing, shall contain the name of each person nominated, his residence and the office for which he is nominated, and shall designate the party or principle which such convention represents. It shall be signed by the chairman and secretary of such convention, who shall add to their signatures their respective places of residence, and make oath before an officer authorized to administer the same, that the matter stated in such certificate is true to the best of their knowledge and belief, and a certificate of the oath shall be annexed to the certificate of nomination.

SEC. 4. Section 1188 of the Political Code is hereby amended to read as follows:

SEC. 1188. A candidate for public office may be nominated otherwise than by a convention in the manner following: A certificate of nomination containing the name of the candidate to be nominated, with the other information required to be given in the certificates provided for in Section 1187 of this code, shall be signed by electors residing within the district or political division for which candidates are to be presented, equal in number to at least 3 per cent. of the entire vote cast at the last preceding election in the state, district or political division for which the nomination is to be made; provided, that 1,000 signatures shall be sufficient for the nomination of a candidate for any office in the State. Said signatures need not all be appended to one paper, but each signer shall add to his signature his place of residence, giving the street and number, when he resides in a city. One of the signers of each such certificate shall swear that the statements therein made are true to the best of his knowledge and belief, and a certificate of such oath shall be annexed. Such a certificate, when made as above prescribed, shall have the same effect as a certificate of nomination made by a party convention.

SEC. 5. Section 1189 of the Political Code is hereby amended to read as follows:

SEC. 1189. Certificates of nomination shall be filed with the Secretary of State for the nomination of candidates for offices to be filled by the electors of the entire State, or for members of the State Board of Equalization, State Board of Railroad Commissioners, or House of Representatives. Certificates of nomination shall be filed with the Clerk or Secretary of the legislative body of any incorporated city or town for the nomination of any candidate for an office under the government of any city or town, to be filled by the electors of such city or town. For all other nominations to public offices, certificates of nomination shall be filed with the Clerks of the respective counties wherein the offices are to be filled by the electors; and where the district or political division embraces more than one county, such certificate must be filed with the Clerk of the county in which the candidate resides, and the name of each such candidate as specified in the certificate of nomination shall be certified by said County Clerk to the County Clerks of the other counties within the district or political division, not less than fifteen days before the day of election.

SEC. 6. Section 1190 of the Political Code is hereby amended to read as follows:

SEC. 1190. No certificate of nomination shall contain the name of more than one candidate for each office to be filled. No person shall join in nominating, under the provisions of this code, more than one nominee for each office to be filled, and no person who has voted in a convention for or against a candidate for any office shall join in nominating, in any manner, any other nominee for that office, and no person shall accept a nomination to more than one office.

SEC. 7. Section 1191 of the Political Code is hereby amended to read as follows:

SEC. 1191. The Secretary of State shall preserve in his office for the period of two years all certificates of nomination filed therein under the provisions of this code, and each County Clerk shall preserve in his office for a like period all certificates of nomination filed therein under the provisions of this code.

SEC. 8. Section 1192 of the Political Code is hereby amended to read as follows:

SEC. 1192. Certificate of nomination required to be filed with the Secretary of State shall be filed not more than sixty days and not less than forty days before the day fixed by law for the election of the persons in nomination when the nomination is made by convention, and not more than sixty days and not less than thirty days before the day of election when the nomination is made by electors as provided in Section 1188 of this code. Certificates of nomination required to be filed with the County Clerks, or with the Clerk or Secretary of the legislative body of any city or town, shall be filed not more than fifty nor not less than thirty days before the day of election, when the nomination is made by a convention, and not more than fifty days nor less than twenty days before the day of election when the nomination is made by electors. Should a vacancy in the list of nominees of a convention occur, such vacancy may be filled by the convention, or if it has delegated to a committee the power to fill vacancies, such committee may, upon the occuring of such vacancy, proceed to fill the same; provided, that no nomination shall be made or certified at a period before the day of election less than the minimum number of days provided for filing certificates of nomination made under this code. The chairman and secretary of the convention, or of such committee, shall thereupon make and file with the proper officer a certificate setting forth the cause of the vacancy, the name of the person nominated, the office for which he was nominated, the name of the person for whom the new nominee is to be substituted, the fact that the committee was authorized to fill vacancies, and such further information as is required to be given in an original certificate of nomination. When a certificate to fill any vacancy shall be filed with the Secretary of State, he shall in certifying the nomination to the various County Clerks, insert the name of the person who has been thus nominated to fill a vacancy in the place of that of the original nominee. Any person whose name has been presented as a candidate, may, at least five days before the making of the publication of the nominations prescribed in this section, cause his name to be withdrawn from nomination by filing with the Secretary of State and County Clerk his request therefor in writing, signed by him and acknowledged before the County Clerk of the county in which he resides, and no name so withdrawn shall be printed on the ballot.

SEC. 9. Section 1193 of the Political Code is hereby amended to read as follows:

SEC. 1193. Not less than twenty-five days before an election to fill any public office, the Secretary of State shall certify to the County Clerk of each county within which any of the electors may by law vote for candidates for such office, the names of each person nominated for such office, as specified in the certificate of nomination filed with the Secretary of State.

SEC. 10. Section 1194 of the Political Code is hereby amended to read as follows:

SEC. 1194. At least ten days before an election to fill any public office, the County Clerk of each county shall cause to be published, in at least two newspapers of general circulation within the county, the nominations to office certified to him by the Secretary of State, and also all those filed with the County Clerk. He shall make not less than two such publications in each of such newspapers before election day, one of such publications being made upon the last day upon which such newspaper is issued before the day of election. The list of nominations published by the County Clerks of the respective counties shall be arranged in the order and form in which they will be printed upon the ballot. The Clerk or the Secretary of the legislative body of any incorporated city or town with whom the names of any candidates have been filed shall publish in the same manner the list of nominations filed with him; but where only one newspaper is printed in any county, city or town, then publication in such newspaper shall be deemed sufficient, and where no newspaper is printed in such county, city or town, publication shall be made through any newspaper designated by the Board of Supervisors of said county, or the legislative body of such city or town, and by posting copies of the ballot in three of the most public places in such county, city or town not less than ten days before the day of election.

SEC. 11. Section 1195 of the Political Code is hereby amended to read as follows:

SEC. 1195. Whenever a proposed constitutional amendment, or other question, is to be submitted to the people of the State for the popular vote, the Secretary of State shall duly, and not less than twenty-five days before election, certify the same to the Clerk of each county of the state; and the Clerk of each county shall include the same in publication provided for in Section 1194 of this code.

SEC. 12. Section 1196 of the Political Code is hereby amended to read as follows:

SEC. 1196. Except as in this code otherwise provided, it shall be the duty of the County Clerk of each county to provide printed ballots for every election of public officers, except elections for city or town officers, in which electors or any of the electors within the county participate, and to cause to be printed in the appropriate ballot the name of every candidate whose name has been certified to, or filed with the County Clerk, in the manner provided for in this code. Ballots other than those printed by the respective County Clerks, or the Clerk or Secretary of the legislative body of any incorporated city or town, according to the provisions of this code, shall not be cast nor counted at any election. It shall be the duty of the County Clerk of any consolidated city and county to provide separate ballots for every election for city and county officers in which the electors or any of the electors of such city or county participate, and to cause to be printed in such separate ballots the name of every candidate for a city and county office, whose name has been filed with the said County Clerk in the manner provided in this code. It shall be the duty of the Clerk or Secretary of the legislative body of any incorporated city or town to provide separate ballots for every election for city or town officers in which the electors, or any of the electors, of such city or town participate, and to cause to be printed in such separate ballots the name of every candidate whose name has been filed with such Clerk or Secretary in the manner provided for in this code. All ballots shall be of the necessary size and shape to contain the names of all the candidates, together with the necessary blank spaces hereinafter provided for, and shall be printed on tinted paper furnished by the Secretary of State. It shall be the duty of the Secretary of State to obtain and keep on hand a sufficient supply of paper for the ballots, and to furnish the same in quantities ordered to any County Clerk, or Clerk or Secretary of the legislative body of any incorporated city or town upon payment by them of the cost of such paper. Such paper shall be water marked with a design to be furnished by the Secretary of State, in such manner that the said water mark shall be plainly discernible on the outside of such ballot when folded according to law. Such design shall be kept secret from all persons not engaged in the preparation, printing or distribution of the paper or ballots until the day of election. Such design shall be changed for each general election, and the same design shall not be used again at any general election within the succeeding 14 years, but at any special or separate local election, paper marked with the design used at the previous election may be used. Nothing in this code contained shall prevent any voter from writing upon his ballot the name of any person for whom he desires to vote for any office, and such vote shall be counted the same as if printed upon the ballot and marked as voted for.

SEC. 13. Section 1197 of the Political Code is hereby amended to read as follows:

SEC. 1197. All ballots printed by County Clerks, other than the separate ballots containing the names of candidates for city and county offices, printed by the County Clerks of consolidated cities and counties shall be headed "General Ticket"; and all ballots printed by County Clerks of consolidated cities and counties, containing the names of candidates for city and county offices, and also all tickets printed by the Clerk or Secretary of the legislative body of any incorporated city or town, shall be headed "Municipal Ticket." Under the heading of all general tickets, the respective number of the Congressional, Senatorial and Assembly district in which such ticket is to be voted shall be printed, together with the following direction to voters: "To vote for a person [stamp], a cross (X) in the square at the right of the name." Opposite the name of each office shall be printed a direction to the voter specifying the number of persons to be voted for for that office, and opposite each constitutional amendment or other question to be voted upon in separate lines the words "yes" and "no." All municipal tickets containing the names of candidates for ward or district offices, in addition to such direction to voters, shall have the number of the ward or district in which such ticket is to be voted printed thereon. All municipal tickets shall be of a color or tint different from that of the general ticket. On each ballot a perforated line shall extend from top to bottom, one-half inch from the right-hand side of such ballot, and upon the half-inch strip thus formed there shall be no printing except the number of the ballot, which shall be upon the back of such strip in such position that it shall appear on the outside when the ballot is folded. The number on each ballot shall be the same as that on the corresponding stub, and the ballots and stubs shall be numbered consecutively in each county. All ballots shall be 18 inches in length and 9½ in width, and as many times such width as shall be necessary to contain the names of all candidates nominated. Where the names of candidates are printed in separate columns such columns shall be separated by heavy rules; and on all ballots the names of candidates shall each be separated by a rule extending to the extreme right of the column. A clear space of one inch in plain Roman type, and shall contain the name of every candidate whose nomination for any office specified in the ballot has been certified to and filed according to the provisions of this code, and no other name; [and there shall be added to all the names of candidates their party or political organizations.] The names of the candidates for each office shall be arranged under the designation of the office, in alphabetical order, according to surname. [Except that the names of candidates for the office of electors for President and Vice-President shall be arranged in groups as presented in the several certificates of nomination, and the voter may vote for the whole of said group by making one mark after such group.] There shall be left at the end of the list of candidates for each office as many blank spaces as there are persons to be elected to such office in which the voter may insert the name of any person not printed upon the ballot for whom he desires to vote as candidate for such office; and the names and blank spaces on the whole ticket shall be consecutively numbered, the figures being placed on the left-hand side of such names and blank spaces. There shall be a margin on the right-hand side of the names, at least one-half of an inch wide, so that the voter may clearly indicate, in the way to be hereafter pointed out, the candidate and candidates for whom he wishes to cast his ballot; the county, city or town in which each candidate resides may be printed in small type on the right-hand side of his name. Whenever any question is to be submitted to the vote of the people, it shall also be printed upon the ballot in such a manner as to enable the electors to vote upon such question in the manner hereinafter provided. At the head of each ballot shall be printed in separate lines the names of all political parties which have filed certificates of nomination of candidates in accordance with Sections 1186 and 1187 of this code, thus: "Regular Republican Ticket", (straight); opposite the names of each party, and on the same line therewith, there shall be a margin similar to that herein required, to be left opposite the name of each candidate, in which the voter may place the mark in the manner specified in Section 1201 of this code, if he desires to vote for all of the candidates of such party, but a ballot so marked shall not be counted if it [be stamped in any other place] except to indicate a vote or votes upon a constitutional amendment or other question.

SEC. 14. Section 1198 of the Political Code is hereby amended to read as follows:

SEC. 1198. All ballots, when printed, shall be bound in stub-books of 100 ballots each. A record of the number of ballots printed by them shall be kept by the respective County Clerks, and by the Clerk or Secretary of the legislative body of each incorporated city or town.

SEC. 15. Section 1199 of the Political Code is hereby amended to read as follows:

SEC. 1199. The County Clerk of each county shall provide for each election precinct in the county not less than one hundred general tickets for every day of election or ballot-box registered in the election precinct; and in case of a consolidated city and county, an equal number of municipal tickets when any city and county officers are to be elected; and the Clerk or Secretary of the legislative body of any incorporated city or town shall furnish a like number of municipal tickets when any city or town officer is to be elected.

SEC. 16. Section 1200 of the Political Code is hereby amended to read as follows:

SEC. 1200. Whenever it shall appear by affidavit that an error or omission has occurred in the publication of the name or description of the candidates nominated for office, or in the printing of the ballots, the Superior Court of the county, or the Judge thereof, shall, upon application by any elector, by order, require the County Clerk to correct such error, or to show cause why such error should not be corrected.

SEC. 17. Section 1201 of the Political Code is hereby amended to read as follows:

SEC. 1201. Before the opening of the polls at any election within any county, the County Clerk of the county shall cause to be delivered to the Boards of Election of each election precinct which is within the county, and in which the election is to be held, at the polling-place of the election precinct, the proper number of general tickets to be used in the election precinct, in sealed packages, with marks on the outside, clearly designating the precinct or polling-place for which they are intended, and the number of ballots inclosed, and in case of a consolidated city and county, also a like number of municipal tickets; and the Clerk or Secretary of any incorporated city or town shall in like manner cause to be delivered the proper number of municipal tickets. The County Clerk, Clerk or Secretary shall prepare a receipt for each polling-place, enumerating the packages and stating the time and day and date when the same were delivered by him to the Inspectors of Election. The Inspectors of Election shall sign said receipt upon receipt of the packages, which shall forthwith be returned and filed. The County Clerk, Clerk and Secretary respectively shall have authority to employ such messengers as may be necessary to insure the safe and expeditious delivery of the ballots to the Inspectors or Judges of Election, as provided in this code, and the Board of Supervisors, or other board or body having the control of elections, shall allow such messengers a reasonable compensation for their services, to be paid as other election expenses are paid. In case of the prevention of an election in any precinct by the loss or the destruction of the ballots intended for that precinct, the Inspector or other election officer for that precinct shall make an affidavit setting forth the fact, swear to the same before an officer authorized to administer oaths, and transmit it to the Governor of this State. Upon receipt of such affidavit the Governor may order a new election in such precinct, and upon the application of any candidate for any office to be voted for by the electors of such precinct the Governor shall order a new election in such precinct.

SEC. 18. Section 1202 of the Political Code is hereby amended to read as follows:

SEC. 1202. At the same time and in the same manner as Inspectors and Judges of Election are now appointed in this State, two ballot clerks for each election precinct in the State shall be appointed, whose duty it shall be to have charge of the ballots on the day of election, and to furnish them to the voters in the manner hereinafter provided. Such ballot clerks shall possess the same qualifications, and shall be paid the same compensation, as Inspectors of Elections. In making appointments of such ballot clerks, one of them shall be taken from the political party that polled the largest number of votes at the last preceding election and the other from the party that polled the next largest number of votes at such election. They shall act as additional Clerks of Election when the polls are closed, and they shall serve until the votes are counted and the returns are signed; provided, that whenever a general and municipal election shall be held at the same time, there shall be appointed one additional Inspector, one additional Judge, and two additional clerks in the manner now provided by law.

SEC. 19. Section 1203 of the Political Code is hereby amended to read as follows:

SEC. 1203. All offices upon whom is imposed by the law of the State the duty of designating polling places shall cause such polling places to be suitably provided with a ballot-box, to be marked on the outside, "general tickets," and when any city, city and county or town officers are to be elected a second ballot-box, to be marked on the outside "municipal tickets," and shall also provide a sufficient number of places, booths or compartments at or in which voters may conveniently mark their ballots, so that in the marking thereof they may be screened from the observation of others, and a guard rail shall be so constructed and placed that only such persons as are inside said rail can approach within six feet of the ballot-boxes and of such booths or compartments. The arrangements shall be such that the supply of paper for the box-boards or compartments shall be hidden from the view of those just outside the said guard-rail. The number of such voting booths or compartments shall not be less than one for every fifty electors qualified to vote in the precinct. No person other than electors engaged in receiving, preparing or depositing their ballots shall be permitted to be within said rail before the closing of the polls except by authority of the Board of Election, and then only for the purpose of keeping order and enforcing the law. Each of said voting booths or compartments shall be kept provided with proper supplies and conveniences for marking the ballots.

SEC. 20. Section 1204 of the Political Code is hereby amended to read as follows:

SEC. 1204. Any person desiring to vote shall give his name and address to one of the ballot clerks, who shall then, in an audible tone of voice, announce the same, and if the other ballot clerk finds the name on the register, he shall in like manner repeat the name and address, when upon challenge may be interposed, as provided in Section 1206 of this code. If the challenge be overruled, the ballot clerk shall give him a ticket, and the clerk shall write on the register, opposite the name of the voter, the number of the general ticket given him, and also the number of the municipal ticket given him, when any city, city and county or town officer is to be elected; and the voter shall be allowed to enter the place inclosed by the guard-rail, as above provided. The ballot clerk shall then hand out one general ticket, and where any city, city and county or town officers are to be elected, also one municipal ticket; and only one ballot of each kind.

SEC. 21. Section 1205 of the Political Code is hereby amended to read as follows:

SEC. 1205. On receipt of his ballot the elector shall forthwith, and without leaving the inclosed space, retire alone to one of the places, booths or compartments provided to prepare his ballot. He shall prepare his ballot by marking a cross after the name of the person or persons for whom he intends to vote, but, however, that any elector, who desires to who desires to vote for an entire party ticket, may mark a cross as above described against the political designation of such party, and shall then be deemed to have voted for all persons nominated by such party, and in case of a constitutional amendment or other question submitted to the vote of the people, by marking in the appropriate margin, a cross (X) against the answer which he desires to give. Such marking shall be done only with a stamp, which will insure the ready detection of such ballot, and shall be provided by the officers who are by this code required to furnish election supplies, for each booth or compartment provided for the marking and preparation of ballots. Before leaving such booth or compartment the elector shall fold his ballot in such a manner that the number of the ballot shall appear on the outside thereof, without displaying the marks on the face thereof, and shall keep it folded until he has voted. Having folded his ballot the voter shall deliver it folded to the Inspector, who shall announce in an audible tone of voice the name of the voter and the number of his ballot. The Ballot Clerk having the register in charge, if he finds the name to correspond with the number marked opposite the voter's name on the register, shall in like manner repeat the name and number, and shall mark opposite the name the word "voted." The Inspector shall then separate the upper from the ballot, and shall deposit the ballot in the Box. The numbers of all ballots voted shall be immediately destroyed.

SEC. 22. Section 1206 of the Political Code is hereby amended to read as follows:

SEC. 1206. Not more than one person shall be permitted to occupy any one booth at one time, nor no person shall remain in or occupy a booth longer than is required to prepare his ballot, and in no event longer than ten minutes.

SEC. 23. Section 1207 of the Political Code is hereby amended to read as follows:

SEC. 1207. Any voter who shall spoil a ballot shall return such spoiled ballot to the Ballot Clerk and receive another one in its place, one at a time, not to exceed three in all. All the ballots thus returned shall be immediately canceled, and, with those not distributed to the voters, shall be returned with the registered list and ballots, as now provided in Sections 1236 and 1237 of this code. Every elector who does not vote the ballot delivered to him shall, before leaving the polling place, return such ballot to the Ballot Clerks having charge of the ballots, who shall immediately cancel the same and return them in the same manner as spoiled ballots. The Ballot Clerks shall account for the ballots delivered to them by returning a sufficient number of unused ballots to make up, when added to the number of official ballots cast and the number of spoiled ballots returned, the number of ballots given to them, and it shall be the duty of the officers receiving such returned ballots to compel such an accounting.

SEC. 24. Section 1208 of the Political Code is hereby amended to read as follows:

SEC. 1208. Any elector who declares, under oath, to the presiding election officer that he cannot read, and that by reason thereof, or that by reason of physical disability, he is unable to mark his ballot, shall, upon request, receive the assistance of any one of the officers of election that he may choose in the marking thereof, and such officer shall thereafter give no information regarding the same.

SEC. 25. Section 1209 of the Political Code is hereby amended to read as follows:

SEC. 1209. No member of the Board of Election shall deposit in the ballot-box any ballot from which the slip containing the number of the ballot has not been removed by the Inspector.

SEC. 26. Section 1210 of the Political Code is hereby amended to read as follows:

SEC. 1210. The County Clerk of each county, or in case of separate city or town elections, the Clerk or Secretary of the legislative body of such city or town shall cause to be printed on plain white paper, without water-mark or indorsements (except the words "sample ballot") at least as many copies of the form of ballot provided for use in each voting precinct as there shall be registered voters in such precinct. Such copy shall be designated "sample ballots," and shall be furnished to registered voters at the office of such Clerk or Secretary five days before the day fixed by law for such election, and at any time during such five days; provided, that not more than one sample ballot shall be furnished to any one voter. Such Clerk or Secretary shall cause to be printed, in large, clear type, on cards, instructions for the guidance of electors in obtaining and marking their ballots. He shall furnish twelve such cards to the Board of Election in each election precinct in his county, at the same time and in the same manner as the printed ballots and sample ballots. The Board of Election shall post at least one of such cards in each booth or compartment provided for the preparation of ballots, and not less than three of such cards at other places in and about the polling places on the day of election. Sections 1214 and 1215 of this code and Section 61 of the Penal Code shall also be printed on each of said cards.

SEC. 27. Section 1211 of the Political Code is hereby amended to read as follows:

SEC. 1211. In canvassing the votes any ballot which is not made as provided in this act shall be void, and shall not be counted; but each such ballot must be preserved and returned with the other ballots. Any name written upon a ballot shall be counted for the office under which it is written, whether or not a cross is marked after it. If a voter marks more names than there are persons to be elected to an office, or if for any reason it is impossible to determine the voter's choice for any office to be filled, his ballot shall not be counted for such office.

SEC. 28. Section 1212 of the Political Code is hereby amended to read as follows:

SEC. 1212. Any person entitled to vote at a general election held within this State shall, on the day of such election, be entitled to absent himself from any service or employment in which he is then engaged or employed for the period of two consecutive hours, between the time of opening and the time of closing the polls; and such voter shall not, because of so absenting himself, be liable to any penalty, nor shall any deduction be made on account of such absence from his usual salary or wages.

[Amend Section 1257 of the Political Code to read as follows:

After the lists are thus signed, the board must proceed to open the ballots and count and ascertain the number of votes cast for each person voted for. All the ballots must be taken out of the ballot-box, one at a time, and opened by one of the members of the board, and as so taken out, the straight ballots must be placed in separate piles, according to their respective ticket headings, vignettes, or other designations in manner as follows, to wit: All the straight ballots of each such party must be placed in a separate pile, and straight undesignated ballots must be placed in a separate pile in a like manner. When all the straight ballots shall have been so placed in piles, the number of ballots in each such pile must be carefully, correctly and distinctly counted aloud by a member of the board, in presence of the board and of the bystanders, whereupon an official record must be made by each clerk of the total number of ballots in such pile. Immediately thereafter all straight ballots must be by one of the Judges strung upon one string in such a manner that all the straight ballots of each party shall be in direct succession and immediate proximity upon said string, and all such straight ballots thereupon be securely bound together by said string and replaced in the ballot-box.

All the ballots, other than straight ballots, of each separate political or other party must be placed in a pile. When all the ballots shall have been so placed in a pile the number of ballots in such pile must be carefully, correctly and distinctly counted aloud by a member of the board in the presence of the board and of the bystanders, whereupon an official record must be made by each clerk of the total number of ballots in such pile. Immediately thereafter all the ballots, other than straight ballots, must be by one of the Judges strung upon one string in such a manner that all the ballots, other than straight ballots, shall be in direct succession and immediate proximity upon said string; and all such ballots, other than straight ballots, shall thereupon be securely bound and replaced in the ballot-box. Immediately thereafter such pile of ballots, other than straight ballots, must be freed from such twine or other fastening without removal from the ballot-box, and such ballots must be taken out one at a time by one of the members of the board, and the name of each person marked in the ballots as voted for shall be distinctly read in connection with the office for which he is a candidate. After the ballots, other than straight ballots, have been so counted, and an official record, as heretofore mentioned, made, all ballots rejected for illegality must be strung upon separate strings of other than straight ballots; whereupon all the ballots thus strung shall be securely bound and be replaced in the ballot-box.]

SEC. 30. Section 1258 of the Political Code is hereby amended to read as follows:

SEC. 1258. Each clerk must write down each office to be filled and the name of each person marked in each ballot as voted for to fill such office, and keep the number of votes by tallies as they are read aloud.

SEC. 31. Section 1259 of the Political Code is hereby amended to read as follows:

SEC. 1259. The ballots, as soon as the names marked on them as voted for are read, must be strung on a string by one of the judges, and must not thereafter be examined by any person, but must, as soon as all are counted, be carefully sealed in a strong envelope, each member of the board writing his name across the seal.

SEC. 32. Four new sections are hereby added to the Political Code, to be numbered, respectively, 1213, 1214, 1215 and 1216, as follows:

SEC. 1213. No person shall falsely make, or fraudulently deface or destroy any certificate of nomination, or any part thereof, or file any certificate of nomination knowing the same or any part thereof to be falsely made, or suppress any certificate of nomination which has been duly filed, or any part thereof, or make, use, keep or furnish to others, except as in this code so authorized, any water-mark in the paper of any ballot paper, or disclose the same to any person not engaged in making, printing or distribution of ballot paper or ballots.

SEC. 1214. No person shall, during an election, remove or destroy any of the supplies or other conveniences placed in the voting booths or compartments, as provided in this code, for the purpose of enabling the voter to prepare his ballot. No person shall, during an election, remove, tear down or deface the cards printed for the instruction of voters.

SEC. 1215. No officer of election shall disclose to any person the name of any candidate for whom any elector has voted. No officer of election, nor any person, shall do any electioneering on election day within one hundred feet of any polling-place. No person shall receive any ballot from any polling-place before the closing of the poll. No person shall apply for or receive any ballot at any election precinct other than that in which he is entitled to vote. No person shall show his ballot after it is marked to any person in such a way as to reveal the contents thereof, or the name or names of the candidate or candidates for whom he has marked his ballot; nor shall any person, except a member of the Board of Election, receive from any voter a ballot prepared for voting, or any other than a ballot, or solicit the voter to show the same. No person shall ask another at a polling-place for whom he intends to vote. No voter shall receive a ballot from any other person than one of the ballot clerks; nor shall any other person than a ballot clerk deliver a ballot to such voter. No voter shall deliver to the Board of Election, or to any member thereof, any ballot other than the one he has received from the ballot clerk. No voter shall place any mark upon his ballot by which it may be afterward identified as the one voted by him.

SEC. 1216. In all counties, and cities and counties, in this State, having a Registrar of Voters and a Board of Election Commissioners, the powers conferred and the duties imposed in this code upon the County Clerks and other officers, in relation to matters of election and polling-places, shall be exercised and performed by such Registrar of Voters and Board of Election Commissioners, and all certificates of nomination required to be made to County Clerks shall be made to the Registrar of Voters.

SEC. 33. This act shall take effect on the 1st day of July, 1891.

MISCELLANEOUS.

ORDER TO SHOW CAUSE WHY ORDER OF SALE OF REAL ESTATE AND PERSONAL PROPERTY SHOULD NOT BE MADE.

IN THE SUPERIOR COURT OF THE County of Inyo, State of California.

In the matter of the estate of John Mullane deceased.

Order to show cause why an Order of sale of real estate and personal property should not be made.

Richard Hessian Sr. the Executor of the last will and testament of John Mullane, deceased, having filed his petition herein, duly verified, praying for an order of sale of all the real estate and all the personal property of said deceased, for the purposes therein set forth, it is therefore ordered by the Judge of said Court, that all persons interested in the estate of said deceased, appear before the said Superior Court on Saturday, the 18th day of April, 1891 at two o'clock in the afternoon of said day, at the Court room of said Court, at the Court House in the town of Independence, in the said County of Inyo, to show cause why an order should not be granted to the said Executor to sell all of the real estate and all of the personal property of the said decedent. And that a copy of this order be published at least four successive weeks in the Inyo Independent, a newspaper published and printed in the said County of Inyo.

GEO. M. GILL.
Judge of said Superior Court.
Dated March 19th, 1891.

[ENDORSED.]

In the Superior Court of the County of Inyo State of California.

In the matter of the Estate of John Mullane deceased.

Order to show cause why an order of sale of Real Estate and Personal Property should not be made.

Filed March 20th, 1891.

J. N. YANDELL,
Clerk.

COURT NOTES.

Geo. M. Gill, Superior Judge.

TUESDAY, March 31, 1891.

Estate of Ezra M. Goodale, deceased—Letters testamentary to Thomas J. and Maggie Goodale filed.

DIED.

HERTEL—At Cerro Gordo March 31st, John Hertel, native of Germany, aged 47 years.

CORDOVA—At Lone Pine, March 31st, Jesus Cordova.

JONES—At Lone Pine, March 31st, George W. Jones, native of Wales, aged about 43 years.

FISHER—At Citrus, March 31st, Fred Fisher, aged about 30 years.

John Fiehman came up from Keeler on yesterday's train.

There are twenty-seven men employed at the marble quarry.

The telegraph line from town to the station is to be repaired.

E. H. Edwards and John Lubken were up from Lone Pine last Tuesday.

Joe Schalten came down from Big Pine on Wednesday and returned yesterday.

Supervisors meet next Monday. It is expected that a full Board will be present.

Mr. and Mrs. T. J. Goodale of Fish Springs were in town during the week.

P. H. Mack Esq. has removed to the residence formerly occupied by Judge Conklin.

W. T. Bunney of Bishop will act as office Deputy at Independence for Assessor Chalfant.

Mrs. Yandell and daughter came down from Bishop last week and will reside at Independence.

The Misses Stuart started on Tuesday morning for Los Gatos, where they expect to remain for some time.

Supervisor Stewart came down from Big Pine last Monday to attend the special session. Mrs. Stewart accompanied him.

Will the friends please note that the Lone Pine Sunday School opens at 10 a. m. each Sunday. At Independence they begin at 2 p. m.

Charley Turner received a box from friends below on the 1st. Some of the boys are curious as to the contents. Wonder what it was?

The Crocker Bros. have sold their hotel and livery stable at Big Pine to Tom Williams of Mono Lake. Mr. Williams will take possession May 1st.

Johnny Irwin is the happy possessor of an Albenton filly, the first of the season, out of Biddy by Bismark, grand-dam, Jewel by Kingsley.

La Grippe has broken out again with great violence in the East. The death rate at Chicago last week was unprecedented in the history of the city.

The Supervisors met last Monday and canvassed the vote of the 5th District. It resulted in Mr. Fitzgerald's election, he having received 36 out of 38 votes.

Word was received at Inderendence on Monday that Dan Williams was very ill at Lone Pine. W. R. Johnson went down immediately to assist in caring for him.

Mr. Charles Luce goes north on to-morrow's train on his way to Sacramento. He will return to Verdi for a while and expects to be back here during the coming summer

A private letter received from Bakersfield states that Hon. A. R. Conklin is giving great satisfaction as Superior Judge of Kern County. He is an indefatigable worker and has won the confidence and respect of the people.

Supervisor Fitzgerald is expected to arrive in Independence on Monday evening from San Francisco. He is accompanied by a daughter of the late John C. Eddy, who comes here on business connected with the estate of the deceased.

Philip Gehrig's lease of the Independence Brewery expired on Tuesday, and he has located at Keeler. Joseph Fernbach will henceforth assume control of the institution. Mr. Fernbach says he expects a a first class brewer up from San Francisco in a few days, and an A1 beverage will be manufactured for customers.

It is proposed by the Camp Independence people to give a social at the residence of A. N. Bell next Friday evening for the purpose of obtaining funds to continue the school. Mr. Charles Turner has given excellent satisfaction as a teacher, and the people wish to retain him as long as possible. The object is a worthy one, and a pleasant evening will surely be enjoyed.

Among the bills approved by Governor Markham is one which relates to the use of tobacco in any form by persons under the age of 16 years. It is as follows: "Every person who sells or gives or furnishes in any way to another who is in fact under the age of 16 years any tobacco or any preparation of tobacco is guilty of a misdemeanor and on conviction thereof shall be punished by a fine not exceeding $100; provided, however, that this section shall not be deemed to apply to articles furnished on presentation of prescriptions from physicians authorized by law to practice medicine, nor to persons who supply such articles to their own children, nor to sales made to such minors upon written consent of the parents or guardians of such minors first obtained in writing by the vendor."

A DESERT MYSTERY.

The Breyfogle Mine Found At Last.

There is not a miner or old settler in the southern part of the State who is not familiar with the the story of the famous Breyfogle mine. It ranks with the Gunsight, the Pegleg and the Lost Cabin legends. Like them it has cost dozens of lives, and so unsuccessful and fatal have proved the many expeditions made in search of the mine that it has come to be regarded by many as a myth. Briefly, for the information of those who have never heard the tale, the story goes that away back in the early fifties a party in which was a man named Breyfogle set out for California by way of the Southern Utah road, a route which lay through the southern portions of Utah and Nevada, skirted Death Valley, traversed the Mojave desert and finally terminated in either the San Bernardino or Los Angeles valleys.

Breyfogle was something of a miner in his way, and while prospecting in a wild and forbidding region he found a place where he could literally dig great nuggets of gold out of the decomposed quartz or cement, as he called it, with his knife. As he described the place, there was a large deposit of an exceedingly rich character enough to make the whole party wealthy. He returned to the camp, but the travelers were short of provisions and water, the Indians were troublesome, and there was no time to waste in mining. They pushed on toward their destination, but between the Indians and thirst only a few of them ever reached civilization. Breyfogle told his story, exhibited the nuggets he had dug out and carefully preserved, and then spent the rest of his life in a fruitless search for the deposit. Others who heard the story followed his example, and for upward of forty years the Breyfogle mine has been a veritable will-o'-the wisp, luring men to destruction in the terrible deserts of Southeastern California and Southwestern Nevada.

Something like two months ago George Montgomery, an experienced miner well known in the Wood river region of Idaho, was on a prospecting trip in the region to the southeastward of Death valley. It should be premised that the old Utah road after leaving San Bernardino city runs through the Cajon pass and then strikes off in a northeasterly direction across the Mojave desert, passing Resting Springs, the Kingston mountains, and then traversing the Pahrump valley. This valley lies just on the boundary line between California and Nevada and has a general northwesterly one southeasterly course, the Kingston mountains lying to the west and the Pahrump range to the east.

While prospecting in the mountains last named and at the upper end of the valley Montgomery made a discovery early in January which bears every indication of being the long sought Breyfogle mine, or, at least one exactly similar. But the location answers to that given by Breyfogle, while the gold has been found just as he said—so plentiful that it could be dug out in nuggets with a knife.

One ledge located by Montgomery is eight feet wide, and has been traced by its outcroppings for a distance of 9,000 feet. In the decomposed surface rock the gold is found almost like plums in a pudding. Pieces of quartz picked out are from a quarter to a half bright yellow gold, while, with a hand-mortar the lucky discoverer pounded out a yeast powder can full of nuggets of various sizes. All along the ledge free gold is found in quantities that astonish the oldest prospectors and which seem scarcely credible.

After making several locations Montgomery spread the news of his discovery, the result being that some thirty or forty miners are now at work in the valley, while others are hurrying in from various directions. Montgomery himself packed up as large a quantity of the richest specimens as he could carry and made his way across the desert to Daggett, the nearest railroad point, 160 miles away. From there he came to San Francisco, where he is getting tools, supplies, etc., to open the mines. He will return at the earliest practicable moment, put up a small mill and go to work getting out ore.

To the question whether he was looking for capital or a purchaser Mr. Montgomery returns an emphatic negative. The mines, he says, are the richest he ever saw, and he is satisfied that he can realize a fortune by working them. There ought to be plenty of placer gold in the gulches leading from the ledges that have been discovered, but no effort has been made to find any. All the miners yet in the camp are busy on the quartz claims they have located. On one claim taken up by Montgomery a cross-cut has been pushed for twenty feet across the vein without striking the hanging wall, and it is free milling ore all the way.

Besides the deposits of gold, some rich silver veins have been found, assays from which run over a hundred ounces to the ton. Lead and copper also abound, but at present gold is the sole object of search.

There is plenty of mesquite wood for fuel in the valley within three or four miles of the newly-discovered camp, while in the mountains fifteen miles away are forests which afford abundance of timbering material. Water can be had at a moderate depth in Pahrump valley, while at Ash Meadows, fifteen miles away, are streams which could be utilized for power.

The camp has been named Montgomery in honor of its discoverer, and a meeting has been called for April 1st to organize a mining district under the laws governing such cases. It is emphatically what is known as a "poor man's camp." The ore is of a character that can be readily worked with hand mortar or arastra, while there is almost a certainty of rich placer deposits.

The nearest railroad point to the Pahrump valley is Daggett, on the Atlantic and Pacific Railroad. From that point it requires four days to make the journey of 160 miles in a northwesterly direction. There is a good road, and water at frequent intervals. Feed, however, must be carried for animals., and no one should for a moment think of undertaking the journey on foot. A party numbering several well-known mining men from this city is now en route, having left early last week. Included in the number are Messrs. Murphy, Grant, William Irving, Brydon, Callahan, McDonald and others. From the specimens shown and from other corroboratory details they are confident that the discoveries will turn out well.

In any event the Breyfogle mystery seems to have been solved, and perhaps this fact will give another stimulus to the search for the Gunsight and the Pegleg mines.—*Chronicle.*

A number of miners in and about Candelaria are thinking of leaving for the scene of the alleged discovery of the Breyfogle mine on the California and Nevada line, about 250 miles south of here. The Carson & Colorado Railroad has conveyed a number of San Francisco mining men to the southward the past ten days, who were bound for the reported strike.—*Chloride Belt, Candelaria.*

Correspondence.

LONE PINE, April 1st, '91.

ED. INDEPENDENT: *Dear Sir:*—A man by the name of Geo. W. Jones who has been working at Cerro Gordo for the past year died here last night of La Grippe. He leaves a wife and two children living in Stockton, California. He was aged about 43 years and a Welchman by birth.

Jack Hertel, an old time Cerro Gordo-ite, was preparing to leave the Hill yesterday for the valley, and when at the store of Henry Boland he expired.

On account of the water being so near the top of the ground in the Lone Pine cemetery, the people have buried several of the dead near the road going to the depot. This, of course, was only for the time being. A location has been made, and in future the cemetery will be west of the Lucas ranch and near the foot of the mountain, where it will always be high and dry.

Our old friend, D. H. Williams, has been and is now unconscious; has been so for the past 55 hours. A change must certainly come soon.

Martin Mee is at the home of Mr. John Dodge. He is quite well and has the best of care, as has also D. H. Williams under the care of Mr. and Mrs. J. J. Stewart of the Whitney House.

Nearly the whole population here are having or have had the La Grippe.

J.

Staying With It

Sheriff Gorman is determined to break up the practice of selling whiskey to the Indians. By constant vigilance the traffic has become almost suspended at Independence. On Tuesday Under-Sheriff Holland discovered a drunken Indian in town and promptly ran him in. He was obdurate for a while but yesterday confessed that he had obtained his whiskey from Felix Gomez at Lone Pine. Holland went to Lone Pine Wednesday, arrested the man and brought him up for trial. Residents of Lone Pine say that the Gomez dwelling is a constant rendezvous for Indians and that he purchases considerable whiskey. The evidence in the case is Indian testimony, and whether a conviction is secured or not it will serve to render the fire-water venders more cautious, and constant arrests will in time break up the detestable practice.

Fatal Accident

Fred Fisher, an employee of the Marble Company at Swansea, was struck by a falling slab and fatally injured last Monday. He was placed upon a hand-car en route for Independence and died just after leaving Citrus station. His remains were brought to town, and John Baxter, J. P., held an inquest Wednesday morning. The verdict rendered by the jury was to the effect that it was an unavoidable accident, and no blame attaches to any one. One arm was severed from the body and both legs were broken. Charles Luce made suitable arrangements for a decent burial, and the remains were interred on Tuesday afternoon, services being rendered at the grave by Rev. J. H. Wansor. A brother of the deceased lives at Sacramento.

Now is a golden opportunity to secure the finest piece of land under the Eastside canal. For the quality of it intending purchasers are referred to Superintendent McIver and the *Index*. Only six dollars an acre.

MISCELLANEOUS.

For Sale!

ONE HUNDRED AND SIXTY ACRES, THE CHOICEST TRACT OF LAND UNDER THE

Eastside Canal.

There are irrigating ditches on each subdivision of forty acres, and the tract touches the canal so that no long irrigating ditches will have to be kept in repair. The land is in a nook sheltered by the foot hills of the Inyo Mountains. Mr. McIver, the Superintendent of the canal, kindly advised the selection of the location, and to him reference is made for the truth of the description. Six dollars per acre will be accepted for the tract. Address,

C. MULHOLLAND,
Independence.

ALIAS SUMMONS.

MARY A. BALL, Plaintiff, vs. ROBERT BALL, Defendant.

Action brought in the Superior Court of the County of Inyo, State of California, and the Complaint filed in said County of Inyo, in the office of the Clerk of said Superior Court.

The people of the State of California send greeting to Robert Ball, Defendant:

You are hereby required to appear in an action brought against you by the above-named Plaintiff in the Superior Court of the County of Inyo, State of California, and to answer the Complaint filed therein, within ten days (exclusive of the day of service), after the service on you of this Summons—if served within this County; or if served elsewhere, within thirty days.

The said action is brought to obtain a decree dissolving the bonds of matrimony now existing between the Plaintiff and Defendant and for costs of suit, as will more fully appear by reference to the complaint on file herein.

And you are hereby notified that if you fail to appear and answer the said complaint, as above required, said plaintiff will apply to the Court for the relief therein demanded.

Witness my hand and the Seal of said Superior Court, of the County of Inyo, State of California, this 28th day of February, A. D. 1891.

[SEAL] J. N. YANDELL, Clerk.
P. H. MACK, Attorney for Plaintiff.

Notice of Forfeiture.

TO H. P. LIVINGSTON, OR WHOEVER at present may represent his interest in the Caldera Mine, and Peter Meyer: You are hereby notified that I have expended One hundred [$100] dollars in labor and improvements upon the Caldera Lode, situated in Cerro Gordo Mining District, Inyo county, California, as will appear by certificate filed in the office of the Recorder of said district for the year 1890, in order to hold said premises under the provisions of Section 2,324 Revised Statutes of the United States, being the amount required to hold the same for the year ending December 31, 1890, and if within 90 days from the date of this publication you fail or refuse to contribute your proportion of said expenditure, together with the cost of publication, as co-owners, your interests in said claim will become the property of the subscriber under the provisions of said Section 2,324.

O. G. FUENTES.

Dated Cerro Gordo, January 2, 1891.

Takes 1000 people to buy Dr. Sage's Catarrh Remedy, at 50 cents a bottle, to make up $500.

One failure to cure would take the profit from 4000 sales.

Its makers profess to cure "cold in the head," and even chronic catarrh, and if they fail they pay $500 for their over-confidence,—

Not in newspaper words but in *hard cash!* Think of what confidence it takes to put that in the papers—and *mean* it.

Its makers believe in the Remedy. Isn't it worth a trial? Isn't any trial preferable to catarrh?

After all, the mild agencies are the best. Perhaps they work more slowly, but they work *surely*. Dr. Pierce's Pleasant Pellets are an *active* agency but *quiet* and *mild*. They're sugar-coated, easy to take, never shock nor derange the system and half their power is in the mild way in which their work is done. Smallest, cheapest, easiest to take. One a dose. Twenty-five cents a vial. Of all druggists.

Time changes in so queer a way,
It quite deceives a dunce;
To-day will soon be yesterday—
Yet to-morrow it was once!

DISORDERS WHICH AFFECT THE KIDNEYS

Are among the most formidable known. Diabetes, Bright's disease, gravel and other complaints of the urinary organs are not ordinarily cured in severe cases, but they may be averted by timely medication. A useful stimulant of the urinary glands has ever been found in Hostetter's Stomach Bitters, a medicine which not only affords the requisite stimulus when they become inactive, but increases their vigor and secretive power. By increasing the activity of the kidneys and bladder, this medicine has the additional effect of expelling from the blood impurities which it is the peculiar office of those organs to eliminate and pass off. The Bitters is also a purifier and strengthener of the bowels, an invigorant of the stomach, and a matchless remedy for biliousness and fever and ague. It counteracts a tendency to premature decay, and sustains and comforts the aged and infirm.

It is the man that never advertises who discovers that he gets more dust on his goods than in his cash drawer.

Those who use Dobbins' Electric Soap each week (*and their name is legion*) save their clothes and strength, and let the *soap* do the work. Did *you* ever try it? If not, *do so* next Monday *sure*. Ask your grocer for it.

Something of an Acrobat—Wooden—Yes, as you say, Miss Smilax' eyes and hair are very fine, but I think her crowning glory is her feet.

HOW'S THIS!

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by taking Hall's Catarrh Cure.

F. J. CHENEY & CO., Props., Toledo, O.

We, the undersigned, have known F. J. Cheney for the last 15 years, and believe him perfectly honorable in all business transactions and financially able to carry out any obligation made by their firm.

WEST & TRUAX, Wholesale Druggists, Toledo, O.
WALDING, KINNAN & MARVIN, Wholesale Druggists, Toledo, O.

Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system. Price 75c. per bottle. Sold by all Druggists.

Innocent—Why do the gentlemen always go out between the acts at the opera? Wiseacre—My brother says to get an opera glass.

Dr. Wallace Ely has removed his offices to 215 Powell st., San Francisco, Cal., where he continues to give special attention to Kidneys, Bladder, Prostate Gland and all diseases arising therefrom. Diabetes and Bright's Disease treated according to the latest approved method. Most cases can be treated successfully by correspondence. Consultations daily from 10 A. M. to 4 P. M. WALLACE ELY, M. D., 215 Powell St., 4 doors from Geary St., San Francisco, Cal.

The Texas *Siftings* puts it this way: Never do to-day what some one else will do for you to-morrow.

RUPTURE AND PILES CURED.

We positively cure rupture and all rectal diseases without pain or detention from business. No cure, no pay, and no pay until cured. Address for pamphlet Drs. Porterfield & Losey, 838 Market street, San Francisco.

If serpents are of thoughts possessed,
With envy Brenhardt's must be green
As they reflect how much more blest
Were those that fed on Egypt's Queen.

"*Brown's Bronchial Troches*" are widely known as an admirable remedy for Bronchitis, Hoarseness, Coughs and Throat troubles. *Sold only in boxes.*

"A penny for your thoughts," she said
And then he deemed it strange,
After his inmost thoughts she'd read,
That she should ask for change.

WANTED.—A thoroughly honest woman, in whose trust we may place a stock of goods for sale on commission. Address, stating age, experience and references, W. B. Co., 220 Sansome St., San Francisco, Cal.

"August Flower"

For Dyspepsia.

A. Bellanger, Propr., Stove Foundry, Montagny, Quebec, writes: "I have used August Flower for Dyspepsia. It gave me great relief. I recommend it to all Dyspeptics as a very good remedy."

Ed. Bergeron, General Dealer, Lauzon, Levis, Quebec, writes: "I have used August Flower with the best possible results for Dyspepsia."

C. A. Barrington, Engineer and General Smith, Sydney, Australia, writes: "August Flower has effected a complete cure in my case. It acted like a miracle."

Geo. Gates, Corinth, Miss., writes: "I consider your August Flower the best remedy in the world for Dyspepsia. I was almost dead with that disease, but used several bottles of August Flower, and now consider myself a well man. I sincerely recommend this medicine to suffering humanity the world over."

BEBEE;

or,

TWO LITTLE WOODEN SHOES.

By "OUIDA."

CHAPTER XI.

Bebee was a dreamer in her way, and aspired to be a scholar, too. But all the same, she was not a little fool.

She had been reared in hardy, simple, honest ways of living, and would have thought it as shameful as a theft to have owed her bread to other folk.

So, though she had a wakeful, restless night, full of strange phantasies, none the less was she out in her garden by daybreak; none the less did she sweep out her floor and make her mash for the fowls, and wash out her bit of linen and hang it to dry on a line among the tall, flaunting hollyhocks that were so proud of themselves because they reached to the roof.

"What do you want with books, Bebee?" said Reine, the sabot maker's wife, across the privet hedge, as she also hung out her linen. "Franz told me you were reading last night. It is the silver buckles have done that; one mischief always begets another."

"Where is the mischief, good Reine?" said Bebee, who was always prettily behaved with her elders, though, when pushed to it, she could hold her own.

"The mischief will be in discontent," said the sabot maker's wife. "People live on their own little patch, and think it is the world; that is as it should be—everybody within his own, like a nut in its shell. But when you get reading, you hear of a swarm of things you never saw, and you fret because you cannot see them, and you dream, and dream, and a hole is burnt in your soup pot, and your dough is as heavy as lead. You are like bees that leave their own clover fields to buzz themselves dead against the glass of a hothouse."

Bebee smiled, reaching to spread out her linen; she said nothing.

"What is it talking to them?" she thought; "they do not know."

Always the neighbors and friends of her infancy seemed so far, far away; creatures of a distant world that she had long left; it was no use talking, they never would understand.

"Antoine should never have taught you your letters," said Reine, groaning under the great blue shirts she was hanging on high among the leaves. "I told him so at the time. I said: 'The child is a good child, and spins, and sews, and sweeps, rare and fine for her age—why go and spoil her?' But he was always headstrong. Not a child of mine knows a letter—the saints be praised! nor a word of any tongue but our own good Flemish. You should have been brought up the same. You would have come to no trouble then."

"I am in no trouble, dear Reine," said Bebee, scattering the potato peels to the clacking poultry, and she smiled into the face of the golden oxlips that nodded to her back again in sunshiny sympathy.

"Not yet," said Reine, hanging her last shirt.

But Bebee was not hearing; she was calling the chickens, and telling the oxlips how pretty they looked in the borders; and in her heart she was counting the minutes till the old Dutch cuckoo clock at Mere Krebs'—the only clock in the lane—should crow out the hour at which she went down to the city.

She loved the hut, the birds, the flowers; but they were little to her now compared with the dark golden picturesque square, the changing crowds, the frowning roofs, the gray stones, and the delight of watching through the shifting colors and shadows of the throngs for one face and one smile.

"He is sure to be there," she thought, and started half an hour earlier than was her wont. She wanted to tell him all her rapture in the book—no one else could understand.

But all the day through he never came.

Bebee sat with a sick heart and a parched little throat, selling her flowers and straining her eyes through the tumult of the square.

The whole day went by, and there was no sign of him.

The flowers had sold well; it was a feast day; her pouch was full of pence—what was that to her?

She went and prayed in the cathedral, but it seemed cold and desolate and empty; even the storied windows seemed dark.

"Perhaps he is gone out of the city," she thought; and a terror fell on her that frightened her, it was so unlike any fear that she had ever known—even the fear when she had seen death on old Antoine's face had been nothing like this.

Going home through the streets she passed the cafe of the Trois Freres that looks out on the trees of the park, and that has flowers in its balconies, and pleasant windows that stand open to let the sounds of the soldiers' music enter. She saw him in one of the windows. There were amber and scarlet and black; silks and satins and velvets. There was a fan painted and jeweled. There were women's faces. There was a heap of purple fruit and glittering sweetmeats. He laughed there. His beautiful Murillo head was dark against the white and gold within.

Bebee looked up—paused a second—then went onward with a thorn in her heart.

He had not seen her.

"It is natural, of course—he has his world—he does not think often of me—there is no reason why he should be as good as he is," she said to herself as she went slowly over the stones.

She had the dog's soul—only she did not know it.

But the tears fell down her cheeks, as she walked.

Fasting, next day at sunrise she confessed to Father Francis:

"I saw beautiful rich women, and I envied them; and I could not pray to Mary last night for thinking of them—for I hated them so much."

But she did not say:

"I hated them because they were with him."

Out of the purest little soul, love entering drives forth candor.

"That is not like you at all, Bebee," said the good old man, as she knelt at his feet on the bricks of his little bare study, where all the books he ever spelt out were treatises on the art of bee keeping.

"My dear, you never were covetous at all, nor did you ever seem to care for the things of the world. I wish Johan had not given you those silver buckles; I think they have set your little soul on vanities."

"It is not the buckles; I am not covetous," said Bebee; and then her face grew warm. She did not know why, and she did not hear the rest of Father Francis' admonitions.

CHAPTER XII.

But the next noon time brought him to the market stall, and the next also, and so the summer days slipped away, and Bebee was quite happy if she saw him in the morning time, to give him a fresh rose, or at evening by the gates, or under the beech trees, when he brought her a new book and sauntered a while up the green lane beside her.

An innocent, unconscious love like Bebee's wants so little food to make it all content. Such mere trifles are beautiful and sweet to it. Such slender stray gleams of light suffice to make a broad, bright, golden noon of perfect joy around it.

All the delirium, and fever, and desire, and despair, that are in maturer passion, are far away from it; far as is the flash of the meteor across sultry skies from the blue forget-me-not down in the brown meadow brook.

It was very wonderful to Bebee that he, this stranger from Rubes' Fairyland, could come at all to keep pace with her little clattering wooden shoes over the dust and the grass in the dim twilight time. The days went by in a trance of sweet amaze, and she kept count of the hours no more by the cuckoo clock of the mill house or the deep chimes of the Brussels belfries; but only by such moments as brought her a word from his lips, or even a glimpse of him from afar, across the crowded square.

She sat up half the nights reading the books he gave her, studying the long, cruel polysyllables and spelling slowly through the phrases that seemed to her so cramped and tangled, and which yet were a pleasure to unravel, for sake of the thought they held.

For Bebee, ignorant, little, simple soul that she was, had a mind in her that was eager, observant, quick to acquire, skillful to retain; and it would happen in certain times that Flamen, speaking to her of the things which he gave to her to read, would think to himself that this child had more wisdom than was often to be found in schools.

Meanwhile he pondered various studies in various stages of a Gretchen, and made love to Bebee—made love at least by his eyes and by his voice, not hurrying his pleasant task, but hovering about her softly, and mindful not to scare her, as a man will gently lower his hand over a poised butterfly that he seeks to kill, and which one single movement, a thought too quick, may scare away to safety.

Bebee knew where he lived in the street of Mary of Burgundy; in an old palace that belonged to a great Flemish noble, who never dwelt there himself; but to ask anything about him—why he was there? what his rank was? why he stayed in the city at all? was a [illegible] her thoughts.

Psyche, if she had been as simple and loyal as Bebee was, would never have lighted her own candle; but even Psyche would not have borrowed any one else's lamp to lighten the love darkness.

To Bebee he was sacred, unapproachable, unquestionable; he was a wonderful, perfect happiness that had fallen into her life; he was a gift of God, as the sun was.

She took his going and coming as she took that of the sun, never dreaming of reproaching his absence, never dreaming of asking if in the empty night he shone on any other worlds than hers.

It was hardly so much a faith with her as an instinct; faith must reason ere it know itself to be faith. Bebee never reasoned any more than her roses did.

The good folks in the market place watched her a little anxiously; they thought ill of that little moss rose that every day found its way to one wearer only; but after all they did not see much, and the neighbors nothing at all. For he never went home to her, nor with her, and most of the time that he spent with Bebee was in the quiet evening shadows, as she went up with her empty basket through the deserted country roads.

Bebee was all day long in the city, indeed, as other girls were, but with her it had always been different. Antoine had always been with her up to the day of his death; and after his death she had sat in the same place, surrounded by the people she had known from infancy, and an insult to her would have been answered by a stroke from the cobbler's strap or from the tinker's hammer. There was one girl only who ever tried to do her any harm—a good looking, stout wench, who stood at the corner of the Montagne de la Cour with a stall of fruit in the summer time, and in winter time drove a milk cart over the snow. This girl would get at her sometimes and talk of the students, and tell her how good it was to get out of the town on a holiday, and go to any one of the villages where there was Kermesse and dance, and drink the little blue wine, and have trinkets bought for one, and come home in the moonlight in a char-a-blanc, with the horns sounding, and the lads singing, and the ribbons flying from the old horse's ears.

"She is such a little close sly thing!" thought the fruit girl sulkily. To vice, innocence must always seem only a superior kind of chicanery.

"We dance almost every evening, the children and I," Bebee had answered when urged fifty times by this girl to go to fairs and balls at the wineshops. "That does just as well. And I have seen Kermesse once at Malines—it was beautiful. I went with Mere Dax, but it cost a great deal! I know, though she did not let me pay."

"You little fool!" the fruit girl would say, and grin, and eat a pear.

But the good honest old women who sat about in the Grande place hearing, had always taken the fruit girl to task when they got her by herself.

"Leave the child alone, you mischievous one," said they. "Be content with being base yourself. Look you, Lisette—she is not one like you to make eyes at the law students, and jester the painter lads for a day's outing. Let her be, or we will tell your mother how you leave the fruit for the gutter children to pick and thieve, while you are stealing up the stairs into that young French fellow's chamber. Oh, oh! a fine beating you will get when she knows!"

Lisette's mother was a fierce and strong old Brabantoise, who exacted heavy reckoning with her daughter for every single plum and peach that she sent out of her dark sweet smelling fruit shop to be sunned in the streets, and under the students' love glances.

So the girl took heed, and let Bebee alone.

"What should I want her to come with us for?" she reasoned with herself. "She is twice as pretty as I am; Jules might take to her instead—who knows?"

So that she was at once savage and yet triumphant when she saw, as she thought, Bebee drifting down the high flood of temptation.

"Oh, oh, you dainty one!" she cried one day to her. "So you would not take the nuts and mulberries that do for us common folk, because you had a mind for a fine pine out of the hothouses! That was all, was it? Eh, well—I do not begrudge you. Only take care; remember, the nuts and mulberries last through summer and autumn, and there are heaps of them on every fair stall and street corner; but the pine—that is eaten in a day, one spring time, and its like does not grow in the hedges. You will have your mouth full of sugar an hour—and then, oh!—you will go famished all the year."

"I do not understand," said Bebee, looking up, with her thoughts far away, and scarcely hearing the words spoken to her.

"Oh, pretty little fool! you understand well enough," said Lisette, grinning, as she rubbed up a melon. "Does he give you fine things? You might let me see!"

"Oh, pretty little fool! You understand well enough."

"No one gives me anything."

"Chut! you want me to believe that. Why, Jules is only a lad and his father is a silk mercer and only gives him a hundred francs a month, but Jules buys me all I want—somehow—or do you think I would take the trouble to set my cap straight when he goes by? He gave me these ear rings, look. I wish you would let me see what you got."

But Bebee had gone away—unheeding—dreaming of Juliet and of Jeanne d'Arc, of whom he had told her tales.

He made sketches of her sometimes, but seldom pleased himself.

It was not so easy as he had imagined that it would prove to portray this little flower like face, with the clear eyes and the child's open brow. He who had painted Phryne so long and faithfully had got a taint on his brush—he could not paint this pure, bright, rosy dawn—he who had always painted the glare of midnight gas on rouge or rags. Yet he felt that if he could transfer to canvas the light that was on Bebee's face he would get what Scheffer had missed. For a time it eluded him. You shall paint a gold and glistening brocade, or a fan of peacock's feathers, to perfection, and yet, perhaps, the dewy whiteness of the humble little field daisy shall baffle and escape you.

He felt, too, that he must catch her expression flying, as he would do the flash of a swallow's wing across a blue sky; he knew that Bebee, forced to studied attitudes in an atelier, would be no longer the ideal that he wanted.

More than once he came and filled in more fully his various designs in the little hut garden, among the sweet gray lavender and the golden disks of the sunflowers; and more than once Bebee was missed from her place in the front of the Broodhuis.

The Varnhart children would gather now and then open mouthed at the wicket, and Mere Krebs would shake her head as she went by on her sheepskin saddle, and mutter that the child's head would be turned by vanity; and old Johan would lean on his stick and peer through the sweet brier, and wondered stupidly if this strange man who could make Bebee's face beam over again upon that panel of wood could not give him back his dead daughter who had been pushed away under the black earth so long, long before, when the red mill had been brave and new, the red mill that the boys and girls called old.

But except these no one noticed much.

Painters were no rare sights in Brabant.

The people were used to see them coming and going, making pictures of mud and stones, and ducks and sheep, and of all common and silly things.

"What does he pay you, Bebee?" they used to ask, with the shrewd Flemish thought after the main chance.

"Nothing," Bebee would answer, with a quick color in her face, and they would reply in contemptuous reproof, "Careless little fool; you should make enough to buy you wood all winter. When the man from Ghent painted Trine and her cow, he gave her a whole gold bit for standing still so long in the clover. The Kreibs would be sure to lend you her cow if it be the cow that makes the difference."

Bebee was silent, weeding her carnation bed; what could she tell them that they would understand?

She seemed so far away from them all—those goods friends of her childhood—now that this wonderful new world of his giving had opened to her sight.

She lived in a dream.

Whether she sat in the market place taking copper coins, or in the moonlight with a book on her knees, it was all the same. Her feet ran, her tongue spoke, her hands worked; she did not neglect her goat or her garden, she did not forsake her house labors or her good deeds to old Annemie; but all the while she only heard one voice, she only felt one touch, she only saw one face.

Here and there—one in a million—there is a female thing that can love like this, once and forever.

Such an one is dedicated, birth upwards, to the Mater Dolorosa.

He had something nearer akin to affection for her than he had ever had in his life for anything, but he was never in love with her—no more in love with her than with the moss rosebuds that she fastened in his breast. Yet he played with her, because she was such a little, soft, tempting, female thing; and because, to see her face flush and her heart heave, to feel her fresh feelings stir into life, and to watch her changes from shyness to confidence, and from frankness again into fear, was a natural pastime in the lazy golden weather.

That he spared her as far as he did—when after all she would have married Jeannot anyhow—and that he sketched her face in the open air, and never entered her hut and never beguiled her to his own old palace in the city, was a new virtue in himself for which he hardly knew whether to feel respect or ridicule; anyway it seemed virtue to him.

So long as he did not seduce the body it seemed to him that it could never matter how he slew the soul—the little, honest, happy, pure, frank soul, that amidst its poverty and hardships was like a robin's song to the winter sun.

"Hoot, toot, pretty innocent, so you are no better than the rest of us," hissed her enemy, Lisette, the fruit girl, against her as she went by the stall one evening as the sun set. "Prut! so it was no such purity after all that made you never look at the student lads and the soldiers, eh!—You were so dainty of taste, you must needs pick and choose, and, Lord's sake, after all your coyness, to drop at a beckoning finger as one may say—pong!—in a minute, like an apple over ripe! Oh, he, you sly one!"

Bebee flushed red, in a sort of instinct of offense; not sure what her fault was, but vaguely stung by the brutal words.

Bebee walked homeward by him, with her empty baskets; looked at him with grave wondering eyes.

"What did she mean? I do not understand. I must have done some wrong—or she thinks so. Do you know?"—

Flamen laughed, and answered her evasively:

"You have done her the wrong of a fair skin when hers is brown, and a little foot while hers is as big as a troopers; there is no greater sin, Bebee, possible in woman to woman."

"Hold your peace, you shrill jade!" he added, in anger to the fruiterer, flinging at her a crown piece, that the girl caught, and bit with her teeth with a chuckle. "Do not heed her, Bebee. She is a coarse tongued brute, and is jealous, no doubt."

"Jealous!—of what?"

The word had no meaning to Bebee.

"That I am not a student or a soldier, as her lovers are."

As her lovers were! Bebee felt her face burn again. Was he her lover then? The child's innocent body and soul thrilled with a hot, sweet delight and fear commingled.

Bebee was not quite satisfied until she had knelt down that night and asked the Master of all poor maidens to see if there were any wickedness in her heart, hidden there like a bee in a rose, and if there were, to take it out and make her worthier of this wonderful new happiness in her life.

(TO BE CONTINUED.)

Some Causes of Headache.

Neuralgic headaches are the expression of an immense number of irregularities and diseases. Decayed teeth are frequent causes, and in not a few instances severe headaches of this sort are clearly due to teeth so slightly decayed that only a dentist can detect the defect.

Headaches, especially those in which the pain is felt most in the forehead, are frequently caused by inequalities in the eye. And often very slight defects, scarcely appreciable to the victim, are sufficient to cause them. Many persons have one normal eye, while the other is slightly abnormal.

In such cases there is considerable strain if the eyes are used much in reading, which is especially liable to cause headache. The only remedy in these cases is, of course, a proper pair of glasses. Headache from defective sight is not always limited to the region of the forehead, for sick headache is frequently associated with it.—Boston Herald.

THE LONE WOMAN.

No city in the United States can show as many women doing business for themselves and living in comfortable circumstances as San Francisco. And why? Go ask at least one-half of them. They will tell you their money is taken care of for them at the PACIFIC BANK, whose motto is "True in trusts."

CANNON'S SHEEP DIP.

It has been fully demonstrated that Cannon's Sheep Dip is superior to all others. It is sold by J. W. Grace & Co., 430 California street, San Francisco, Cal.

Henpecked husbands are a unit in favor of the closure rule. Closure means shut up.

VALUABLE DISCOVERY FOR THE BLIND.

Dr. La Grange wishes to make known his *New Treatment* for the cure of all diseases of the Eye: *—Cataract, Defective Vision, Inflammation*, etc., etc., without Operation or Pain. The remedy can be applied by the patient, and is simple, safe and sure in its effects, strengthening the muscles and nerves of the eye, removing pain almost instantaneously. It is a marvelous discovery and a blessing to the sufferer.

For further particulars address with stamped envelope, R. J. LA GRANGE, M. D., 215 Powell St., fourth door from Geary, San Francisco, Cal.

Office Hours, 11 till 8.

The devil never asks anybody to go further than the next corner to begin with.

CHILLS AND FEVER CURED.

G. W. Messenger, 216 Seneca Street, Buffalo, N. Y., writes:

"I was a great sufferer for many years with chills and fever, and tried remedies of all kinds, but found no relief until a friend of mind told me to buy a box of BRANDRETH'S PILLS and take them as directed. I used two boxes and believe that I am cured, as I have not been troubled with them for the past year. I cheerfully recommend them to all who suffer."

No other baking powder does such work.

A Brawny Bargee at the Helm.

To-day it is raining in torrents. He knows by experience the value of a "Fish Brand Slicker." It is his sole article of dress, and to him worth drawers, shirt, coat, vest, and pants. He'll tell you tales by the hour of storms lasting days and nights when that "Slicker" made up the whole difference between comfort and misery; and all for a mere trifle from his week's pay. Why don't you buy one for yourself? To realize how little it costs, think how long it lasts. It will outwear four suits of clothes. Better get one to-day, before you forget it. A day's delay may cause a month of sickness, and cost a hundred times the price of a Slicker. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER, - Boston, Mass.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. G. G. ROOT, M. C., 183 Pearl St. New York.

CANNON'S DIP.

The Advantages Claimed for this Dip are:

It is non-poisonous, and can be used with perfect safety at all times and in all circumstances.

It saves time and trouble, no precautions being required as in the case of poisonous Dips.

It does not stain the wool, but promotes and improves its growth, improves the appearance and increases the value of the wool.

It is composed of the very best materials, and never varies in strength and quality.

It never fails to produce the desired effect.

Its effects are lasting.

It is easy to use and does not require heating.

Its use may be repeated on the same Sheep as often as desired without the slightest risk of injury.

Non-Poisonous, Easy to Use, and Always Effective.

LIBERAL DISCOUNTS TO THE TRADE.

J. W. GRACE & CO.,
430 CALIFORNIA STREET, San Francisco, Cal., Agents for the Pacific Coast.

Are You Fortified?

Your health is a citadel. The winter's storms are the coming enemy. You know that this enemy will sit down for five long months outside this citadel, and do its best to break in and destroy. Is this citadel garrisoned and provisioned? The garrison is your constitution. Is it vigorous or depleted? How long can it fight without help? Have you made provision for the garrison by furnishing a supply of **SCOTT'S EMULSION** of pure Norwegian Cod Liver Oil and Hypophosphites of Lime and Soda? It restores the flagging energies, increases the resisting powers against disease; *cures Consumption, Scrofula, General Debility, and all Anæmic and Wasting Diseases (especially in Children)*, keeps coughs and colds out, and so enables the constitution to hold the fort of health. **Palatable as Milk.**

SPECIAL.—Scott's Emulsion is non-secret, and is prescribed by the Medical Profession all over the world, because its ingredients are scientifically combined in such a manner as to greatly increase their remedial value.

CAUTION.—Scott's Emulsion is put up in salmon-colored wrappers. Be sure and get the genuine. Prepared only by Scott & Bowne, Manufacturing Chemists, New York. Sold by all Druggists.

A GIRL'S TRUE SPHERE.

Marriage not the Only Course for her.

MISTAKES IN NOTIONS OF GIRLHOOD.

Judge Pryor's Wife Tells How Girls Should be Trained.

What have women done? I know what these fingers have done. To remember all carries me back to Virginia through the most exciting pages of American history. They were trained to do elegant embroidery and to play well the best classical music. During the Civil war and since they have done everything that fingers could do. In war times they plaited and sewed my children's hats, made all their garments, even little kid and cloth boots, while their father was in prison.

After the struggle, in the experiment we made to earn a living, these hands copied briefs for the lawyer, then too poor to afford a clerk, the while sewing for the seven dear children. They made every robe from the christening to the bridal for my two elder daughters, and the work in which they have engaged since has been most varied.

Woman's sphere is where the Lord has placed her. We all deplore the conditions that reduce young children and tender women to hard labor for which they have neither fitness nor strength, but I believe that things adjust themselves in the end and we mold circumstances till we find our level. Home is a sweet place, but it is not the only place, nor are maternal the only duties of womanhood. Life is made up of a series of conditions, and the talents of men and women are equally varied.

I deny that woman needs a special training for what you are pleased to term the profession of motherhood. Maternal love is innate. It is a part of woman's nature. She may be a hoiden in her youth, a heartless lover or a treacherous friend, false to every trust, and still be a good mother. Even the savage brute is kind to her young, and will risk her life in protecting it. I believe that the training and education necessary to the perfect development of womanhood will fit the girl for any sphere in life she chooses to enter.

I do not believe that marriage is all this world holds for the sex, nor that a wife should round herself to the four walls of her home. It is necessary for the height and breadth and freshness of its atmosphere that she go out, mix with the elements and become imbued with the spirit, the progress, the thought that is accelerating the motion of the earth.

The world is moving with a velocity so great that one cannot afford to stand still, and the mother must be up and about and around, even if she is obliged to take her little brood with her, to watch the swelling tide. I am always so glad to welcome the young woman in any new line. When I take up the newspaper I begrudge the valuable space given to the reports of the Four Hundred. I do not care to read about their coats of arms, their coaches and coquetry. I want to know what the brave, bright, gifted young men and women are doing and thinking about and striving for.

This talk about girls losing their femininity and unsexing themselves in industrial enterprises I think idle and senseless. The very word "unsex" is to me a misnomer, and if a woman becomes coarse and bold and rough in business, in the art world or in the industrial school she would not be a lady in a parlor or a gentlewoman in any condition. The decollete dress does not make a woman vulgar.

The girl who stands behind the counter to serve us and the one who stands behind the footlights to entertain us may have the same nobility of purpose and the same lofty principles as the one privileged to ill use and criticise her. It is barely possible that our ladies do go to Delmonico's for dinner or supper, that they are even reckless enough to sip a glass of wine, and at the same time be as intrinsically worthy and noble as the woman in quiet russet garments who views the scene from the other side of the window.

That our girls want training there is not a doubt, neither has the inability of some mothers been questioned. They don't want piano lessons unless there is an inborn love of music. The piano has been the ruination of more than one generation of women. Another fallacy is the hitherto universal tendency to direct all energies to marriage. In the south as soon as a daughter reached her young ladyhood the mother at once proceeded to refurnish the house.

The girl went to the hair dresser and had her tresses arranged in a dozen different ways to find out which would be the most becoming style; colors were tried against her pretty face to get "her color;" she took her beauty naps, and from every source, even the old servant, a hint "to be sweet."

In discussing a new acquaintance one heard that she was very "beautiful and clever and nice, but she was not pretty." Being what we called "pretty" was considered a superior virtue, and everything in the girl's training tended to this one characteristic.

The victim was being decked for the sacrifice, although the fond mother would never admit that she was busy at the art of matchmaking. Prepare a girl for the altar, for the duties of a wife and mother, before even a lover has presented himself? There is not only drollery to such a situation, but the tinge of indelicacy. I believe in giving the girl the advantages of good training and leaving her to decide whether she is better fitted for the inner or the outer world, for the home or the professional life.—Mrs. Gen. Pryor in New York World.

For rheumatism, take half a glassful of lemon juice for ten nights. Always take it when getting into bed at night. Wear flannel next to the skin, and in cold weather sleep in warm blankets.

A Dangerous Experiment.

Great Advertiser in New York)—Does Mr. Topnotch, the proprietor of The Daily Metropolitan, live here?

Servant—Yes, but he can't be seen today. He's very low from an awful shock.

"Eh! Ferryboat collision, railroad accident"—

"Worse nor that. Two days ago he hired an editor from the wild west, sir, and this morning the paper had something in that gave the poor master an awful shock. I didn't see it, but the doctor said it was an 'original idea,' whatever that is. I hope it ain't catchin'".—Omaha World.

Not Perpetual Motion.

Soulful Youth (languidly)—Do you sing "Forever and Forever?"

She (practically)—No, I stop for meals.—Life.

Two Ways for Sunday.

"Do you sell hand painted pictures here?" asked a lank woman, in an avenue picture gallery.

"Yes, ma'am, we do," said the obliging picture dealer, rolling his hands a la Lady Macbeth, "any particular style?"

"You bet! Particular style is just what I'm after. Some folks out our way bought a picture here that hung two ways for Sunday. That's the kind I want."

"Two ways for Sunday? I don't think I understand you, ma'am."

"You don't look as if you did. Well, when they fust got it they hung it up and it was the nicest picture of all out doors. You ever see a real hand painted land escape?"

"Yes."

"On Sunday they turned it up side down, and it was one of them foreign cathedral churches, with fourteen steeples and a religious atmosphere. Now, I want one just like it, for if them stuck up Poppers can have one, I can. Trot it out."

The picture dealer struck a compromise on one that represented a fine scene in winter, and an ice palace in summer, but he said it was a close call.—Detroit Free Press.

It Does Not Always Work.

Here are two stories of Maine sheriffs. The first was a little Aroostook man, and one day he went with a warrant to arrest a certain farmer. He found him in the field and made known his errand. "All right," said the farmer, a big burly fellow, "I'm ready," and with that he lay down at full length on the ground. "But you don't expect me to carry you, do you?" asked the sheriff. "Certainly; you must take my body, you know." "Will you wait till I get a team?" "Can't say," and the upshot was that the sheriff went back without his prisoner. The other sheriff was a Franklin county man, likewise small, but plucky. He was sent to arrest a notorious offender, a 200 pounder, and found him on the hillside. Grinning at the officer, he lay back on the grass, saying, "If you get me you'll have to take me." Quick as a wink the sheriff grabbed the fellow by his feet and started down hill with him as fast as he could go, and the bumping the big man got soon shook all the fun out of him and he begged to be allowed to walk quietly by the side of the sheriff.—New York Sun.

Worthy a Monument.

"Say, undertaker, I want to buy the finest coffin you have."

"Who's dead?"

"Old Aunt Eliza, the colored woman who lived south of town. She was over 115 years of age."

"How did she come to die?"

"Sickness and poverty."

"How is it that so fine a coffin is wanted?"

"Oh, the grateful neighbors contributed to it. You see she never claimed to have been a servant to George Washington."—Nebraska State Journal.

Punishing a Boy.

"Bobby," said his mother sternly, "you go into the back yard and stay there. I'll teach you to open the front gate without permission."

Bobby went into the back yard, and was so quiet and good that at the end of an hour his mother relented and told him that he could play on the sidewalk a little while if he wouldn't go into the street.

"Ma," he said, "can't I play in the back yard a little while longer?"—New York Sun.

In Great Luck.

Friend—Was your uncle's will satisfactory to you, Brown?

Brown—Perfectly so; I'm a lucky dog! He left his entire fortune to an insane asylum.

Friend—You mean that you are an unlucky dog.

Brown—No, I don't; the other relations are going to contest the will, and I'm to be the attorney.—Life.

Sound Logic.

Fogg, the eminent lawyer (who has a weakness for charging high fees), to nephew who has been speculating—What! you paid $2 for one rabbit, Bobby?

Bobby (seven years old)—Yes, sir.

Fogg—Why didn't you consult your uncle?

Bobby (who has heard of his uncle's fame)—Then it might have cost me $5.—The Idea.

Embarrassing.

Aunt Jane—Ugh! When I was your age, Matilda, ladies of rank and position didn't have their photographs exposed in the shop windows.

Matilda (always anxious to agree)—Of course not, Aunt Jane. I suppose photography wasn't invented then!—Punch.

The Lapse of Time.

"Barn dances are getting to be very fashionable in the western states," says an Indianapolis paper. This must be different from the old fashioned barn dance, where the tout ensemble was a muscular old man, a boy and strap.—New York World.

What Follows.

A hew and cry usually follow the small boy's acquisition of a pocketknife.—Binghamton Leader.

A HUMAN BLOODHOUND.

How the Savage Follows and finds his Victim.

THE CAMP FIRE'S DEADLY EVIDENCE.

A Graphic Account of an Almost Trackless Pursuit.

"Hist!"

A single Indian has been following the right hand bank of the Rio Pecos river where it trends to the angle of the Chico mountains, New Mexico.

Fort Sumner is 50 miles to the south, Santa Fe 100 to the north. It is a wild, weird country, with the staked plains sweeping right up to the water of the Pecos from the east, and the country to the west is forest, ravine, valley and desolation.

In a dip of the earth, and still further shielded by great bowlders, the Indian has found a few charred sticks and a handful of ashes—relics of a camp fire. He springs to the cover of a rock, and for a quarter of an hour nothing is seen or heard of him. Instinct taught him that—the same instinct that any wild animal has. By and by he carefully rises into view and steps forward to examine the ashes.

"Ugh!"

It rained three days before. The ashes are dry. The black sticks preserve their gloss. A twig broken from a bush is still bleeding. A bone in the ashes is broken to get at the marrow. This is Wednesday, and the hour is 10 o'clock in the forenoon. That fire was built Monday noon. The prints of a boot heel are numerous. It was a white man. The prints are exactly alike. There was but one man—scout, hunter or prospector. He was heading up the stream.

"Ugh!"

Everything is clear to the Indian in five minutes, and he picks up the trail. It is forty-six hours since that fire was lighted—at least forty-four since the white man left it behind. That is an old trail, but here is a human bloodhound. Nature has made him to endure heat, cold and fatigue as if he were an animal. He has the cunning of a fox, the ferocity of a panther and a vindictive persistency which nothing but death can discourage.

There is no trail—nothing which the keenest dog could follow. But the Indian glides forward like a shadow, looking only at the lay of the ground. A man who travels without fear takes the easiest road. A man who is not pursued travels slowly. To the right—to the left—over rocks—across rills—up hill—down hill—never flagging, no matter what the obstructions, and at the end of three hours he turns sharply to the left, penetrates the cedars for a few yards and comes to a halt before another camp fire. A branch among the ashes gives out a faint smoke. The ashes are still warm. The fire was built Monday night, and over its flame the white man cooked his Tuesday breakfast. This is Wednesday at 1 o'clock. The white man has been moving slowly.

Half an hour for rest and a bite to eat and the Indian moves forward again. Here and there as he flies along he sees a broken branch—the moss torn from a rock—the leaves disturbed—plenty of signs that some one has passed that way. The scent is too old for a bloodhound; neither panther nor wolf could read the signs. In three hours he has reached another camp fire. It was built near a spring bubbling out of the rocks, and water was thrown on the flames to quench them.

It was not thoroughly done, however. Fire clings to several sticks, and the earth under the ashes is warm. The fire was built Tuesday night. The white man left it about 8 o'clock this (Wednesday) morning. It is now 4 o'clock p. m. He is only eight hours ahead, and there are still three hours of daylight.

Has he traveled fast or leisurely? Is he a dozen miles away or only three or four? The question is answered before the Indian has pursued the trail half a mile. The white man has stopped to break off a piece of rock with his hammer. He is a prospector. He goes up this ravine half a mile and returns. He leaps this creek to examine the face of the cliff—passes an hour or more inspecting the sand and gravel in the bed of the creek. It is a locality of promise. There is no hurry.

"Ugh!"

It is twilight in the forest—night in the canyons and gorges. The Indian has no trail to follow, but there is an instinct which leads him on. He knows he is close on the quarry. He moves swiftly but stealthily. There are rocks and bushes and limbs and vines and pitfalls, but he seems to see them in the darkness as well as in the light. The flame of a camp fire has caught his eye.

A man clothed in the course garments of a miner sits with his back to a rock. On the fire at his feet his meat is toasting and his coffee is boiling. The silence about him is that of the grave. His surroundings are bowlders, cliffs, ledges, ravines, trees. It is a wild, weird spot. Nature was in a vindictive mood when she made it. One sitting here alone at high noon would feel a chill of loneliness. The man looks into the fire. For a moment his thoughts are elsewhere. Of a sudden that mysterious something, that current which passes between life and death, electrifies him, and with his gaze riveted into the darkness beyond the fire he springs to his feet.

Too late! The Indian is not thirty feet away, but before he can lay a hand on the body life has departed. When a bullet strikes the human heart life is measured by seconds and fractions of seconds.—Detroit Free Press.

An old piece of zinc is the best thing that there is with which to mark trees in an orchard. Make this six or eight inches long, tapering at the end, and write on it with a common lead pencil. The writing grows more distinct year by year. This label can have the tapering end wound around the trunk or a branch and loosened as it grows.

A Hero of Antietam.

At the terribly hard fought battle of Sharpsburg (Antietam) Paul Conrad was desperately wounded, receiving a canister shot in the left shoulder which scraped every rib in his body. The ball entered just above the point of the shoulder blade and passed perpendicularly down the back to the waist, where it was found and cut out by the surgeons, but not until eighteen hours had passed after the wound was received. Though the ball weighed not more than ten ounces, Mr. Conrad said that after several hours had passed he felt as if he had a ten-pound ball, a cannon and carriage in his back, so great was the shock to his system. Upon his recovery from his wound, he rejoined his battalion and served gallantly to the end of the war participating in all the great battles with the Army of Northern Virginia.

Born in New Orleans, in the year 1843, he entered the Confederate army soon after attaining to manhood and his record as a soldier was as enviable and gallant as that of any of Louisiana's sons who wore the gray. He served with distinction to the end of the war. He was a member of Capt. Henry St. Paul Chasseurs a Pied, a part of the Army of Northern Virginia, and is one of but a few of the survivors of that famous command. The company left New Orleans April 22, 1861, for Pensacola. Thence they went to Virginia, and other companies being attached, St. Paul's Battalion was formed. Their first big fight was at Seven Pines, where more than half the command were killed or wounded—among the former being young Bourges, Conrad's first cousin.

He is and always has been strictly speaking a man of the people. Of a genial and pleasant disposition and possessing rare business qualifications he is eminently fitted to fill the responsible position to which he has been elected. He is an honest, upright and faithful business man, whose word is as good as his bond.

The Board of directors of The Louisiana State Lottery Company have elected Mr. Paul Conrad president, vice Dr. M. A. Dauphin, deceased.

Mr. Conrad has practically managed the affairs of this great corporation for the past five or six years. He has been an attache of the company in various capacities since 1870, and has earned the good will, confidence and respect of all with whom he has come in contact.—*Mobile Register.*

Chestnuts in France.

Chestnut trees are very abundant in the southern parts of Europe, and the fruit is one of the principal articles of food among the poor. This is true not only in France, but in Spain, Italy, Switzerland and Germany. In Italy the kernels are ground, and the meal is used for thickening soups and even for bread. The authors of "Our Home in Aveyron" were struck with the importance of this crop.

"Ah, mademoiselle, it is quite a boon when the chestnuts are in season," remarked a friend one day. So it is, for they help very much in the composition of fresh dishes for the table. They are, of themselves, cooked in about fifteen different ways, and very delicious some of the dishes are.

More important is the fact that chestnuts are really the principal food of the inhabitants where the tree abounds. So state the government statistics, but this refers of course to the peasantry pure and simple, who, however, form the vast majority of the inhabitants.

In the month of October the chestnut harvest begins. Before and after school hours the grave children troop to the woods to pick up the fallen fruit. They carry empty sacks to the hilltops, gathering the fruit and filling the sacks as they descend.

Each sack becomes too heavy for the children to carry, and is dragged about by two or three until it is full. They do not attempt to carry the sacks home, but are met by some grown up relative, who relieves them of their burden.

The animals get their share of the fruit, and a peasant woman will sit for an hour or two in front of her door leisurely cutting up chestnuts into little bits for her small stock of poultry, which fight and scramble for the tidbits she throws to them.—Youth's Companion.

Always a Deeper Depth.

"I boarded a Third avenue car at Forty-second street, in New York, the other day," said a Pittsburg financier, "and stood on the front platform furtively smoking a cigar. We'd gone a block or two when a voice I knew somewhat said, 'Well, Fred, how are you?' I turned and looked about me. There was nobody on the platform but the driver, and he was looking at his horses, apparently not minding me at all. I was still wondering where the voice had come from when the driver looked me full in the face and said, 'You don't know me, do you?'

"I confessed I didn't, although I added, 'Your voice is familiar.'

"'It ought to be,' he said, 'for I've talked to you by the hour. I'm Bill ——,' and he mentioned a name that used to be pretty familiar in some Pittsburg circles, and especially among sports. The last time I had seen him he wore four big diamonds in his shirt front—which was usually soiled—and was reported to have made a tidy sum in the show business—circuses, prize fights and the like, for Bill was not particular. I asked him how he came to be driving a street car, and all he would answer me was 'Hard luck.'

"I had to get off at the next corner, but I told him where I was stopping and asked him to call. He didn't—too proud, I guess, for though his diamonds were gone his nerve seemed to have staid by him.—Pittsburg Dispatch.

An Ancient Church Bell.

The Methodists of Lumpkin, Ga., have a new church bell, the old one being cracked and worn out. It's time the old bell had a rest, for it was cast in 1600, and has in its time summoned to worship men of varying creeds in the Netherlands, Portugal, Spain and America.

Detailed Instructions.

New Girl—An' how long should I leave this thing called a "blower" tight up agin the open fireplace?

Experienced Servant—Lave it until it do be hot enough to burn the skin off y'r fingers when ye touch it. Thin lift it off.—Philadelphia Record.

A MODEL'S EXPERIENCE.

A Woman who has Posed for Famous Artists.

SHE PREFERS TO POSE AS VENUS.

Many Women's Heads Painted on her Shoulders.

A homely visaged, well formed Italian woman, about 35 years of age, occupies a suit of rooms on Greene street, and gets a living by doing fancy needle work and taking lodgers. Her name is Margharita Campelli. Her husband, formerly a tenor singer, but latterly an organ grinder, died two years ago, leaving her his name and just enough money to buy a black veil. As for his burial, that was paid by the city. But Margharita was not to be cast down. She had seen better days. She would see them again. The result is that she is now comfortably situated, and is growing more prosperous every year.

Years ago, before time cross plowed her face with wrinkles, Margharita was the pride of Paris, and earned a luxurious living by posing as a model for sculptors and painters. She was able to earn anywhere from 100 to 500 francs a week "on her shape" alone, and on her rounded shoulders and above her well molded limbs rest the faces of some of the most celebrated belles and heiresses, and, for that matter, queens and princesses of Europe. In short, her body was the form in which the celebrated Parisian artists breathed the breath of life and beauty, and having done this, they surmounted the trunk with the heads of their patrons, all of whom were pleased to be associated with her symmetry, which none of them possessed.

THREE DOZEN MADONNAS.

When a reporter called she was engaged in the agreeable occupation of washing the dinner dishes, but, although attired in a simple "Mother Hubbard" satine wrapper, the "human form divine" which she possessed was so very apparent that it was quite evident the artists had made no mistake in their selection.

"I don't look much like a Madonna, do I?" was her smiling greeting as she stuck out a wet hand for the reporter to grasp. "I think I am more nearly akin to Venus rising from the sea just now, and I have sat for both many a day."

"Which do you like the better, Venus or the Madonna?" asked the reporter.

"Oh, Venus, to be sure, though Madonna posings paid me better; but they were too stiff. I don't like standing all the forenoon on a marble slab holding a 'dummy' baby to my breast. It makes my arms ache. I was never lucky enough to be a mother, and this fondling of infants comes hard. Still, I did pretty well. I have been the model for at least three dozen Madonnas in my day. Six of them are now in Rome. Nearly twenty are still in France, and the rest have gone to England and America. Last year I saw myself in three different attitudes in as many paintings at a 'loan exhibit' in New York. I was told the cost of those three pictures was $20,000. I wish I had the money, but I am no artist. I am only a model. Still, I like to know that the rich people admire me, even if they do not know who I am."

"Now tell me about the Venus," said the reporter.

"Ah! but that was gay. I liked to be Venus. I acted natural, you see. I just sat down and threw out my arms and gave myself up to love. One artist paid me 500 francs for six days' sitting for Venus. One hundred dollars! Just think of it! It was the easiest money I ever earned. But he got 40,000 francs for the job, so he need not complain."

"Have you been a model for anything but Madonnas and Venuses?" was asked.

WELL LOADED SHOULDERS.

"Yes, indeed. Let me tell you. I went to Paris in 1873 and danced in a theatre. Daytimes I sat as a model for at least twenty artists, and had my figure painted in all kinds of postures and attitudes. I was Proserpine in two pictures, Helen of Troy in five, Œnone in two, Hecuba in three, Rachel in one, Minerva in four, Andromeda in one, and so on through all the list of celebrated historical, biblical and mythologic characters. I worked as a model and got good pay until 1884, when I was married, and my husband objected to my getting a living that way."

"What was your husband's occupation?"

"He was a musician."

"How long ago did he die?"

"Last year. He heard there was a big field for musicians in America, and came over, hoping to make a fortune. His failure broke his heart. Since his death I have tried to get work as a model here, but your artists do not seem to care for me. I am afraid I am getting old and embonpoint."

"How many faces are now on your shoulders, do you suppose?' was asked.

"Over 300. It is somewhere near 400, if I remember rightly. There are three of the Rothschild women, Mrs. Mackay, Judie and the ex-Empress Victoria of Germany among them. Bernhardt wanted me to act as a model for her pictures, but the artist convinced her that she was too skinny. Sarah Bernhardt is a beautiful woman for all that, and just as liberal as sunlight."

"Did you ever act as a model for an American woman?"

"Yes, five or six in all. Mr. Bennett brought a woman to Palero's studio while I was a model. I think her name was Bell, and she was a sister or relative of Mr. Bennett. I also sat as a model for a relative of Minister Bancroft when he was in Germany."

"Anybody else?"

"I remember a few more, but the names are gone. The Americans who go to Paris to get their portraits made do not patronize the best artists as a rule, though they pay big prices. It is shameful how you people are deceived by cheap artists. They have plenty of money, and should get the best. The fact is, they are imposed upon by cheap work." She chatted pleasantly about French art for a few minutes longer and then resumed her household duties.—Boston Cor. Globe-Democrat.

A Bad Streak of Luck.

Philadelphia Doctor (despondently)—Just my luck. I have only recently succeeded in becoming the regular family physician of the Westends, and now they have taken steps to render further employment of a doctor unnecessary, or nearly so.

Wife—Why, my dear, what have they done?

"They have bought a filter."—Philadelphia Record.

Got There Too Late.

A citizen yesterday stood on the steps of a Griswold street bank gazing at something across the street. While thus occupied a pedestrian halted, ascended a step or two, and after taking off his hat, said:

"Being, you know, as I haven't had anything to eat for two days, I didn't know but you could spare me a dime."

The citizen did not lower his eyes by an inch.

"Presume the cashier gave you all bills, you know," continued the man, "but if you'd be pleased to hunt around in your pockets I've no doubt you'd find a dime."

Not a sign that he was heard or seen.

"I would take it as a great favor, I assure you. Purty tough, you know, to tackle a job on an empty stomach. I've got $50 worth of work waiting for me as soon as I can get a meal."

And yet no sign.

"It's only a loan, you know. A loan to be returned to-morrow. I hate to ask it, Colonel, but there's no other way for me. If you should happen to have a quarter it would be all the same—a loan."

The colonel seemed hewn out of marble.

"Hope you'll excuse me," continued the man, "but I happened to see you as I passed. There's no particular hurry, you know, but the sooner I get the money the sooner I can fill up and go to work."

The colonel now made a move to raise his umbrella.

"The cashier would doubtless change a bill for you if you are broke for silver. This is a fine rain, colonel! Things must be looking nice in the country! Make it a half, colonel, and I'll be around Saturday."

The colonel descended the steps as rigid as a poker.

"I'll take your address," said the man as he followed behind, "because I'm very particular about paying borrowed money. I might telegraph to my brother in Buffalo, but he might not be at home, you know. Now, colonel, if you would be so kind as to hand me out"——

The colonel joined the procession and disappeared. After looking up and down the street for a minute the tramp said:

"I might as well quit right here. Some one has worked this town before on my patent racket, and he didn't even leave a good name behind."—Detroit Free Press.

Wonders of Progress.

Returned Prodigal (in Vermont)—I used to live here, but everything is so changed I can't find my way. Can you direct me to Bullfrog Hollow, Mud Pond or Skeeter Swamp? If I can get to any one of them I can strike the old road to the farm.

Native—It's a lucky thing you met me, for hardly any one knows them places by the old names. Your Daddy Doodles boy, ain't you?

"Yes."

"The old man'll be glad to see ye. He's sold most o' the farm to the city folks and is livin' on his money, but he's in the old house yet. Just you follow this bridal path to Prospect Terrace, then go around Crystal lake to the Garden of the Gods an' you'll strike the road leading past the Palisades Summer hotel. Just throw a handkerchief over your face when ye enter the Garden of the Gods. That uster be Skeeter Swamp."—Omaha World.

A Suggestion.

Fond Wife—Dear, I am to be present at the Simmons fancy dress party. It's a sort of a masquerade, you see, and I don't know what on earth to wear.

Horrid Man—Why couldn't you put your hair up in three Psyche knots and go as a hat rack?—Pittsburg Bulletin.

Better Than Ether.

Surgeon—Now, my man, I am about to amputate your foot.

"Well, go ahead."

"I would advise you to submit to being placed under the influence of an anæsthetic."

"Hang your anæsthetic! But I'll tell you what I wish you would do."

"Well?"

"Have somebody bring me the score of the ball game by innings while you're at work."—Nebraska State Journal.

A Wise Youth.

Big Sister—Bobby, you are wanted to do an errand.

Bobby—Tell ma I haven't got time to do it now.

Big Sister—Father says you must do it at once.

Bobby—Oh, it's for pa, is it. Then I guess I had better find time.—The Epoch.

A Strange Combination.

A man in Wisconsin some time ago wrote to The Tribune on stationery, the printed heading of which proclaimed him to be a "dealer in stoves and dinner bells;" but this curious combination is eclipsed by the Connecticut man who is announced as a "dealer in oysters, clams and gent's furnishing goods."—New York Tribune.

Strange.

"This is very strange," remarked Billy Bliven, thoughtfully after he had tasted the contents of the butter dish. "Very strange, indeed."

"What is strange?"

"That such delicate, pale butter should turn out to be so robust."—Merchant Traveler.

No Broken Lots Taken.

Citizen—Officer, I've had my watch stolen.

Policeman—A gold one?

Citizen—No, a Waterbury.

Policeman—Well, just stand here a moment, and the thief will come back after the suit of clothes.—New York Sun.

Ha! Ha!

"Why is Sunday put at the head of the Allegheny battery list?" asked the snake editor.

"Don't know," replied the horse editor.

"Because he is the first of the week."—Pittsburg Chronicle.

The Proper Action.

Medical Professor (to students)—In a case which you find difficult to diagnose correctly, what is the proper course to take?

Student—Look wise and say nothing.—The Epoch.

THE PATE DE FOIE GRAS.

History of the Favorite Dish of the French.

DEATH OF ITS GREATEST MAKER.

How the Goose Livers are Made Fat.—Story of Dumas.

At Colmar, in Alsace, died in his 71st year a worthy bourgeois named Jean Mangold, who, in the opinion of all save some members of the medical profession, deserved well, not only of his own country, but of the whole world. Colmar, the antique Columbaria of the Romans, next to Strasburg, is unsurpassed for the fabrication of "pates de foie gras." The friends of the late M. Mangold, indeed, who was for many years the leading pastry cook at Colmar, claim that his pies were even superior to those made at Strasburg. M. Mangold was a poet to boot, and composed a large number of local idyls, satires, vaudevilles and songs for music. But it will be with his pies, and not with his poems in his hand that he will probably go down to postesity.

It might be desirable in the outset to stigmatize as wholly apocryphal the story to which Alexandre Dumas the elder, in his "Dictionnaire de Cuisine," has given currency as to the horrible tortures inflicted on the Alsatian geese in order to fatten their livers to the degree required by the pastry cooks. Starting with the postulate that the liver of the bird can only be fattened by the tumefaction of that organ, and that for pie making purposes the goose livers should be ten or twelve times the normal size, the author of "Monte Cristo" goes on to say that the wretched bipeds are nailed by their web feet to boards, that their eyes are put out, and that they are incessantly stuffed with pounded nuts and deprived of water.

STUFFING THE LIVE BIRDS.

Another alarmist, improving on Alexandre Dumas, asserts that the nailed down geese are placed before a raging fire and allowed to drink as much water as they like, thus leading to enlargement of the liver. As a matter of fact, the birds, like capons and turkeys, are no doubt systematically crammed, usually with a paste made of Indian corn and millet; but there is no more truth in the wild stories of the nailed down feet, the blinding and the semi-roasting in front of an ardent fire than there is in the tales that turtle soup is made of conger eel and the sauce called soy from cockroaches.

Toulouse, in the south of France, Ruffec, in the Charente and Nerac, in the Bordelais, have in modern times, rivaled Strasburg and Colmar in the making of "pates de foie gras;" and there are culinary antiquaries who maintain that pasties of fatted goose livers are a Gallo-Roman survival of Apician origin. The mode of fattening the geese was somewhat cruel. The birds were cooped in solitary confinement in very narrow cages; three times a day they were gorged with maize, and, on the twenty-second day of cramming, a spoonful of poppy oil was added to the corn; water was freely given them, but it was always mixed with sweet wort from the brewery. At the end of forty-two days the goose became so fat as to be in danger of suffocation and was therefore killed. Its proper weight should then be about sixteen pounds, out of which the liver should weigh thirty-two ounces. Another quicker but more equivocal way of fattening the geese was to mix antimony with the farinaceous paste with which the birds were crammed.

HOW TO MAKE THE PIE.

At Strasburg the construction of a pate is a serious and even solemn affair. Six fattened livers are the ordinary pabulum for a pie; they must first be washed in many waters and then parboiled, and are next scrupulously trimmed so as to free them from all fibrous substance and from any matter approaching bitterness in flavor. Each liver is then cut in two, and, out of the dozen, three are chosen to be beaten in a mortar and passed through a sieve with bacon, shalots, parsley and mushrooms, so as to make a "farce," or forcemeat, which is boiled, and forms the basis of the pie. The other half livers are then larded with the finest Perigord truffles, cut in the shape of dice, and the contents of the pie are made to consist of layers of liver, truffles and forcemeat. Two hours are sufficient to bake this dainty dish, fit to be set before a whole congress of kings and emperors. When the pie is withdrawn from the oven the top crust should be delicately lifted and a large glass of Madeira poured into the interior. Then it should be hermetically closed, so as to be fit to be at once packed and dispatched to the uttermost ends of the earth.

It remains, however, to show how these famous pies came to be made at Strasburg and Colmar at all. Only 100 years have elapsed since the French military governor of the province of Alsace, Marshal de Contades, brought with him to Strasburg as cook a Norman by the name of Close. Alsace was already remarkable for it "terrines" of fat goose livers, which were preserved in earthen pipkins with a layer of clarified butter under the cover. They were somewhat rudely prepared, and lacked one supreme accessory. The artistic Close practically exclaimed, "Pipkin, thou shalt become a pie!" He discarded the earthen jar and imprisoned the rich livers in a casket of pie crust. "The body is there," continued the enthusiastic chef, "we must now give it a soul;" and he found a spiritual element for his pie in the exciting perfume of the Perigordian truffle. Close, the Norman, must assuredly be considered as the inventor of the Strasburg pie.—London Daily News.

The Swedish bride seeks to catch a glimpse of the groom before he sees her, hoping thereby to gain the future mastery. She also places her foot before his while the ceremony is being performed, and sits down first. While the words are being said she stands near the groom, so that in the future no one will come between them.

The washing of the leaves of plants is very essential to their health; if they are very dusty a little soap may be used in the water, which should be milk warm. They should be handled very daintily; a soft sponge is best for this purpose. Once a month the branches and stems of hardwood plants should also be washed.

Heartburn may be relieved almost instantly if half a teaspoonful of table salt be dissolved in a wineglassful of cold water and then drank.

FRIDAY APRIL 10 ..... 1891.

The expectation is that in the course of time the price of refined sugar will depreciate nearly to the extent of the duty that has been taken off. But the cheapening process will be slower on the Pacific Coast than on the Atlantic. On this side we depend for refined sugar upon two local refineries. There does not seem at present anything to prevent the local refineries from charging above the old rates. There are no sugar refineries to the west of us that can supply our market. There is a railroad company which might bring sugar from the East at an ordinary cost of transportation, but that railroad company has apparently formed a combination with the refiners to keep the price up. It is a little singular that when an opportunity is offered the Southern Pacific Railroad Company to do the people of this coast a service it fails to accept it. The agreement of the two refineries to keep sugar up to the old mark have had but temporary effect if the railroad had kept rates on west-bound sugar at the old rates. The refiners might have added to the Eastern profit the cost of transportation, but the action of the Southern Pacific Company in advancing the freight tariff on sugar from $1.20 to $2 per hundred pounds enables them to keep prices nearly or quite at the old figure. The Spreckels Refinery, the American Refinery and the Southern Pacific Railroad Company will, for a time at least, divide among them the amount that in the old time was paid into the United States Treasury. A sugar dealer who was interviewed Wednesday by a CALL reporter thinks a competing railroad would straighten out the sugar tangle. A competing railroad would. But when there are two or three railroads they do not always compete. In the sugar case, if there were a second railroad there would, in all probability, be four parties to the sugar combination instead of three. If the two refineries can combine, why might not two railroad companies? The remedy lies in the cultivation of beet sugar. Beet sugar mills should be erected in all parts of the State. The present outlook is that there is as much profit in beet sugar as there is in fruit.

So far as danger of actual war is concerned it may be considered past. The Italian Government did not mean all its words implied. It discovered in a short time that it had no real cause of offence and that it had no means of making its protests effective if it had cause of offense. Making war at long range is costly work. The Italians have some powerful war vessels in their own waters, but the most powerful of them would hardly be sent across the Atlantic. But the little glimpse of war we have been treated to will revive our national feeling. The telegram of the ex-Confederate Social and Benevolent Association of Kansas City is only one of a thousand similar responses that would have reached Washington if the war cloud had become a little darker. While no part of the country wants war there is little doubt but that the rising generation in the Southern States would eagerly improve an opportunity to fight for the Union. The Americanism of both parties will be toned up. The rights of foreign born citizens will not be abridged, but in the future the genuineness of their vows of allegiance will be submitted to practical tests. The Italian Americans who appealed to their native country have taught the American people the value of caution.

CROCKERS' HOTEL.
BIG PINE - CAL.

New House.
New Furniture.
Low Rates

Splendid hunting and fishing near by, in act, it is a veritable paradise for tourists and pleasure seekers.

Special attention given to the wants of every guest.

Independence, Inyo Co. Cal

Removing Motes from the Eye.

The following is a simple and expeditious way of removing specks from the eye. The only instrument needed is a wooden toothpick or match, made sharp at the point. Hard wood, however, is preferable. The sufferer stands in a good light and rests his body and head against a door, post or some fixed object. With the thumb and a finger the operator holds the eyelids sufficiently apart to see plainly the front of the eye and also to prevent winking. If the speck be on the cornea it may be difficult to see it, and it can then only be found by changing the direction of sight until a favorable position is secured.

The most difficult part of the business is to have the inexperienced person fix the sight on some object and hold the eye perfectly quiet. If this can be done only for a few seconds the operator approaches the mote with the point of the stick, still holding the eyelid, and with gentle passes and gradual advances soon touches the speck and brings it away. The transparency of the eye makes it necessary to approach the surface with care, or it will be reached before it is expected. If the mote be hidden underneath the upper eyelid the eyelash should be gently raised, while the upper part of the lid is held downward with the stick. When turned the stick is withdrawn and the lid is held in this position by the eyelash.

Where iron is worked particles of metal are sometimes allowed to remain in the eye for several hours, when they seem to rust fast and cannot be removed by a stick. In such cases the point of a penknife blade, made quite sharp, is used, and if it is magnetized so much the better.—New York Commercial Advertiser.

Dear at the Price.

A change of mind has often occurred after the marriage bans have been published. A clergyman tells recently of a man having put in the bans, and after they had been twice published asked if he might substitute the name of another girl for the one first entered, adding by way of explanation: "I think she will suit me better in the long run." On being told that the change could not be effected unless the first bans were withdrawn, others substituted and the fees paid a second time, also that the full interval, including three Sundays, must elapse before the marriage could be celebrated, the man hesitated. "Do you mean to say that I should have to begin all over again?" he asked. "Certainly," was the reply; "the bans must be published three times in the names of the persons who are actually to be married." "And must I pay all over again if I have the other girl?" "Yes," said the clergyman. "Well, I call that too bad."

The candidate for matrimony remained for some moments in a brown study, then broke out with: "Then I'll stick to the first girl. I'm not going to pay twice over for anybody." He was married during the following week in accordance with this decision, evidently considering the proposed subsititution would be too dear at the price of double fees. This did not say much for No. 2, as would be bridegrooms are usually of all people most inclined to be liberal.—Ladies' Treasury.

A Simple Dog Story.

An exchange tells of the peculiar appetite of a dog owned by a Butte City merchant, whose latest exploit was to swallow a diamond stud, lunch on a roll of greenbacks, and, by way of a dessert, thoughtfully masticated a pair of British half hose. Evidently this is no ornery purp, still for marked epicurean eccentricities it cannot compare with a saffron-hued bird dog we once owned. This thoroughbred animal developed delicate tastes quite early in life.
